

# Oilseeds: World Markets and Trade

## *Growing Soybean Oil Price Raises Oil's Contribution to Total Soybean Value*

The relative contribution of soybean oil in the over-all value of soybeans has increased significantly since the early 2000's. In 2001, the relative share of soybean oil as a percentage of total soybean value fell below 30 percent. Soybean oil prices reached a low of \$273/ton in February 2001 compared to a soybean price of \$163/ton. However, growing demand for vegetable oil, particularly by the growing fuel sector, has led to tight supplies and soaring prices. This increase, coupled with soybean meal prices hovering between \$175 and \$200/ton for most of the intervening period, pushed the soybean oil share to nearly 42 percent by September 2006. Over the past 12 months, this share has ranged between 40 percent and 45 percent as demand for oils and meals grows.

For the period beginning June 2007, strong demand for soybean oil by US biodiesel producers pushed oil prices higher, further increasing soy oil's share of soybean value. Soybean oil's share peaked at 45 percent by early August as increased crush for oil resulted in larger supplies and lower prices for soybean meal.

By mid-September, soybean oil prices reached \$830/ton and a point of relative supply/demand balance with prices holding relatively steady through October 10<sup>th</sup>. Meanwhile, shortages of feed wheat in Europe and associated high prices led to significant gains in soybean meal demand. Soybean meal prices briefly topped \$300/ton in late September pushing the soy oil share of the soybean price below 39 percent, the lowest percentage since June 2006. However, recent declines in soybean meal prices reflecting declines in other feed grains has brought soy oil's share back to 40 percent. in early October.
