

Building with Shapes

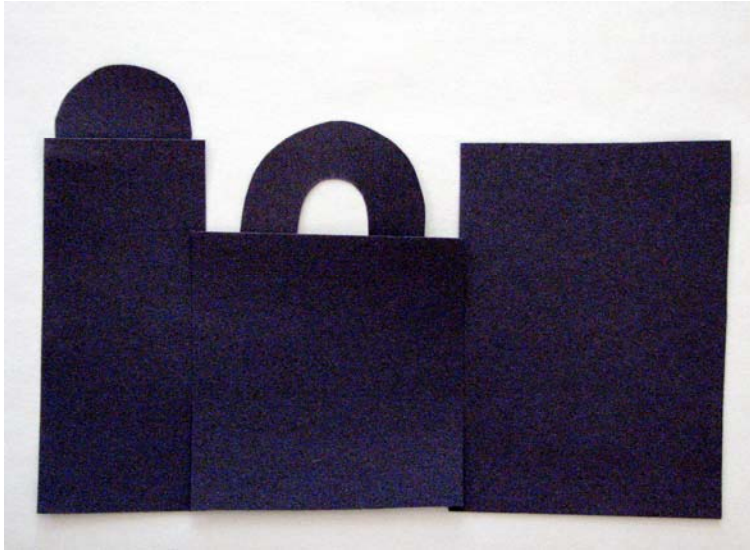

Combine shapes to plan the general shape of your building.

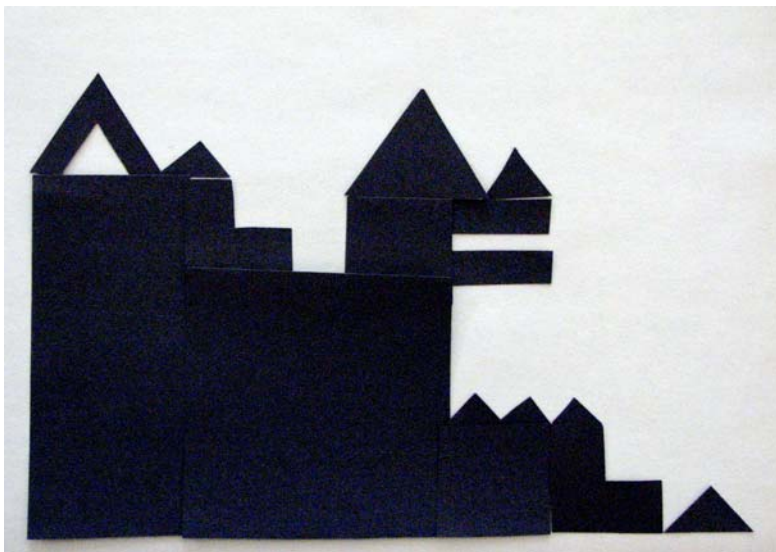

The building plan below combines squares and rectangles.

This building plan combines a square, rectangles, a semicircle and an arch.

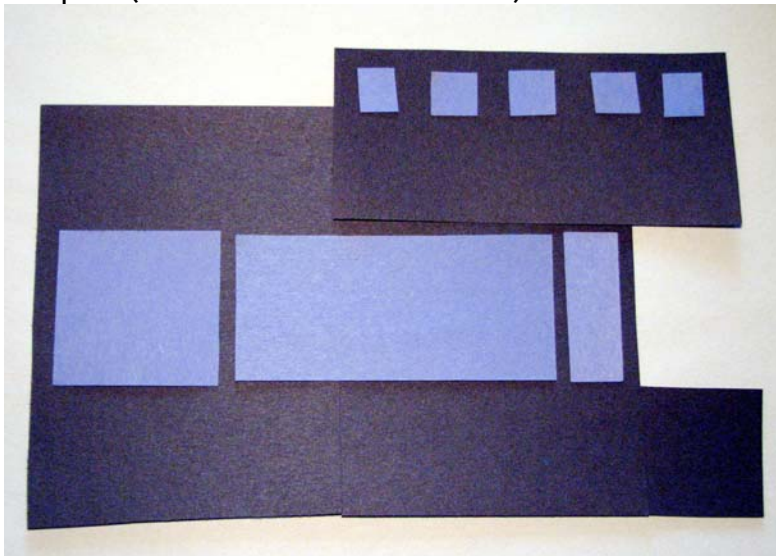

This more complex building plan uses lots of triangular shapes with a variety of angular shapes.

This building plan begins with angular shapes and adds curved shapes.

The building plan has a simple basic shape made more interesting with smaller shapes (windows and decoration) in another color.

Added shapes (doorway and windows) also make this building more interesting.
