RACER Results for 37 Thermal Solution Experiments (HST's) Using PRE7B0 Data

ICSBE Name	# of Cases	Geometry	Relected/Unrefelcted	Solution
HEU-SOL-THERM-001	10	Cylindrical	Unreflected	Nitrate
HEU-SOL-THERM-009	4	Spherical	Reflected	Oxyfluoride
HEU-SOL-THERM-010	4	Spherical	Reflected	Oxyfluoride
HEU-SOL-THERM-011	2	Spherical	Reflected	Oxyfluoride
HEU-SOL-THERM-012	1	Spherical	Reflected	Oxyfluoride
HEU-SOL-THERM-013	4	Spherical	Unreflected	Nitrate
HEU-SOL-THERM-032	1	Spherical	Unreflected	Nitrate
HEU-SOL-THERM-042	8	Spherical	Unreflected	Nitrate
HEU-SOL-THERM-043	3	Spherical	Unreflected	Oxyfluoride

Ensemble-Average Value Comparisons

- Comparisons of k-eff, core leakage, and absorption fractions^{1,2}.

¹Uncertainties are < 0.0004 Δk 95% C.I. on eigenvalues and < approx. 0.1% relative error in absorption fractions.

²ENDF65 consists of ENDF/B-VI.5 for all isotopes except 235U which is ENDF/B-VI.3. ENDF65+ includes ENDF/B-VI.5 235U.

Linear Regression Analysis (RACER)

- Investigate trends in eigenvalue versus various regressors
 - above thermal leakage from core (ATL),
 - above thermal fission (ATF),
 - slowing down density to thermal (Slow-to-Thermal),
 - ^1H absorption fraction (H Abs.),
 - ^{16}O absorption fraction (O Abs.),
 - ^{235}U absorption fraction (U235 Abs.),
 - ^{238}U absorption fraction (U238 Abs.),
 - ^1H -to- ^{235}U ratio in core (H-to-U),
 - ^{14}N absorptions fraction (N Abs.),
 - ^{19}F absorption fraction (F Abs.).
- Look for significant trends or significant changes in trends.
- Perform a multiple regression using all parameters

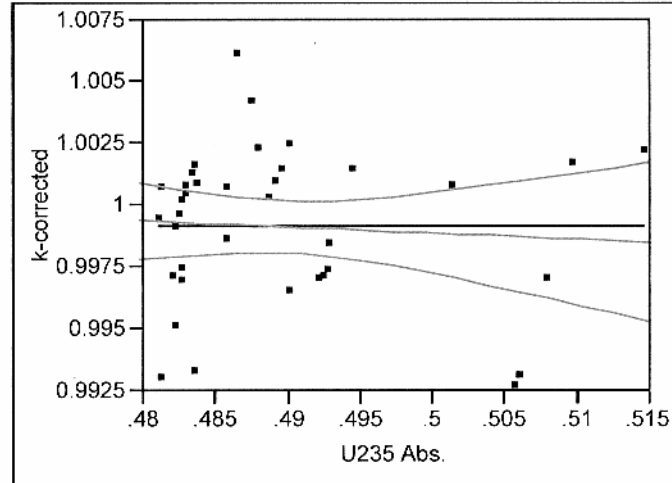

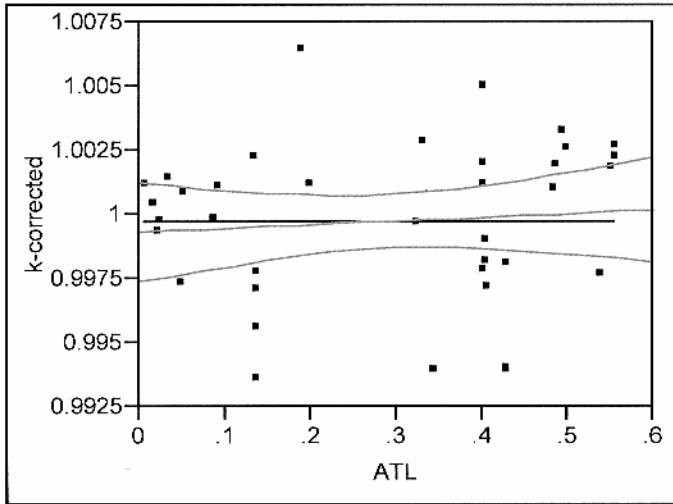

Linear Regression Results (RACER)

- No statistically significant differences were noted when comparing PRE7B0 to ENDF65.
- k(ATL) is shown as an example. A complete table and plots are available.

	ENDF65			PRE7B0		
Parameter	Intercept	Slope	R ²	Intercept	Slope	R ²
ATL	0.9993	0.0015	0.0079	0.9990	0.0003	0.0003

ENDF/B-VI.8 vs VII β 0 LCT (RCP01)

LEU-COMP-THERM-006 Eigenvalues with Selected Cross Section Data Sets

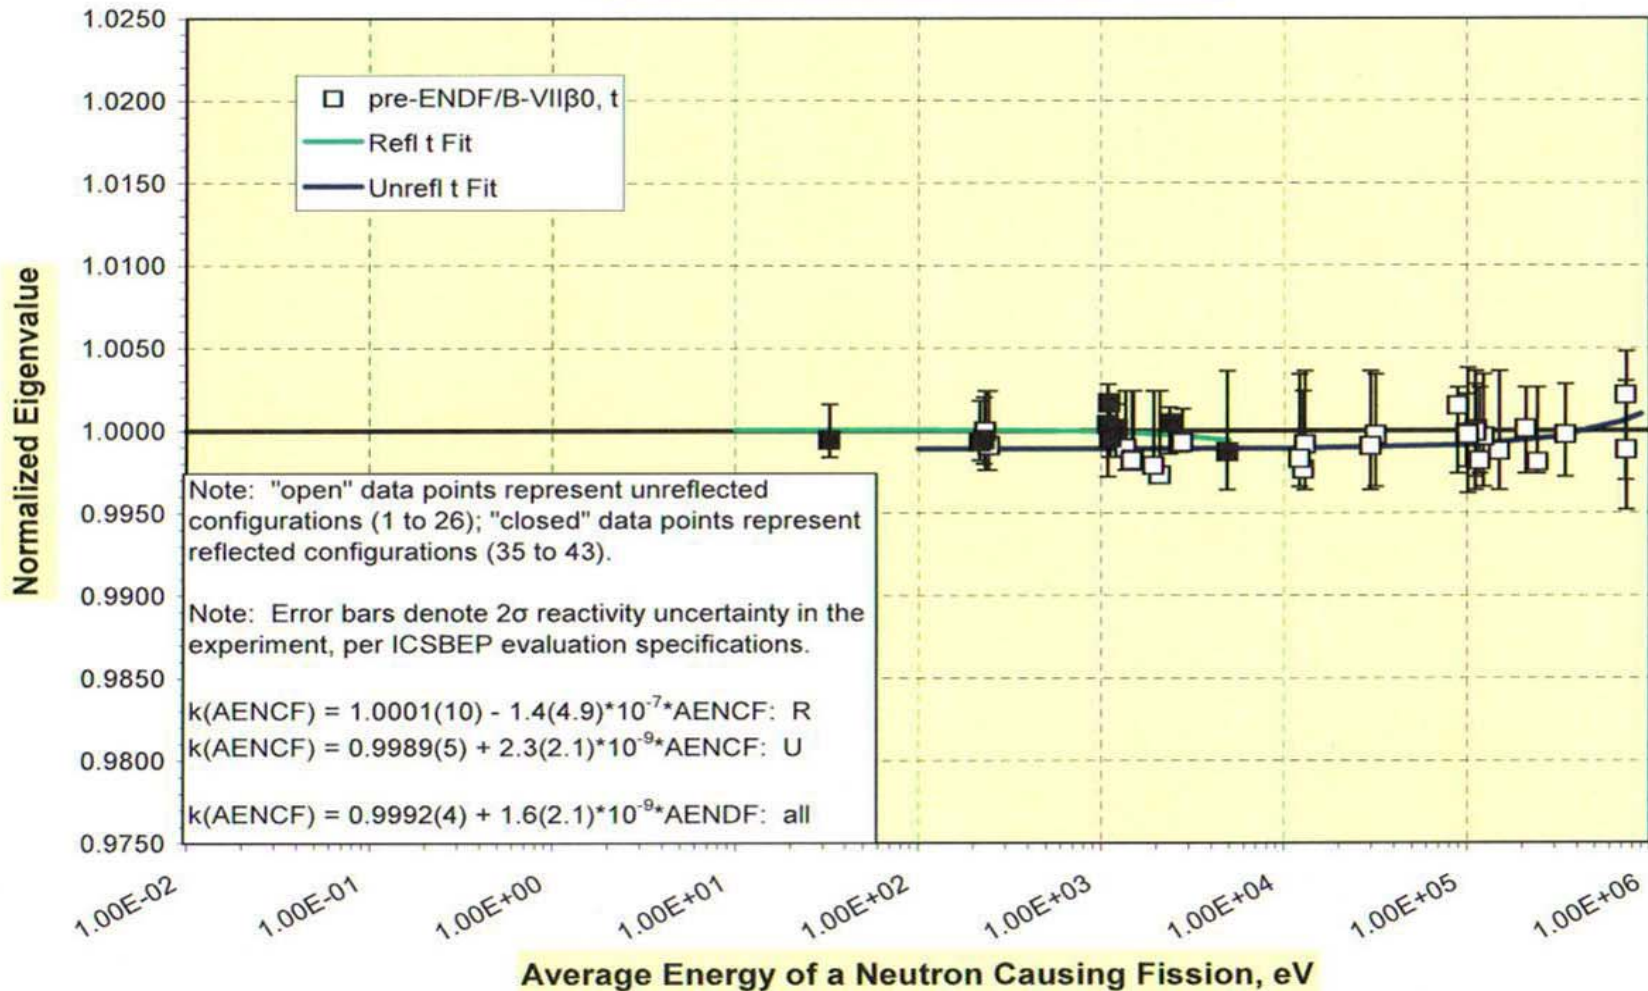

ENDF/B-VI.8 HMF Results (RCP01)

HEU-MET-FAST-007 Eigenvalues (Cases 1 to 26 and 35 to 43)

ENDF/B-VII β 0 HMF Results (RCP01)

HEU-MET-FAST-007 Eigenvalues
(Cases 1 to 26 and 35 to 43)

Conclusion

- For the ICSBEP benchmarks we examined, ENDF/B-VII β 0 performs better than any previous data set we are aware of.
- The dearth of ICSBEP zirconium benchmarks prevents us from drawing any firm conclusions about the Subgroup-23 zirconium cross sections at this time.
