# A Profile of the Working Poor, 2002 

U.S. Department of Labor<br>Bureau of Labor Statistics<br>September 2004

## Report 976

In 2002, 34.6 million persons, or 12.1 percent of the population, lived at or below the official poverty level- 1.7 million more than in 2001. Most of the poor were children, or adults who did not participate in the labor force during the year. Yet some 7.4 million were classified as the "working poor," about 560,000 higher than in 2001. The working poor are those who spent at least 27 weeks in the labor forceworking or looking for work-but whose incomes fell below the official poverty level. Of all persons who worked 27 weeks or more, 5.3 percent were classified among the working poor in 2002, up by 0.4 percentage point from the previous year. The poverty rate for those who worked 27 weeks or more increased from its recent low of 4.7 percent in 2000 to 5.3 percent in 2002; however, it was still below the series peak of 6.7 percent in 1993. (See tables A and 1, and chart 1.)

Additional highlights from the 2002 data include:

- Among persons in the labor force for 27 weeks or more in 2002, 3.8 percent of those usually employed full time were classified as working poor, compared with 10.9 percent of part-time workers.
- Although working full time substantially lowers a person's probability of being poor, nearly 2 in 3 of the working poor who worked during 2002 usually worked full time.
- In 2002, 7.6 percent of the working poor actively searched for a job for more than 6 months without finding any work, up from 5.6 percent in 2001 and 4.7 percent in 2000.

This report presents data on the relationship between labor force activity and poverty in 2002 for workers and their families. The specific income thresholds used to determine persons' poverty status differ, depending on whether the individuals are living with family members or are living alone or with nonrelatives. For those living with family members, the poverty threshold is determined by their family's total income; for persons not living in families, their personal income is used as the determinant. Thus, for persons living in family situations, earnings from their employment are only one factor in their poverty status. Other important factors include the earnings of others in the family, other sources of income that family members might have, and the size of the family.

The data were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey. For a more detailed description of the source of the data and an explanation of the concepts and definitions used in this report, see the Technical Note.

## Demographic characteristics

In 2002, the proportion of those who were in the labor force for 27 weeks or more who were classified as working poor continued to be higher for women than for men-6.0 versus 4.7 percent. (See table 2.) Over the year, these proportions edged up by 0.5 and 0.3 percentage point, respectively. However, both rates remained lower than they had been in the early 1990s. In 1993, for example, the rates were 7.3 percent for women and 6.2 percent for men.

The proportion who were in poverty was higher among women who were in the labor force for 27 weeks or more than among men for all of the major racial and ethnic groups, with the exception of Asian workers, for whom the rates were about the same. The incidence of poverty among working black women was about twice that of their male counterparts, while the rates for white and Hispanic women were only 0.5 percentage point greater than those for their male counterparts. This is in part because black women are

Table A. Poverty status of persons and primary families in the labor force for 27 weeks or more, 2000-2002
(Numbers in thousands)

| Characteristic | 2000 | 2001 | $2002{ }^{1}$ |
| :---: | :---: | :---: | :---: |
| Total persons ${ }^{2}$............... | 137,398 | 138,143 | 139,728 |

| Poverty rate ............... | 5.6 | 5.9 | 6.3 |

[^0]
far more likely to head families alone than are women in other racial and ethnic groups.

In 2002, about 71 percent of the working poor were white. However, the proportions classified as working poor for blacks (10.5 percent) and Hispanics or Latinos (10.4 percent) continued to be about twice those of whites ( 4.5 percent) and Asians (4.6 percent). (See table 2.)

Young workers are more vulnerable to poverty than other groups, in part because their earnings are lower and unemployment is higher for them than for their older counterparts. Among youths who were in the labor force for 27 weeks or more in 2002, 9.0 percent of 16 - to 19-year-olds and 10.2 percent of 20 - to 24 -year-olds were in poverty. These rates were roughly double the rate for workers aged 35 to 44 ( 5.2 percent) and about triple the rate for workers 45 to 54 years of age ( 3.2 percent).

Black and Hispanic or Latino teenagers who were in the labor force for 27 weeks or more were much more likely to be in poverty. Among 16- to 19 -year-olds, the proportions who were in poverty for blacks (17.8 percent) and Hispanics or Latinos (13.9 percent) were much higher than those for whites (7.9 percent) and Asians ( 8.2 percent). (See table 2.)

## Educational attainment

The incidence of living in poverty greatly diminishes as workers achieve higher levels of education. In 2002, only 1.6 percent of college graduates who were in the labor force for 27 weeks or more were counted among the working poor, compared with 6.1 percent of high school graduates with no college and 14.6 percent of high school dropouts. Persons with higher levels of education have better access to higher paying jobs, such as managerial, professional, and related occupations, than do those with lower levels of education. (See table 3.)

At all major educational levels, women were more likely
than men to be among the working poor. Among whites, the differences in the working poor rates by education between women and men were relatively small. For example, about 5.5 percent of the white female high school graduates with no college who were in the labor force for 27 weeks or more were among the working poor, compared with 4.7 percent of their male counterparts. Among college graduates, the proportions classified as working poor for white women and men were 1.5 and 1.3 percent, respectively. In contrast, black women without a college degree were considerably more likely than their male counterparts to be among the working poor. About 17.2 percent of the black women high school graduates with no college were among the working poor, compared with 8.0 percent of the men. Among college graduates, however, black women were less likely than their male counterparts to be among the working poor -2.1 and 2.4 percent, respectively.

## Occupation

The likelihood of being among the working poor varies widely by occupation. Workers in occupations requiring higher education and characterized by relatively higher earnings, such as managerial, professional, and related occupations, were least likely to be classified as working poor ( 2.0 percent) in 2002. On the other hand, persons employed in occupations that usually do not require high levels of education and that are characterized by relatively lower earnings-such as services and natural resources, construction, and maintenance-were more likely to be among the working poor. For example, 10.3 percent of service workers were classified as working poor in 2002. Service occupations, with 2.2 million working poor, accounted for 29.3 percent of all those classified as the working poor. Overall, 6.8 percent of workers in natural resources (farming, fishing, and forestry), construction, and maintenance occupations were classified as working poor. Within this occupational group, 13.2 percent of farmworkers and 7.8 percent of construction workers were classified as working poor. (See table 4.)

## Families

Nearly 4.0 million families with at least one member in the labor force for 27 weeks or more- 6.3 percent of all such families-lived below the poverty level in 2002. This was up from 5.9 percent of families in the previous year. For families with one member in the labor force for 27 weeks or more, married-couple families had a lower incidence of poverty (8.1 percent) than did either families maintained by single women (21.5 percent) or families maintained by men with no spouse present (11.8 percent). This was true regardless of which member of the married-couple family was in the labor force. (See table 5.)

The poverty threshold for families reflects both the total family income and the number of family members. The more workers a family has, the higher its income is likely to be and, therefore, the less likely the family is to be living below the poverty line. For example, only 0.8 percent of families
with three or more members in the labor force for 27 weeks or more and 2.0 percent of families with two such labor force participants were among the working poor in 2002. In contrast, 12.5 percent of families with only one member in the labor force for 27 weeks or more were in poverty.

The larger the family, however, the higher the level of income needed to keep the family out of poverty. In addition, the presence of children can reduce the ability of one or both of the parents to participate fully in the labor force. Thus, working families with children, regardless of type of family, had higher poverty rates than families without children. The difference was greatest among families maintained by women. Among these families, 22.3 percent of those with children were poor in 2002, compared with 4.9 percent of those without children. (See table 5.)

Working wives are less likely than working husbands to be poor, primarily because working wives are more likely to be in families with a second earner, usually the husband. In 2002, 1.9 percent of married women who were in the labor force for 27 weeks or more were in poverty, compared with 3.5 percent of married men. In comparison, 17.6 percent of women who maintained families and who were in the labor force for 27 weeks or more were in poverty. (See table 6.)

## Unrelated individuals

Unrelated individuals are those who either live alone or live with nonrelatives. Of the 29.8 million unrelated individuals who were in the labor force for 27 weeks or more in 2002, 8.7 percent lived below the poverty level. This was up from 8.1 percent in 2001. (See table 7.)

The living arrangements of unrelated individuals fall into one of two types: Some live by themselves, while others share housing with unrelated persons. Unrelated individuals with low incomes often live with others in order to share expenses and pool resources. Because poverty status for unrelated individuals is determined by their personal income and not by their household income, the poverty measure for these unrelated individuals living with nonrelatives may overstate their actual economic hardship. Conversely, many of those who live alone do so because they have sufficient incomes to support themselves. Persons living with unrelated
individuals and who were labor force participants for more than 27 weeks in 2002 were about twice as likely as those living alone to be poor ( 11.3 percent and 6.4 percent, respectively). Teenagers who were in the labor force for 27 weeks or more and were living on their own or with others not related to them were more vulnerable to being poor than were other unrelated individuals. In 2002, 38.0 percent of such teenagers lived below the poverty level.

## Labor market problems

As noted earlier, persons who usually work full time are far less likely to live in poverty than are others. Yet, there remains a sizable group of full-time workers who live below the poverty threshold. Among those who participated in the labor force for more than half of the year and who usually worked in full-time wage and salary jobs, 3.6 million, or 3.3 percent, were classified as working poor in 2002. (See table 8.) This proportion has edged up from its recent low of 3.1 percent in 2000.

There are three major labor market problems that can impede a worker's ability to earn an income above the poverty threshold: Low earnings, periods of unemployment, and involuntary part-time employment. (See Technical Note for definitions.)

In 2002, 80.9 percent of the working poor who usually worked full time experienced at least one of these major labor market problems. Low earnings continued to be the most common condition encountered, with 65.4 percent facing low earnings either alone or in conjunction with other labor market problems. About 35 percent experienced unemployment either alone or in conjunction with other problems. Only 5.2 percent experienced all three problemslow earnings, unemployment, and involuntary part-time employment.

Some 690,000 persons, or 19.1 percent of the working poor who usually worked full time, did not experience any of the three primary labor market problems in 2002. Their classification as working poor may be explained by other factors, including short-term employment, some weeks of voluntary part-time work, or a family structure that increases the risk of poverty.

## Technical Note

## Source of data

The primary source of data in this report is the 2003 Annual Social and Economic Supplement to the Current Population Survey (CPS). The CPS is a monthly survey of 60,000 households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics to collect demographic, social, and economic information about persons 16 years of age and older. The Annual Social and Economic Supplement is asked of part of the CPS samples for February and April and of the entire sample for March, comprising a total of 78,000 households. The work experience and income information collected in the Annual Social and Economic Supplement refers to activity in the previous calendar year.

The estimates in this report are based on a sample and, consequently, may differ from figures that would have been obtained from a complete count using the same questionnaire and procedures. Sampling variability may be relatively large in cases where the numbers are small. Thus, small estimates, or small differences between estimates, should be interpreted with caution. For a detailed explanation of the Annual Social and Economic Supplement to the CPS, its sampling variability, and more extensive definitions than those provided below, see Poverty in the United States: 2002, Current Population Reports, series P-60, no. 222 (U.S. Census Bureau, September 2003). This publication also is available on the Census Bureau Web site at http://www.census.gov/

## Comparability of estimates

The 2002 estimates in this report, which were collected in the 2003 Annual Social and Economic Supplement to the CPS, are not strictly comparable with data for 2001 and earlier years because of the introduction in January 2003 of revised population controls used in the CPS. The effect of the revised population controls on the estimates of the working poor is unknown. However, the effect of the new controls on the monthly CPS estimates was to increase the January 2003 employment level by 576,000 and the unemployment level by 38,000 relative to the December 2002 level. For additional information, see "Revisions to the Current Population Survey Effective in January 2003" in the February 2003 issue of Employment and Earnings, available on the Internet at http://www.bls.gov/cps/rvcps03.pdf.

## Concepts and definitions

Poverty classification. Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by Federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families, based on factors such as family size and the number of children under 18 years of age.

The actual poverty thresholds vary in accordance with the makeup of the family. In 2002, the average poverty threshold for a family of four was $\$ 18,392$; for a family of nine or more persons, the threshold was $\$ 37,062$; and for an unrelated individual age 65 or older, it was $\$ 8,628$. Poverty thresholds are updated each year to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). The thresholds do not vary geographically. For more information, see Poverty in the United States: 2002, cited above.

Low earnings. The low-earnings level, as first developed in 1987, represented the average of the real value of the minimum wage between 1967 and 1987 for a 40 -hour workweek. The base year of 1967 was chosen because that was the first year in which minimum-wage legislation covered essentially the same broad group of workers that currently is covered. The low-earnings level has subsequently been adjusted each year using the CPI-U, so that the measure maintains the same real value that it held in 1987. In 2002, the low-earnings threshold was $\$ 264.80$ per week. For a more complete definition, see Bruce W. Klein and Philip L. Rones, "A profile of the working poor," Monthly Labor Review, October 1989, pp. 3-13.

Income. Data on income are limited to money income received in the calendar year preceding the supplement, before personal income taxes and payroll deductions. They do not include the value of noncash benefits such as Food Stamps, Medicare, Medicaid, public housing, and employer-provided benefits. For a complete definition of the income concept, see Poverty in the United States: 2002, cited above.

In the labor force. Persons in the labor force are those who worked or looked for work sometime during the calendar year preceding the supplement. The number of weeks in the labor force is accumulated over the entire year. The focus in this report is on persons in the labor force for 27 weeks or more.

Involuntary part-time workers. These are persons who, in at least 1 week of the year, worked fewer than 35 hours because of slack work or business conditions or because
they could not find full-time work. The number of weeks of involuntary part-time work is accumulated over the year.

Occupation. Refers to the occupation in which a person worked the most weeks during the calendar year.

Unemployed. Unemployed persons are those who looked for work while not employed or those who were on layoff from a job and expecting recall. The number of weeks unemployed is accumulated over the entire year.

Family. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption. The count of families used in this report includes only primary families. A primary family includes the reference person (householder) and all of the persons living in the household who are related to the reference person. Families are classified either as married-couple families or as those maintained by men or women without spouses present. Family status is determined at the time of the interview, and thus may be different from that of the previous year.

Unrelated individuals. These are persons who are not living with any relatives. Such individuals may live alone, reside in
a household with others who are not relatives, or live in group quarters with other unrelated individuals.

Related children. Data on related children refer to own children (including sons, daughters, and step- or adopted children) of the husband, wife, or person maintaining the family and all other children related to the householder by birth, marriage, or adoption.

Race. White, black or African American, and Asian are terms used to describe the race of persons. Persons in these categories are those who selected that race group only. Data for the remaining race categories-American Indian or Alaska Native, Native Hawaiian or Other Pacific Islanders, and persons who selected more than one race categoryare included in totals but are not shown separately because the number of survey respondents is too small to develop estimates of sufficient quality for publication. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. This term refers to persons who identified themselves in the CPS enumeration process as being Spanish, Hispanic, or Latino. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

1 Number below the poverty level as a percent of the total in the labor force for 27 weeks or more.
${ }_{2}$ Includes persons with a high school diploma or equivalent.
3 Includes persons with bachelor's, master's, professional, and doctoral degrees.

4 Beginning with data for 2002, which were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey, persons who selected this race group only; persons who selected more than one race group are not included. Prior to 2002, persons who reported more than one
race group were included in the group they identified as the main race. Also beginning in 2002, Asians no longer include Pacific Islanders.

5 Data not shown where base is less than 80,000.
NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Also, see Note, table 1.

Table 4. People in the labor force for 27 weeks or more who worked during the year: Poverty status by occupation of longest job held, race, Hispanic or Latino ethnicity, and sex, 2002
(Numbers in thousands)

${ }^{1}$ Number below the poverty level as a percent of the total in the labor force for 27 weeks or more.

2 Beginning with data for 2002, which were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey, persons who selected this race group only; persons who selected more than one race group are not included. Prior to 2002, persons who reported more than one race group were included in the group they identified as the main race. Also beginning in 2002,

Asians no longer include Pacific Islanders.
NOTE: Estimates for the above race groups (white, black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Also, see Note, table 1.

Table 8. People in the labor force for 27 weeks or more: Poverty status and labor market problems of full-time wage and salary workers, 2002
(Numbers in thousands)

| Poverty status and labor market problems | Total | At or above poverty level | Below poverty level | Rate ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: |
| Total, full-time wage and salary workers | 108,959 | 105,350 | 3,609 | 3.3 |
| No unemployment, involuntary part-time employment, or low earnings ${ }^{2}$. | 89,533 | 88,843 | 690 | . 8 |
| Unemployment only | 6,798 | 6,400 | 398 | 5.9 |
| Involuntary part-time employment only | 2,401 | 2,348 | 52 | 2.2 |
| Low earnings only .. | 6,575 | 5,123 | 1,452 | 22.1 |
| Unemployment and involuntary part-time employment | 1,104 | 994 | 110 | 10.0 |
| Unemployment and low earnings | 1,466 | 897 | 569 | 38.8 |
| Involuntary part-time employment and low earnings .......................... | 654 | 502 | 152 | 23.3 |
| Unemployment, involuntary part-time employment, and low earnings | 429 | 243 | 186 | 43.3 |
| Unemployment (alone or with other problems) | 9,796 | 8,534 | 1,262 | 12.9 |
| Involuntary part-time employment (alone or with other problems) | 4,587 | 4,087 | 501 | 10.9 |
| Low earnings (alone or with other problems) ............................ | 9,124 | 6,765 | 2,359 | 25.9 |

${ }^{1}$ Number below the poverty level as a percent of the total in the labor force for 27 weeks or more.

2 The low-earnings threshold in 2002 was $\$ 264.80$ per week. NOTE: See Note, table 1.

[^0]:    ${ }^{1}$ Data for 2002, which were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey, are not strictly comparable with data for 2001 and earlier years because of the introduction in January 2003 of revised population controls used in the survey.
    ${ }^{2}$ Includes persons in families, not shown separately.
    ${ }^{3}$ Primary families with at least one member in the labor force for more than half of the year.

[^1]:    1 Number below the poverty level as a percent of the total in the labor force.

    NOTE: Data refer to persons 16 years and older. Data for 2002, which were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey, are not stricly comparable with data for 2001

[^2]:    ${ }^{1}$ Beginning with data for 2002, which were collected in the 2003 Annual Social and Economic Supplement to the Current Population Survey, persons who selected this race group only; persons who selected more than one race group are not included. Prior to 2002, persons who reported more than one race group were included in the group they identified as the main race. Also beginning in 2002, Asians no longer include Pacific Islanders.
