NATIONAL MILK DRUG RESIDUE DATA BASE FISCAL YEAR 2004 ANNUAL REPORT

October 1, 2003 - September 30, 2004

INTRODUCTION

The National Milk Drug Residue Data Base is a voluntary industry reporting program. Mandatory reporting is required by State regulatory agencies under the National Conference on Interstate Milk Shipments (NCIMS). Data are reported on the extent of the national testing activities, the analytical methods used, the kind and extent of the animal drug residues identified, and the amount of contaminated milk that was removed from the human food supply. The system includes all milk, Grade A and non-Grade A, commonly known as manufacturing grade. Grade A milk represents approximately 90% of the milk supply and is regulated through the NCIMS by State regulatory agencies. Manufacturing grade milk is under the direction of the regulatory agencies in the States where it is produced and may be subject to the standards recommended by the United States Department of Agriculture (USDA). Data reported to the National Milk Drug Residue Data Base are for educational and analytical purposes and are not intended or suitable for regulatory follow-up.

BACKGROUND

The National Conference on Interstate Milk Shipments (NCIMS) is a voluntary organization directed and controlled by member States to promote the availability of a high quality milk supply. The Food and Drug Administration (FDA) and the NCIMS through their collaborative efforts have developed a cooperative, federal-state program (the Interstate Milk Shipper program) to ensure the sanitary quality of Grade A milk and milk products shipped interstate. During the 1991 meeting of the NCIMS, the Conference authorized a national program to compile the results of residue testing by industry and regulatory agencies.

Subsequently, FDA awarded a contract to develop a National Milk Drug Residue Data Base. The data base is operated by an independent third party, under contract to the FDA. The data base design was developed in consultation with a project advisory group with members from the FDA and a NCIMS committee representing dairy producers, dairy processors, USDA, State regulatory agencies, and academia. The data base was designed to promote maximum participation by the dairy industry to report on a voluntary basis all of their testing, without compromising any confidential data. Information regarding individual firm's data is not submitted to the data base contractor.

It is important to recognize that the samples and tests reported do not necessarily represent one hundred percent of the milk supply from every State. However, as State and industry participation in the data base increased, reporting of the number of samples and tests similarly increased. Continuing efforts are being made to ensure that there is uniform reporting among all the States and the industry and to ensure that the drugs and test methods reported are correct.

In December of 2003, the FDA notified the reporting states via memoranda M-I-03-18 and 19 that two Snap tests for beta lactams and the Delvo Xpress would no longer be available for use. The Snap tests were being

superceded by the Idexx New Snap test. The Delvo Xpress would have no successor. During this fiscal year, efforts were made to carefully monitor the final expiration dates for these test methods during the transition period to assure that data reporters utilized the appropriate test code for any test methods which may have replaced these defunct tests. To enhance these efforts, a revised drug code list was distributed to state data providers in January of 2004. This list included codes for two test methods which were accepted for use at the 2003 meeting of NCIMS; specifically, Charm SL-6 and Idexx New Snap.

SUMMARY

This report presents summary data on samples and tests conducted during the Fiscal Year 2004, October 1, 2003 to September 30, 2004. All 50 States and Puerto Rico submitted data for this report.

The Pasteurized Milk Ordinance (PMO), the rules which State agencies use to implement their milk program, requires that all bulk milk tankers be sampled and analyzed for animal drug residues before the milk is processed. Any tanker found positive is rejected for human consumption.

During this period **4,410,056** samples were analyzed for animal drug residues. Of these samples **2,495** were positive for a residue. A total of **4,503,617** tests were reported on the samples for **13** different groups of families or individual drugs. **Thirty-nine** testing methods were used to analyze the samples for residues. Details are presented in the tables in this report.

SAMPLE RESULTS

A SAMPLE is defined as representing a load or lot of milk sampled and analyzed, e.g. a bulk milk pick-up tanker, producer, or over-the-road tanker, a silo, etc.

Table 1 shows the results of the samples tested by source.

Data are reported by four SOURCES OF SAMPLES:

1. Bulk Milk Pick-Up Tanker - bulk raw milk from a dairy farm.
2. Pasteurized Fluid Milk and Milk Products - after pasteurization; finished product in package form or bulk. Includes milk products such as milk, cream, condensed milk and dry milk products, and condensed and dry whey products.
3. Producer - raw milk obtained from the bulk tank/silo on a dairy farm. Samples are reported by the permitting State, rather than by the analyzing State.
4. Other - milk from milk plant silos, over-the-road tankers, etc.

A POSITIVE result, as used in this report, means that the sample was found to be positive for a drug residue by a test acceptable for taking regulatory action in a certified laboratory by a certified analyst or the milk was rejected on the basis of an initial test by the milk processor.

The DISPOSITION Per PMO column represents the amount of milk contained in the tank or lot found to be positive and disposed of in accordance with the PMO and/or applicable State regulations.

TABLE 1 -- Sample Results October 1, 2003 to September 30, 2004				
Source of Sample	Total Samples	Number Positive	Percent Positive	Disposition per PMO (Pounds)
Bulk Milk Pick-Up Tanker	3,589,082	1,571	0.044%	58,280,000
Pasteurized Fluid Milk and Milk Products	57,875	4	0.007%	49,000
Producer	677,507	895	0.132%	4,284,000
Other	85,592	25	0.029%	1,065,000
TOTALS	4,410,056	2,495	*	63,678,000

The asterisk (*) notes that a summary of the percent positive cannot be provided because there is no uniformity in terms of sampling in the four categories. For example, the PMO sets forth specific sampling requirements for Beta lactams testing as follows:

1. Bulk Milk Pick-Up Tanker Samples -- samples are taken daily on receipt of every tanker;
2. Pasteurized Fluid Milk and Milk Products -- a minimum of four samples must be tested for each finished product from each plant every six months;
3. Producer -- each producer must be tested at least four times every six months; and
4. Other -- samples are conducted on a random basis.

Table 2 presents these results in greater detail and shows the number of samples conducted by industry and by regulatory agencies. Industry samples are taken by processing facilities, receiving and transfer stations, and marketing groups or cooperatives. Industry samples may be conducted to meet the industry requirements of Appendix N of the PMO which sets forth testing and reporting requirements for animal drug residues or for quality control purposes. Regulatory samples are taken by State and local regulatory agencies.

TABLE 2 -- Industry and Regulatory Samples
October 1, 2003 to September 30, 2004

Source of Sample	Number of Industry Samples	Number of Positive Industry Samples	Number of Regulatory Samples	Number of Positive Regulatory Samples	Total Samples	Total Positive Samples	Total Percent Positive	Disposition Per PMO (Pounds)
GRADE A								
Bulk Milk Pick-Up Tanker	3,289,873	1,429	22,709	14	3,312,582	1,443	0.044%	54,315,000
Pasteurized Fluid Milk and Milk Products	3,615	0	52,374	4	55,989	4	0.007%	49,000
Producer	466,649	648	163,931	184	630,580	832	0.132%	4,284,000
Other	67,842	23	7,982	1	75,824	24	0.032%	1,028,000
NON-GRADE A								
Bulk Milk Pick-Up Tanker ¹	274,865	127	1,635	1	276,500	128	0.046%	3,965,000
Pasteurized Fluid Milk and Milk Products	1,568	0	318	0	1,886	0	0.000%	0,000
Producer	36,396	47	10,531	16	46,927	63	0.134%	0,000
Other	9,021	1	747	0	9,768	1	0.010%	37,000
TOTALS	4,149,829	2,275	260,227	220	4,410,056	2,495	*	63,678,000 ²

¹It is a common practice in some States, including two large milk production States, that bulk milk pick-up tankers pickup milk from Grade A and non-Grade A milk producers on the same truck. Then, these loads are delivered to non-Grade A processing facilities. Because of this commingling of the two grades of milk, all data related to these loads are reported under non-Grade A.

² Note that this represents 0.037% of the Totals milk supply of the annual production of 170.6 billion pounds.

*= See Table 1 for explanation

TESTS CONDUCTED

An objective of the National Milk Drug Residue Data Base is to record every test run on each sample analyzed. Since some samples are analyzed for more than one drug residue, the number of tests conducted (4,503,617) is greater than the number of samples (4,410,056). To avoid duplicate reporting of samples, the number of samples analyzed is reported separately from the number of tests run in the data base.

Table 3 presents summary results of the number of tests which were conducted during October 1, 2003 to September 30, 2004. The term, validated test, as used in this report, is a test used for the screening of raw milk for drug residue which has been evaluated in accordance with Appendix N of the PMO and found acceptable by FDA in accordance with the standards established for the evaluation of tests. In addition, FDA validated drug residue detection procedures for screening and quantitation of drug residues in milk may be used. Table 3A presents summary results using validated tests and Table 3B presents summary results using non-validated tests.

TABLE 3 -- Tests Conducted October 1, 2003 to September 30, 2004

Table 6 presents details on the tests used. The data in this table are comparable to Table 5, but the data are arranged by tests within each family/drug. Therefore, the Totals are the same in both tables. The testing methods with the largest use were Charm SL - Beta lactams used more than 2.4 million times followed by Delvotest P 5 Pack - Beta lactams used more than 674 thousand times, Snap (Reader) used more than 338 thousand times and Charm II Tablet Competitive - Beta lactams used for 286 thousand tests. Table 6A shows a comparison of tests conducted using Validated and Non-Validated test methods for Sulfonamides and Tetracyclines.

Tables 7-1 to 7-8 present additional details of the testing conducted. These tables show the testing by family and by individual drugs and present results in terms of Grade A and Non-Grade A testing. Data on individual drugs listed in these tables, e.g., Cloxacillin, Sulfamethazine, etc., are not included in the Totals for the family, e.g, Beta lactams, Sulfonamides, etc.

TABLE 7-1 -- Grade A Bulk Milk Pick-Up Tanker Testing October 1, 2003 to September 30, 2004
