

Annual Report 2000

Environmental Dynamics and Simulation

July 2001

**Pacific Northwest
National Laboratory**

Operated by Battelle for the
U.S. Department of Energy

Cover Photo: An electron micrograph of a 1-micrometer-thick, nanoporous MgO film, demonstrating the effect of material synthesis using a molecular beam at a high angle of incidence. The beam impinges from the right at an incidence angle of 85°, forming a film consisting of an array of highly oriented, predominantly independent, columnar filaments tethered to the underlying substrate. The shadowing effect (the two areas where the MgO filaments are not observed) is due to small specs of dust on the substrate that act to block the deposition.

CS&D researchers speculate that the largely independent filaments are responsible for the film's high-temperature stability and will facilitate transport of reagents within the film. Additionally, low energy electron diffraction and x-ray diffraction analyses reveal that the films are crystalline. These properties make the nanoporous MgO films good candidates for further studies in heterogeneous catalysis. Precise control of the composition and structure of nanoporous materials can lead to a more fundamental understanding of reactions that occur in restricted geometries, as well as to the design and synthesis of better materials for chemical applications.

Annual Report 2000

Environmental Dynamics and Simulation

John M. Zachara, Associate Director
and the Staff of the Environmental Dynamics and
Simulation Program

July 2001

Prepared for the U.S. Department of Energy
under Contract DE-AC06-76RL01830

Contents

1. Introduction

Environmental Dynamics and Simulation Program 1-3

2. Biogeochemistry and Geochemistry

Dissolution of Fe(III)-Oxides by Dissimilatory Metal Reducing Bacteria: Evidence for a Non-Local Iron Acquisition Strategy
K. M. Rosso, J. M. Zachara, J. K. Fredrickson, and S. C. Smith 2-1

Kinetics of Bacterial Reduction of Goethite by *Shewanella putrefaciens* Strain CN32
C. Liu, S. Kota, J. M. Zachara, J. K. Fredrickson, and C. K. Brinkman 2-4

Dissimilatory Bacterial Reduction of Al-Substituted Goethite in Subsurface Sediments
R. K. Kukkadapu, J. M. Zachara, S. C. Smith, J. K. Fredrickson, and C. Liu 2-7

Bacterial Iron-Reducing Membrane Vesicles: A Potential Source of Biogenic Nanofossils
Y. Gorby, J. McLean, A. Dohnalkova, A. Korenevskiy, K. Rosso, and T. Beveridge 2-9

Iron Sulfides and Sulfur Species Produced at (001) Hematite Surfaces in the Presence of Sulfate-Reducing Bacteria
A. L. Neal, S. Techkarnjanaru, A. Dohnalkova, D. McCready, B. M. Peyton, and G. G. Geesey 2-11

Interactions of Sulfate-Reducing Bacteria with Mineral Surfaces
J. E. Amonette, C. K. Russell, S. M. Heald, K. A. Carosino, N. L. Robinson, J. T. Ho 2-13

Uncertainties of Enzymatic Kinetic Parameters Estimated from Batch Experiments
C. Liu and J. M. Zachara 2-15

Role of Mn(III) Oxidation of Soil Organic Matter
C. J. Matocha,^(a) D. L. Sparks,^(b) R. K. Kukkadapu, and J. E. Amonette 2-17

Chemistry of Mineral Fe(II)
J. E. Amonette, Y. A. Gorby, D. J. Workman, D. W. Kennedy, and J. S. Fruchter^(a) 2-19

Understanding Actinide Oxidation/Reduction Reactions in the WIPP Repository
A. R. Felmy, Z. Wang, M. J. Mason, R. K. Kukkadapu, R. C. Moore, D. Rai 2-21

The Role of Clay Minerals During Diagenesis in the Evolution of Copper, Nickel, and Vanadyl Geoporphyryns
N. S. Foster-Mills, J. W. Day, A. Alford, and D. Rogers 2-22

Desorption of ¹³⁷Cs from Hanford Sediments Contaminated With High Level Waste
J. M. Zachara, J. P. McKinley, C. C. Ainsworth, S. C. Smith, and C. Liu 2-24

3. Spectroscopy

Time-Resolved Fluorescence Spectroscopy and Microscopic Study of Eu(III) Uptake by Oat Root In Vivo
Z. Wang, R. J. Fellows and C. C. Ainsworth^(b) 3-1

Detection of Trace Levels of Water in Oil by Photoacoustic Spectroscopy
N. S. Foster-Mills, J. E. Amonette, and T. Autrey 3-3

A Fluorescence Spectroscopic Study of Gadolinium-Doped Borosilicate Glasses
Z. Wang, L. Li, H. Li, A. G. Joly, and D. M. Strachan 3-5

Study of the Infrared Spectra of Phyllosilicates Through Direct Measurements, Quantum Mechanical Modeling, and Analysis of AVIRIS Imaging Spectrometer Data: Relationships with Environment of Mineralization
S. E. Martinez Alonso and J. R. Rustad..... 3-8

Commissioning and Operation of the PNC-CAT Beamlines at the APS
S. M. Heald, D. L. Brewster, J. O. Cross, R. Gordon, E. D. Crozier, G. Seidler, and E. A. Stern..... 3-9

4. Modeling and Simulation

The Cs/K Exchange in Muscovite Interlayers: Development of Molecular Modeling Approaches
K. M. Rosso, J. R. Rustad, and E. J. Bylaska 4-1

Parallel Projector Augmented-Wave Code
M. Valiev, J. H. Weare, and E. J. Bylaska 4-4

Mixed Hamiltonian (PW/MM) Methods for Geochemical Electronic Structure Studies
E. J. Bylaska, J. R. Rustad, and M. Dupuis..... 4-6

5. Appendix

Environmental Dynamics and Simulation Staff..... 5-1

Office Operations..... 5-3

Matrixed Staff..... 5-3

Postdoctoral Fellows..... 5-3

Students 5-3

Publications and Presentations 2000..... 5-3

Publications..... 5-3

Presentations 5-5

Patents 5-7

Awards/Recognition 5-7

Acronyms..... 5-8

Where ED&S Fits in PNNL 5-9
