## DIATOMITE

(Data in thousand metric tons, unless otherwise noted)
Domestic Production and Use: The estimated value of processed diatomite, f.o.b. plant, was \$182 million in 1999. Production was from 7 companies with 12 processing facilities in 4 States. Three companies produced more than $75 \%$ of the total. California and Nevada were the principal producing States. Estimated end uses of diatomite were filter aids, $64 \%$; absorbents, $14 \%$; fillers, $12 \%$; and other (mostly cement manufacture), $10 \%$.

Free.

Depletion Allowance: 15\% (Domestic and foreign).
Government Stockpile: None.

## DIATOMITE

Events, Trends, and Issues: Filtration (including for beer, wine, liquors, oils, and greases) continued to be the largest end use for diatomite, also known as diatomaceous earth (D.E.). Another application is for microbial contaminants such as bacteria, viruses, and protozoa in public water systems. A U.S. company in conjunction with an international association commissioned a test project using D.E. filtration and achieved very significant results in reduction of cryptosporidium. D.E. filter aids have been successfully deployed in over 200 locations throughout the United States for the treatment of potable water.

World Mine Production, Reserves, and Reserve Base:

| Mine production |  | Reserves ${ }^{4}$ | Reserve base ${ }^{4}$ |

World Resources: World resources of crude diatomite are adequate for the foreseeable future, but the need for diatomite to be near markets encourages development of new sources for the material.

Substitutes: Many materials can be substituted for diatomite. However, the unique properties of diatomite assure its continuing use for many applications. Expanded perlite and silica sand compete for filtration purposes. Other filtration technologies use ceramic, polymeric, or carbon membrane. Alternate filler materials include talc, ground silica sand, ground mica, clay, perlite, vermiculite, and ground limestone. For thermal insulation, materials such as various clays and special brick, mineral wool, expanded perlite, and exfoliated vermiculite can be used.
