Food Code

2001 Recommendations of the United States Public Health Service Food and Drug Administration

The Food Code is a model for safeguarding public health and ensuring food is unadulterated and honestly presented when offered to the consumer. It represents FDA's best advice for a uniform system of provisions that address the safety and protection of food offered at retail and in food service.

This model is offered for adoption by local, state, and federal governmental jurisdictions for administration by the various departments, agencies, bureaus, divisions, and other units within each jurisdiction that have been delegated compliance responsibilities for food service, retail food stores, or food vending operations. Alternatives that offer an equivalent level of public health protection to ensure that food at retail and foodservice is safe are recognized in this model.

This guidance represents FDA's current thinking on safeguarding public health and ensuring food is unadulterated and honestly presented when offered to the consumer. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. This guidance is being issued in accordance with FDA's Good Guidance Practices regulation (21 CFR 10.115; 65 FR 56468; September 19, 2000).

For public sale by:

U.S. Department of Commerce Technology Administration National Technical Information Service 5285 Port Royal Road, Springfield, VA 22161 (703) 605-6000, refer to report number PB 2002100819
