Tuesday, October 30, 1984

EMPLOYMENT COST INDEX - SEPTEMBER 1984

The Employment Cost Index (ECI) increased 1.3 percent in the 3 months ended in September 1984, the U.S. Department of Labor's Bureau of Labor Statistics reported today. For the year ended in September 1984, the increase was 5.1 percent--down from 5.8 percent for the year ended in September 1983.

The September 1984 index level stood at 122.4 for compensation costs (including wages, salaries, and employer costs for employee benefits), based on June 1981=100 (table 1). The ECI covers private industry (excluding farms and households) and State and local government workers. It is not seasonally adjusted.

The 1.3 percent increase in compensation costs was below the 1.7 percent rise in the June-September period a year ago. This slowdown resulted from smaller compensation increases for private industry workers (0.8 percent, down from 1.5 percent). State and local government workers, on the other hand, registered a 3.5 percent increase in June-September 1984, compared with 3.2 percent a year earlier. Compensation cost changes for State and local government workers are heavily concentrated in the June-September quarter whereas those for private industry workers are more widely dispersed throughout the year.

Wages and salaries for private industry workers rose 0.8 percent in June-September 1984--down from 1.4 percent a year ago. This decrease was greater for white-collar workers (0.8 percent, down from 2.0 percent) than for blue-collar workers (0.7 and 0.9 percent). Wage and salary increases for State and local government workers were slightly higher in the third quarter of 1984 (3.4 percent) than in the same quarter of 1983 (3.0 percent). The higher percent increase mainly resulted from wage increases for school employees, which averaged a 4.5 percent increase in June-September 1984 compared with a 3.9 percent increase a year earlier.

For the year ended September 1984, compensation cost increases (5.1 percent) were below gains a year ago (5.8 percent). A slowdown was registered for private industry workers (4.8 percent, down from 5.8 percent), but not for State and local government workers (6.6 percent, up from 5.7 percent).

Over-the-year increases in wages and salaries for private industry workers showed the same pattern as compensation gains. The slowdown in wage and salary increases resulted in several worker groups recording their lowest 12-month increases since these ECI series began in 1976 or 1977, including:

- * Clerical workers (4.5 percent)
- * Professional and technical workers (4.4 percent)

Centennial
of Labor
Statistics

- * White-collar workers (4.3 percent)
- * Workers in wholesale trade (4.3 percent)
- * ALL PRIVATE INDUSTRY WORKERS (4.1 percent)
- * Workers in the South region (4.1 percent)
- * Workers in nondurable manufacturing (4.1 percent)
- * Blue-collar workers (3.4 percent)
- * Union workers (3.3 percent)
- * Craft and kindred workers (3.2 percent)
- * Workers in the West region (3.0 percent)
- * Union workers in nonmanufacturing (2.5 percent)

COMPENSATION

1/ The index measures changes in total compensation costs (wages, salaries, and employer costs for employee benefits).
 2/ Includes private industry and State and local government workers and excludes farm, household, and Federal government workers.
 3/ Consists of legislative, judicial, administrative, and regulatory activities.
 4/ Excludes farm and household workers.
 5/ Includes, for example, library, social, and health services.

EXPLANATORY NOTE

The Employment Cost Index (ECI) is a quarterly measure of the change in the price of labor, free from the influence of employment shifts among occupations and industries. The ECI wage and salary series is limited to changes in wage and salary rates, defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, excluding premium pay for overtime, work on weekends and holidays, and shift differentials. Production bonuses, incentive earnings, commission payments, and cost-of-living adjustments are included in straight-time wage and salary rates.

The compensation series includes employer costs for employee benefits as well as wages and salaries. Benefits covered by the ECI include:

Paid leave - Paid vacations, paid holidays, paid sick leave, and other paid leave;

Supplemental pay - Premium pay for overtime and work on weekends and holidays, shift differentials, and nonproduction bonuses;

Insurance benefits - Life, health, and sickness and accident insurance;

Retirement and savings benefits - Pension and other retirement plans and savings and thrift plans;

Legally required benefits - Social security, railroad retirement and supplemental retirement, railroad unemployment insurance, Federal and State unemployment insurance, workers' compensation, and other legally required benefits such as State temporary disability insurance; and

Other benefits - Severance pay, supplemental unemployment plans, and merchandise discounts in department stores.

Excluded from both wages and salaries and employee benefits are such items as payments-in-kind, free room and board, and tips.

The ECI collects data for both the private and public sectors, which are published separately and also combined as the total civilian economy. The private sector includes the total private economy, excluding farms and households. The public sector covers State and local governments, but excludes the Federal government.

Each quarter, straight-time average hourly wage and salary rates and benefit cost data (cents-per-hour-worked) are collected from a probability sample of about 10,000 occupations within 2,000 sample establishments in the private sector and about 3,700 occupations within 750 sample establishments in State and local governments.

Occupations were classified according to definitions used in the 1970 Census. Within an establishment, specific job categories are selected to represent broader occupational definitions. The sample establishments were classified in industry categories based on the 1972 Standard Industrial Classification (SIC), as defined by the U.S. Office of Management and Budget. Within the private sector sample, establishments are designated by a 2-digit SIC, while in State and local governments, industrial categories vary from a more specific 3-digit SIC such as elementary and secondary schools to a broader major industry division such as public administration. Each establishment is also classified by ownership--State government, local government, or private.

Fixed employment weights from the 1970 Census are used each quarter to calculate the most aggregate indexes--civilian, private, and State and local governments. These fixed weights are also used to derive all of the industry and occupation series indexes. For the series based on bargaining status, region, or area size, however, employment data are not available from the Census. The 1970 employment weights are reallocated within these series each quarter based on the current sample. The indexes for these series, consequently, are not strictly comparable to those for the aggregate, industry, and occupation series. A fuller explanation of the calculation of index numbers appears in an article, "Estimation procedures for the Employment Cost Index," in the May 1982 issue of the Monthly Labor Review.

Data are collected for the pay period including the 12th day of the survey months of March, June, September, and December. ECI statistics are neither annualized nor adjusted for seasonal influences. For example, the 0.8 percent change in wage and salary rates for "private industry workers" in the 3 months ended September 1984 (table 3) is the actual percent change in straight-time average hourly wage and salary rates from the pay period including the 12th day of June 1984 to the comparable pay period in September 1984.

More detailed information on the ECI is available in several articles and publications. These include a chapter in the BLS Handbook of Methods (Bulletin 2134-1), "The Employment Cost Index." Two articles also appeared in the Monthly Labor Review: "Employment Cost Index: a measure of change in the 'price of labor'," July 1975; and "How benefits will be incorporated into the Employment Cost Index," January 1978. Reprints of these articles plus several other descriptive pieces and a historical listing of ECI data are available upon request.
