ACKNOWLEDGMENTS

The staff of the Manufacturing and Construction Division prepared this report. **Kimberly P. Moore**, Assistant Chief for Special Studies and Program Support, was responsible for the overall planning, management, and coordination. **Ronald W. Taylor**, Chief, Special Studies Branch, assisted by **David J. Gromos**, Section Chief, performed the planning and implementation. **Micah B. Hartman** and **Joanne J. Volpe** provided primary staff assistance.

Paul Hsen, Assistant Chief for Research and Methodology Programs, assisted by **Stacey Cole**, Chief, Manufacturing Programs Methodology Branch, and **Gary L. Kusch**, Section Chief, provided the mathematical and statistical techniques as well as the coverage operations. **Daniel R. Tulp Jr.** and **John G. Slanta** provided primary staff assistance.

Mendel D. Gayle, Chief, Forms, Publications, and Customer Services Branch, assisted by **Arlinda Y. Allen**, Section Chief, performed overall coordination of the publication process. **Lillie M. Skinner**, **Enid J. Winters**, **Paula A. Capoen**, and **Harriet C. Lee** provided primary staff assistance.

The Economic Planning and Coordination Division, **Lawrence A. Blum**, Assistant Chief for Collection Activities and **Beverly M. Eng**, Assistant Chief for Post-Collection Activities, assisted by **Bernard J. Fitzpatrick**, Chief Mailout and Data Capture Branch, **Christopher L. Berbert**, Section Chief, assisted by **Mary P. Springer**, and **Richard E. Hanks**, Chief, Annual Survey Processing Branch were responsible for developing the systems and procedures for data collection, editing, review, and correction.

The staff of the National Processing Center, **Judith N. Petty**, Chief, performed mailout preparation and receipt operations, clerical and analytical review activities, data keying, and geocoding review.

The Economic Statistical Methods and Programming Division, **Howard R. Hogan**, Division Chief, developed and coordinated the computer processing systems.

Deborah L. Tasky, Assistant Chief for Annual Surveys and Related Programs, assisted by **Edward Bates, Jr.**, Chief, Manufacturing and Company Statistics Annuals Branch, and **Kenneth Keer**, Section Chief, supervised the preparation of the computer programs and was responsible for the design and implementation of the computer systems. **Cestine J. Gill** provided primary staff assistance.

Computer Services Division, **Kenneth Riccini**, Chief, performed the computer processing.

Kim D. Ottenstein, **Margaret A. Smith**, **Joyce Chamberlain**, and **Laurene V. Qualls** of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, provided publications and printing management, graphics design and composition, and editorial review for print and electronic media. General direction and production management were provided by **James R. Clark**, Assistant Chief, and **Gary J. Lauffer**, Chief, Publications Services Branch.

Introduction

SUMMARY OF 1999 SURVEY RESULTS

Pollution abatement capital expenditures amounted to \$5,809.9 million in 1999. Of this total, \$3,463.7 million was attributed to air, \$1,801.9 million to water, \$361.9 million to solid waste, and \$182.3 million to multimedia. Pollution abatement operating costs amounted to \$11,864.4 million in 1999. Of this total, \$5,069.1 million was attributed to air, \$4,586.5 million to water, \$2,013.3 million to solid waste, and \$195.5 million to multimedia. For complete definitions of pollution abatement capital expenditures and operating costs, see Appendix A.

Of the \$5,809.9 million in pollution abatement capital expenditures, the manufacturing subsector accounted for \$4,387.3 million, the mining subsector \$277.3 million, and the electric utility industry \$1,145.1 million. Of the \$11,864.4 million in pollution abatement operating costs, the manufacturing subsector accounted for \$10,240.3 million, the mining subsector \$458.9 million, and the electric utility industry \$1,163.8 million.

The industries with the highest capital expenditures in 1999 were industry 22111, Electric power generation, with \$1,145.1 million and subsector 325, Chemicals, with \$990.9 million. The industries with the lowest capital expenditures were subsector 315, Apparel manufacturing, with less than \$50 thousand and subsector 213, Support activities for mining, with \$1.6 million. The industries with the highest operating costs in 1999 were subsector 325, Chemicals, with \$2,808.0 million and subsector 324, Petroleum and coal product manufacturing, with \$1,697.9 million. The industries with the lowest operating costs were subsector 315, Apparel manufacturing, with \$1.8 million and subsector 314, Textile product mills, with \$4.9 million.

The regions with the highest capital expenditures in 1999 were the South Atlantic with \$1,177.2 million and West South Central with \$972.3 million. The regions with the highest operating costs were East North Central with \$2,687.7 million and West South Central with \$2,464.4 million.

SCOPE

The survey includes approximately 21,000 plants classified in manufacturing, mining and electric utility industries defined by the 1997 North American Industry Classification System (NAICS). For manufacturing, the survey covers

NAICS subsectors 311-339, for mining NAICS subsectors 211-213 and for electric utilities NAICS five-digit industry 22111.

SURVEY DESCRIPTION

The data in this report are from the 1999 Pollution Abatement Costs and Expenditure Survey conducted by the Census Bureau and sponsored by the Environmental Protection Agency. The survey is based on a national probability sample of manufacturing, mining, and electric utility plants. A detailed description of the sample design appears in Appendix C.

Data are obtained by means of a mailout/mailback form. The survey collects data on pollution abatement and prevention capital expenditures and operating costs for air, water, solid waste, and multimedia. The survey also collects data on disposal, recycling, site cleanup, habitat protection, environmental monitoring, and testing and administrative costs as well as other payments, such as permits, fees, fines, penalties, and tradable permits bought or sold.

During data review, all survey responses are subject to an editing process. This process is conducted to identify incomplete, inconsistent or incorrect data provided by respondents. These edits include logic, magnitude, and data verification.

Final estimates are based on response from approximately 83 percent of the survey panel.

SURVEY CHANGES AFFECTING HISTORIC COMPARISONS

The 1999 Pollution Abatement Costs and Expenditures (PACE) survey differs from earlier PACE surveys. While these changes prevent direct comparisons to earlier surveys, the changes were designed to better reflect industry terminology and enhance the accuracy of the survey estimates. Some notable differences are summarized below:

In 1997 the Standard Industrial Classification (SIC) manual was replaced by the North American Industry Classification System (NAICS). The 1999 sample was selected on a NAICS basis while the 1994 and prior years, was selected on an SIC basis.

For 1999 the survey sample included manufacturing, mining and electric utility industries, prior to 1999, these data were collected on a supplement to the PACE survey.

The 1999 sample also includes a small representation of plants with fewer than 20 employees. This group was omitted from previous PACE surveys. For a complete description of these changes see Appendix C.

For earlier surveys, pollution abatement was split into two categories, “end-of-line” and “production process enhancements.” While a similar distinction was made for the 1999 survey, the terms were changed to “pollution treatment” and “pollution prevention.”

Disposal and recycling are distinct categories for the 1999 PACE survey. For earlier surveys, these data were collected under pollution abatement and payments to government.

The 1999 PACE survey collects data on habitat protection, monitoring and testing, administrative expenses, permits, fees, fines, and penalties all of which were not collected in earlier surveys.

Earlier PACE surveys published estimates for states by major industry groups. These estimates are not shown for 1999.

LIMITATIONS OF THE DATA

The survey estimates presented in this report are subject to both sampling and nonsampling errors. A detailed description of each appear in Appendix B.

QUESTIONS CONCERNING THIS REPORT

Please direct questions to the U.S. Census Bureau, Manufacturing and Construction Division, Federal Office Building 4, Room 2135, Washington, DC 20233 or call the Special Studies Branch on 301-457-4683.

ABBREVIATIONS AND SYMBOLS

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual companies.
(NA)	Not available.
(X)	Not applicable.
(Z)	Less than half the unit shown.
NAICS	North American Industry Classification System.
PACE	Pollution abatement capital expenditures.
PAOC	Pollution abatement operating costs.
DRCE	Disposal and recycling capital expenditures.
DROC	Disposal and recycling operating costs.
PPEO	Pollution prevention expenditures and operating costs.
OE	Other expenditures.
OP	Other payments.

Table 1. Summary Pollution Abatement Capital Expenditures and Operating Costs by Subsector: 1999

Appendix A. MA-200 Report Form and Instructions

The MA-200 form and instructions are shown on the following pages.

POLLUTION ABATEMENT COSTS AND EXPENDITURES – 1999

NOTICE – Response to this inquiry **is required by law (Title 13, United States Code)**. By Section 9 of the same law, your report to the Census Bureau is **confidential**. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

In correspondence pertaining to this report refer to the **CENSUS ID NUMBER (ID) (11 digits)**

IMPORTANT

Please read instructions and definitions before completing form.

Please correct errors in name, address, and ZIP Code. ENTER street and number if not shown.

Item 1 OPERATIONAL STATUS

A. Check **ONE** box that best describes the facility listed on the form label as of December 31, 1999.

101 In operation

102 Temporarily idle → **How long?** 103

Months

104 Sold or leased to another company – *Enter date sold* →

Month	Year

 } **SOLD TO** →

Name			
Street			
City	State	ZIP Code	

106 Permanently ceased operations – *Enter date* → 107

Month	Year

B. Check **ONE** box that best describes this facility's pollution abatement and other environmental protection expenditures for 1999.

- 111 These expenditures were \$0 (zero) in 1999. (There were NO pollution abatement expenditures for 1999, because NO pollutants were released.)
- 112 These expenditures were included in rent, taxes, or lease agreements.
- 113 These expenditures occurred, but at no charge (used a scavenger service).
- 114 The expenditures were between \$1 and \$999.

}

You have no pollution or do not need to report any expenditures. **Please complete Item 9 of the form and return it.**

Thank you.

115 These expenditures were more than \$999. → **Continue with Item 2.**

Item 2 POLLUTION ABATEMENT, DISPOSAL AND RECYCLING

A. Pollution Abatement Activities

Indicate **(Mark (X))** those pollution abatement activities that occurred at this facility in 1999.

1. Abatement of air emissions through –

a. Physical techniques (gravity deposition, inertial separator, etc.)?

	Yes	No	Don't know
201	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

b. Biological techniques (biological filtration, activated sludge, phytoremediation, etc.)?

202	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

c. Chemical techniques (scrubbing, desulfurization, etc.)?

203	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

d. Thermal techniques (incineration, oxidation, etc.)?

204	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

2. Abatement or disposal of water discharge through –

a. Physical techniques (containment, screening, filtration, UV disinfection, etc.)?

205	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

b. Biological techniques (activated sludge dewatering, multiplate reactor, etc.)?

206	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

c. Chemical techniques (oxidation, reduction, coagulation, neutralization, etc.)?

207	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

d. Thermal techniques (incineration, drying, distillation, etc.)?

208	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

3. Abatement or disposal of solid wastes through –

a. Physical techniques (containment, dehydration, screening, landfilling, underground injection well, etc.)?

209	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

b. Biological techniques (composting, landfarms, etc.)?

210	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

c. Thermal techniques (incineration, pyrolysis, etc.)?

211	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-----	--------------------------	--------------------------	--------------------------

B. Pollution Abatement Costs and Expenditures by Medium

Report total pollution abatement costs and expenditures. Also report the percentage of the total capital expenditures and operating costs that are for hazardous emissions, discharges, or wastes. To avoid double counting, please record expenditures in one media category only. Report the total capital expenditures and NOT the financed or depreciated amount.

(REPORT DOLLARS IN THOUSANDS.)

What were the TOTAL pollution abatement costs and expenditures for this facility in 1999 for –

1. Abatement of air emissions?

	Pollution abatement capital expenditures	Pollution abatement operating costs	Information not available or not collected to provide an estimate
220	\$ 000	230 \$ 000	240 <input type="checkbox"/>

What percent of expenditures and costs were for hazardous air emissions?

221	%	231 %	241 <input type="checkbox"/>
-----	---	-------	------------------------------

2. Abatement of water discharges?

222	\$ 000	232 \$ 000	242 <input type="checkbox"/>
-----	--------	------------	------------------------------

What percent of expenditures and costs were for hazardous water discharges?

223	%	233 %	243 <input type="checkbox"/>
-----	---	-------	------------------------------

3. Abatement of solid wastes?

224	\$ 000	234 \$ 000	244 <input type="checkbox"/>
-----	--------	------------	------------------------------

What percent of expenditures and costs were for hazardous solid wastes (including mixed wastes)?

225	%	235 %	245 <input type="checkbox"/>
-----	---	-------	------------------------------

4. Abatement of multi-media pollutants?

226	\$ 000	236 \$ 000	246 <input type="checkbox"/>
-----	--------	------------	------------------------------

What percent of expenditures and costs were for hazardous multi-media pollutants (including mixed wastes)?

227	%	237 %	247 <input type="checkbox"/>
-----	---	-------	------------------------------

Item 2 POLLUTION ABATEMENT, DISPOSAL AND RECYCLING – Continued

C. Disposal and Recycling Costs and Expenditures

Report on-site and off-site disposal and on-site (post process) and off-site recycling costs and expenditures in the appropriate categories below.

(REPORT DOLLARS IN THOUSANDS.)

1. On-site and off-site disposal?

Disposal capital expenditures	Disposal operating costs	Information not available or not collected to provide an estimate
250	260	290
\$ 000	\$ 000	<input type="checkbox"/>

What percent of expenditures were for disposal of hazardous pollutants (including mixed wastes)?

251	261	291
%	%	<input type="checkbox"/>

2. On-site (post process) and off-site recycling?

Recycling capital expenditures	Recycling operating costs	Information not available or not collected to provide an estimate
270	280	292
\$ 000	\$ 000	<input type="checkbox"/>

Item 3 POLLUTION PREVENTION

A. Indicate **(Mark (X))** those pollution prevention activities that occurred at this facility in 1999.

1. Process or procedure modifications?

Yes	No	Don't know
301 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

2. Redesign or reformulation of products?

302 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

3. Substitution or modification of equipment or technologies?

303 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

4. In-process recycling, recovery, recirculation, and reuse of materials?

304 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

5. Substitution of raw materials?

305 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

6. Improvements or modifications to housekeeping, maintenance, training or inventory control?

306 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

7. Improvements or modifications to prevent leaks and spills?

307 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

8. Other? *Specify in the "Remarks" section, Item 9.*

308 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
------------------------------	--------------------------	--------------------------

B. If you check YES to any of the activities, report the total (e.g., capital, operating) costs and expenditures for these activities.

(REPORT DOLLARS IN THOUSANDS.)

Amount	Information not available or not collected to provide an estimate
310	311
\$ 000	<input type="checkbox"/>

Item 4 OTHER ENVIRONMENTAL PROTECTION EXPENDITURES

Report the amount of other environmental protection expenditures in the appropriate categories below.

(REPORT DOLLARS IN THOUSANDS.)

What were TOTAL environmental expenditures for this facility in 1999 for –

A. Site cleanup through –

1. Remediation, including Superfund sites?

Amount	Information not available or not collected to provide an estimate
401	411
\$ 000	<input type="checkbox"/>

2. Replacement of leaking or inferior USTs?

402	412
\$ 000	<input type="checkbox"/>

3. Other?

403	413
\$ 000	<input type="checkbox"/>

B. Habitat protection?

404	414
\$ 000	<input type="checkbox"/>

C. Environmental monitoring and testing?

405	415
\$ 000	<input type="checkbox"/>

D. Administration of environmental programs?

406	416
\$ 000	<input type="checkbox"/>

Item 5 REASON FOR ENVIRONMENTAL PROTECTION EXPENDITURES				
		Yes	No	Don't know
Did this facility participate in any voluntary programs? (Refer to instructions for examples.)		501 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Item 6 TAX CREDITS AND SUBSIDIES				
Report if you receive any tax credits or subsidies as a result of any of the expenditures in Items 2 through 4. The tax credit or subsidy must be the result of a pollution abatement or other environmental expenditure and may be for capital and/or operating expenses. For example, a facility may receive a state tax credit for the use of recycled materials in their manufacturing process or for the additional labor employed as a result of incorporating recycling into the manufacturing process. Or, a facility may receive a purchase preference (subsidy) for using a certain percent of recycled content in the final product.				
		Yes	No	Don't know
Did the facility receive tax credits or subsidies?		601 <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Item 7 OTHER PAYMENTS				
Report the amount of other payments in the appropriate categories below. <i>(REPORT DOLLARS IN THOUSANDS.)</i>		Amount	Information not available or not collected to provide an estimate	
A. Payments to government through –		701	711	
1. Permits, fees, and charges?		\$ 000	<input type="checkbox"/>	
2. Fines and penalties?		702 \$ 000	712 <input type="checkbox"/>	
3. Other?		703 \$ 000	713 <input type="checkbox"/>	
B. Tradable permits –		704	714	
1. Bought?		\$ 000	<input type="checkbox"/>	
2. Sold?		705 \$ 000	715 <input type="checkbox"/>	
3. Other?		706 \$ 000	716 <input type="checkbox"/>	
Item 8 BURDEN				
		Number of hours	Information not available or not collected to provide an estimate	
Estimate the number of hours it took to complete this form.		801	802	<input type="checkbox"/>
Item 9 CERTIFICATION				
Please provide information on the person to contact regarding this report, as well as the name, signature and title of a person who verified that the information reported in this survey is accurate. The authorizing official may be a plant manager, vice president or environmental health and safety official. Also, feel free to add any additional comments in the space provided below. Thank you.				
Name of person to contact regarding this report <i>(Please print)</i>		901	Telephone 902	
		Area code	Number	Ext.
Signature of authorized official		Title		Date
Remarks 910

1999 SURVEY OF POLLUTION ABATEMENT COSTS AND EXPENDITURES

GENERAL INSTRUCTIONS

SCOPE

This annual survey collects new capital expenditures and annual operating expenses for pollution prevention and treatment in manufacturing, mining, and electric utility industries. In addition, this survey collects payments for off-site recycling, waste disposal, and expenditures for other environmental activities such as site reclamation, habitat protection, and monitoring and testing. Finally, the survey collects payments to government in the form of charges, permits and fines, and payments, paid or received, for emissions trading.

The statistics from this survey are mainly used to enable the Environmental Protection Agency to better satisfy legislative and executive requirements to track the costs of regulatory programs and to provide meaningful statistics to a variety of users. Some data users include: other Federal agencies, state and local governments, trade associations, manufacturers, marketing and research companies, universities, financial and environmental institutions, and environmental reporters.

AUTHORITY and CONFIDENTIALITY

Response to this inquiry is required by law (Title 13, U.S. Code). By Section 9 of Title 13, U.S. Code, your report to the Census Bureau is **confidential**. It may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. The data can not be used for regulation or enforcement. Copies of your report retained in your files are immune from legal process.

WHO SHOULD REPORT

This report is required only for the facility located in the address box on the form. If your company operates more than one location, **REPORT ONLY FOR THE PLANT(S) SELECTED FOR THIS SURVEY. DO NOT COMBINE** with other facilities in your company even though operations may jointly use the same pollution abatement facilities. When this occurs, apportion the costs and expenditures according to the rate of pollution abatement equipment utilization or the relative amounts of pollutants produced.

HOW TO REPORT

Answer all questions. If you can not answer a question from your plant records, please estimate the answer carefully. In some cases, identification of pollution abatement expenditures may require the joint efforts of your facility's financial and environmental staff. Report all value figures in thousands of dollars. Report data for the calendar year. If you are unable to provide estimates because your facility does not keep the necessary records or the records are unavailable (i.e. in storage or archived), please mark the "Information Not Available or Not Collected to Provide an Estimate" box. If your fiscal year ends between October 31 and February 28, fiscal year figures are acceptable.

This booklet contains general definitions and specific instructions for each item. Each item's instructions include a guide listing examples of expenditures. In most cases these lists will provide sufficient information for completing this survey form.

HOW TO REPORT – Continued

For further details or definitions, see the following acts:

Clean Air Act and Amendments
Clean Water Act and Amendments
Resource Conservation and Recovery Act and Amendments
Pollution Prevention Act of 1990
Comprehensive Environmental Responses, Compensation, and Liability Act
Superfund Amendments and Reauthorization Act
Safe Drinking Water Act
Atomic Energy Act

To purchase copies of recent amendments to these acts request "Committee Print 103-B" from the:
Superintendent of Documents,
Government Printing Office,
Washington, DC 20402,
or call 202-512-1800.

This survey is directed to manufacturing, mining, and electric utility industries operations. The information requested supplements the data collected in the Annual Survey of Manufactures. If you think that your facility is **not a manufacturing, mining, or electric utility establishment**, call the Special Studies Branch on 301-457-4659.

If you have **questions** or **suggestions** regarding this report, please call the Special Studies Branch on 301-457-4659. Please refer to the Census Bureau ID number (the 11-digit number above the facility name in the address box) when calling or in written correspondence.

NAME AND ADDRESS

Review the name and address of this facility printed in the top right corner of the report form. Line out any errors and make any necessary corrections or additions in the address box.

WHEN TO REPORT

Complete the form and return it by the date indicated on the top of the form in the enclosed prepaid envelope to:

U.S. Census Bureau
1201 East 10th Street
Jeffersonville, IN 47132-0001

If you need **additional time** to complete the report or if you need a **duplicate form**, please phone our Jeffersonville office on **812-218-3331**.

RESPONSE TIME

Public reporting burden for this collection of information is estimated to vary from 2 hours to 20 hours per form (with an average of 4.5 hours), including time for reviewing instructions, searching existing data sources, gathering the data needed, and completing and reviewing the collection of information. Send **comments** regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Associate Director for Finance and Administration, Paperwork Reduction Project (0607-0175), Room 3104, FB 3, U.S. Census Bureau, Washington, DC 20233-0001.

ELECTRONIC REPORTING

For **information** concerning the possible use of reporting formats other than the form provided, such as computer tape or printouts, please contact our Special Studies Branch on 301-457-4659.

PUBLICATION OF RESULTS OF THIS SURVEY

Industry estimates are tabulated and published in the Current Industrial Report, Pollution Abatement Costs and Expenditures, MA-200. You may obtain a copy online at: <http://www.census.gov/mcd>. To have a copy of the publication sent to you via email, contact us at mcdinfo@census.gov. If you require further assistance, you may contact the Forms Publications and Customer Services Branch on (301) 457-4673.

GENERAL DEFINITIONS

These definitions are for the purposes of this survey only and are not intended to be representative of official federal, state, or local regulatory language. In certain cases the definitions may be similar to those found in a particular rule or regulation, however, for the purposes of this survey, please use the terms as they are defined below.

Pollution is the presence of a substance in the environment that, because of its chemical composition or quantity, prevents the functioning of natural processes and produces undesirable environmental and/or human health effects. For the purposes of this survey, consider only the release of pollutants that are either used in, or by-products of, the production process.

Pollution abatement is the reduction or elimination of pollution that is created by the production process and has the potential to produce undesirable environmental and/or human health effects or the removal of pollution created by prior years' production. Pollution abatement activities include pollution treatment, pollution prevention, recycling, and/or disposal in an environmentally sound manner. **For this survey, include only those expenditures with the primary purpose of protecting the environment.** While certain expenditures may have multiple benefits, only consider those expenditures where environmental protection is the primary purpose. This survey does not collect expenditures intended to meet worker safety and health requirements. It also does not include expenditures that abate pollution when the primary purpose is to increase profits or efficiency, and the environmental protection is a side benefit.

Pollution abatement is any method, technique, or process designed to remove pollutants, after their creation, from air emissions, effluents, and/or solid waste. In general, pollution abatement includes the use of retrofit technologies, pollution management activities, and contract services (on-site or off-site) that are designed to change the physical, chemical, or biological character or composition of any hazardous substance, pollutant, or contaminant entering any waste stream or otherwise released to the environment (including fugitive emissions) so as to render such waste nonhazardous, or less hazardous, safer to transport, store or dispose. These activities are commonly referred to as **pollution treatment**, or end-of-pipe activities. Pollution treatment occurs after recycling.

Pollution prevention includes the selection and use of technologies, inputs, or practices that reduce or eliminate the creation of pollutants. Pollution prevention includes equipment or technology modifications, process or procedure modifications, reformulation or redesign of products, in-process recycling, recirculation or reuse of materials, substitution of raw materials, improvements or modifications to housekeeping, maintenance, training, or inventory control, and prevention of spills and leaks. Pollution prevention can be an inherent part of the production process, in which case production and pollution prevention may be said to occur jointly in an "integrated process." However, for the purposes of this survey, in order for any expenditures to be attributed to pollution prevention the integrated process must have been selected primarily for environmental protection, i.e., an alternative production process would have been chosen absent this consideration.

Disposal, in an environmentally sound manner, is the final placement, destruction or disposition of waste after pollution abatement or recycling has occurred. For example, solid waste is often managed by landfill disposal and certain liquid wastes may be disposed of using injection wells. For the purposes of this survey only, disposal expenditures associated with municipal solid waste (e.g., office and cafeteria trash) should not be reported.

Recycling is the off-site processing or on-site (post-process) processing of waste for an alternative use. Recycling includes recovering liquid, solid, or gaseous wastes and reusing them in the same or another production process and partially reclaiming materials (e.g., drying materials that contain recoverable metals for the purposes of enhancing a subsequent recovery activity). Activities that closely resemble abatement for the purposes of destruction or disposal, and burning waste materials for fuel are not included in this category. This activity is to be considered distinct from pollution prevention, which can involve the redirection of "used" material inputs, that would otherwise be wasted, back into the production process (also called in-process recycling).

GENERAL DEFINITION – Continued

TYPES OF COSTS

Pollution abatement capital expenditures include installation and retrofit that occurred during 1999 for separately identifiable methods, techniques, or process technologies installed exclusively for the purpose of removing pollutants after their creation, from air emissions, water discharges, and/or solid waste or expenditures for technologies that reduce or eliminate the creation of pollutants. Include the total expenditures for pollution abatement. However, for the purposes of Item 2, exclude expenditures associated with pollution prevention activities (report pollution prevention expenditures in Item 3B).

Pollution abatement operating costs: Annual costs for operating and maintaining all pollution abatement technology. Include all costs of materials and fuels, salaries and wages, leasing and contract work and services for pollution abatement. However, for purposes of Item 2, exclude costs associated with pollution prevention activities (report pollution prevention costs in Item 3B).

MEDIUM AND POLLUTANT TYPES

This survey collects expenditures by the pollutants affecting each medium (e.g., air emissions, water discharges, solid wastes) that would be affected if the pollutants were not abated.

Air pollutants are any substances released into the air that could, in high enough concentration, pose a threat to the environment and/or human health.

- **Hazardous air pollutants** are those regulated under Section 112 of the Clean Air Act, including metals, other particles, gases absorbed onto particles, and certain vapors from fuels and other sources. Examples include emissions of toluene, benzene, methanol, chlorine, and vinyl chloride. For the purposes of this survey, lead and lead compounds fall under this category.
- **Nonhazardous air pollutants** include the various criteria air pollutants and their precursors (except lead). Examples include emissions of particulate matter, sulfur dioxide, nitrogen oxide, carbon monoxide, and volatile organic compounds (VOCs). This category also includes Section 111-d designated air pollutants, e.g., total reduced sulfur compounds.

Water pollutants are any substances or pathogens released into water that could, in high enough concentration, pose a threat to the environment and/or human health.

- **Hazardous water pollutants** are those listed by the Clean Water Act, including toxic metals, toxic inorganic compounds, and toxic organic compounds. Examples of toxic metals and inorganic compounds include antimony, arsenic, beryllium, cadmium, chromium, copper, cyanide, lead, mercury, nickel, silver, thallium, and zinc. Examples of organic compounds include benzene, chloroethane, toluene, and xylene.
- **Nonhazardous water pollutants** include discharges of nutrients, fecal coliform, and suspended solids, as well as adverse changes in temperature and pH balance.

Solid wastes are any discarded materials, including solid, liquid, semi-solid, or contained gaseous materials, that pose a threat to the environment and/or human health by contaminating soil and groundwater.

- **Hazardous solid wastes** are by-products of production that can pose a substantial or potential hazard to the environment and/or human health when improperly managed. As defined within the Resource Compensation and Recovery Act (RCRA) Subtitle C, hazardous solid wastes possess one or more of the following characteristics: ignitability, corrosivity, reactivity, toxicity, appear on special EPA lists, or are designated as hazardous under state hazardous waste laws. Mixed wastes are defined as any waste containing both RCRA Subtitle C hazardous waste and radioactive waste. The expenditures associated with mixed wastes are to be included with hazardous waste expenditures.

GENERAL DEFINITIONS – Continued

- **Nonhazardous industrial solid wastes** (Industrial D wastes) are wastes that are neither municipal wastes nor wastes that are currently identified as hazardous wastes under RCRA Subtitle C. Nonhazardous industrial wastes (Industrial D wastes) consist primarily of manufacturing process wastes, including wastewater and non-wastewater sludges and solids.

Multi-media activities comprise the remaining pollution abatement category and are simply those expenditures not attributable primarily to one type of pollution or that deal with pollution affecting more than one medium.

ITEM BY ITEM INSTRUCTIONS

ITEM 1: OPERATIONAL STATUS

- A.** Check the **ONE** that best describes the facility listed on the form label as of December 31, 1999.

Temporarily idle, for the purposes of this survey, is defined as seasonal, shutdown for maintenance, on strike, not operating due to bad weather, etc.. Temporarily idle plants intend to resume operations again. In other words, the facility has not been sold, dismantled, or permanently ceased operations.

- B.** Check the **ONE** box that best describes this facility's pollution abatement and other environmental protection expenditures for 1999.

ITEM 2: POLLUTION ABATEMENT, DISPOSAL, AND RECYCLING

A. Pollution Abatement Activities

Indicate (check) those pollution abatement activities that occurred at the facility in 1999.

B. Pollution Abatement Costs and Expenditures by Medium

Report total pollution abatement costs and expenditures. Also report the percentage of the total capital expenditures and operating costs that are for hazardous (including mixed) emissions, discharges, or wastes. To avoid double counting, please record expenditures in one media category only. Report the total capital expenditures and NOT the financed or depreciated amount. Payments for site services that involve both treatment and disposal should be allocated to each category according to the total cost attributable to each activity. If it is not possible to allocate the costs in this manner, record the total treatment and disposal costs under pollution abatement.

Include costs and expenditures for

- pollution abatement and disposal activities attributed to air, water, and solid wastes (Item 2.B.1, 2.B.2, and 2.B.3, respectively)
- pollution abatement activities not readily attributable to a single environmental medium (Item 2.B.4)
- on-site and off-site landfill disposal and on-site (post process) and off-site recycling (Item 2.C)
- payments to a private or government contractor for solid waste disposal (Item 2.C)
- activities that occurred in 1999 only

Exclude costs and expenditures for

- pollution prevention (report in Item 3.B), other environmental protection expenditures (report in Item 4), and other payments (report in Item 7)
- health, safety, aesthetics, or employee comfort (OSHA)
- research and development services
- manufacture of pollution treatment equipment for sale
- insurance

ITEM BY ITEM INSTRUCTIONS – Continued

ITEM 2: POLLUTION ABATEMENT, DISPOSAL AND RECYCLING – Continued

Illustrative Examples:

- The costs to use an injection well to dispose of liquid waste are reported in 2.C.
- A facility installs a scrubber to treat air pollutants. The capital and operating costs associated with the scrubber are reported under 2.B.1.
- The costs for hazardous waste abatement and disposal are allocated to the abatement and disposal categories, if possible, according to the portion of the total costs attributable to each activity. If this is not possible, then the total costs are reported in Item 2.B.3.

C. Disposal and recycling costs and expenditures

Report on-site and off-site disposal costs and expenditures and on-site (post-process) and off-site recycling in the appropriate categories.

ITEM 3: POLLUTION PREVENTION

A. Indicate (check) those pollution prevention activities that occurred at the facility in 1999.

Examples of Pollution Prevention Activities

- Equipment or technology modifications
- Process or procedure modifications
- Reformulation or redesign of products
- In-process recycling, recirculation, or reuse of materials
- Substitution of raw materials
- Improvements or modifications to housekeeping, maintenance, training, and inventory control
- Prevention of spills and leaks

B. If you checked YES to any of the activities, report the total (e.g., capital, operating) costs and expenditures for these activities.

ITEM 4: OTHER ENVIRONMENTAL PROTECTION EXPENDITURES

Site cleanup is the remediation of contamination due to leaks, spills, waste disposal, or other releases from current or past on-site production processes.

Habitat protection is the maintenance, protection, and restoration of areas vital to populations, or communities of sensitive or valuable plant or animal life that could be damaged as a result of pollution at the facility. Wetlands mitigation banking (Clean Water Act, Section 404) and actions undertaken to comply with the Endangered Species Act may be reasons for habitat protection expenditures.

Report the amount of other environmental protection expenditures in the appropriate categories. Report expenditures in one category only (i.e., if you report expenditures for the categories below elsewhere in the survey, then do not also report them here).

Include expenditures for:

- operation and maintenance of Superfund site (Item 4.A.1)
- replacement of leaking or inferior underground storage tanks (USTs) (Item 4.A.2)
- cleanup of leaks and spills of hazardous substances (Item 4.A.3)
- wetlands mitigation banking and riparian buffer strips (Item 4.B)
- testing and monitoring of emissions or wastes (Item 4.C)
- environmental auditing (Item 4.D)
- salaries and wages for time spent completing environmental reporting requirements, training, and preparing documents related to environmental protection (Item 4.D)
- developing pollution abatement operating procedures (Item 4.D)

Exclude expenditures for:

- pollution abatement, disposal, and recycling (report in Item 2) and pollution prevention (report in Item 3.B)
- health, safety, aesthetics or employee comfort (OSHA)
- permits, fees, and charges (report in Item 7.A.1)
- fines and penalties (report in Item 7.A.2)
- other payments to government (report in Item 7.A.3)
- emissions trading programs (report in Item 7.B)

ITEM BY ITEM INSTRUCTIONS – Continued

ITEM 5: REASON FOR ENVIRONMENTAL PROTECTION EXPENDITURES

There are governmental and private sector environmental management initiatives that are not associated with enforceable regulatory requirements, but rather are a result of the promotion of voluntary measures to reduce pollution emissions and encourage waste minimization. Some examples of voluntary programs include Green Lights, Energy Star, WasteWise, the 33/50 Program, Environmental Leadership Programs, Water Alliances for Voluntary Efficiency (WAVE), and Climate Wise.

Check the appropriate box indicating if any of the expenditures reported in Items 2 through 4 were voluntary (NOT MANDATED by enforceable government rules or regulations).

ITEM 6: TAX CREDITS AND SUBSIDIES

Report whether you receive any tax credits or subsidies as a result of any of the expenditures in Items 2 through 4. The tax credit or subsidy must be the result of a pollution abatement or other environmental expenditure and may be for capital and/or operating expenses. For example, a facility may receive a state tax credit for the use of recycled materials in their manufacturing process or for the additional labor employed as a result of incorporating recycling into the manufacturing process. Or, a facility may receive a purchase preference (subsidy) for using a certain percent of recycled content in the final product.

ITEM 7: OTHER PAYMENTS

Report the amount of other payments in the appropriate categories.

Include expenditures for:

- payments to governments for expenditures not reported in Items 2-4 (Item 7.A)
- other expenditures as a result of penalties, such as payments for supplemental environmental projects (Item 7.A.3)
- nitrous oxide (NO_x) and sulfur dioxide (SO₂) trading programs (Item 7.B)

Exclude expenditures for:

- pollution abatement, disposal, and recycling (report in Item 2), pollution prevention (report in Item 3.B), and other environmental protection expenditures (report in Item 4)
- health, safety, aesthetics, or employee comfort (OSHA)

ITEM 8: BURDEN

Estimate the number of hours it took to complete this form.

ITEM 9: CERTIFICATION

Please provide the name and telephone number of the person to contact regarding this report, as well as the name, signature, and title of a person who verified that the information reported in this survey is accurate. This authorizing official may be a plant manager, vice president, or environmental health and safety official. Also, feel free to add any additional comments in the space provided. Thank you.

Appendix B.

Qualifications of the Data

SAMPLING ERRORS

The survey estimates presented in this report are subject to sampling errors. The panel for this survey was sampled using probabilities that varied depending on the size of the establishment. Independent samples were chosen for each North American Industry Classification System (NAICS) industry subject to the constraint that the overall sample size was fixed at about 21,000 establishments, but the probability assignments were designed to control not only the allocation of the sample by industry, but also by geographic region. As a result of these multiple controls, the final probabilities are not exactly proportionate to the measures of size used as a basis for these controls. Also, because the sampling was done by industry, the sampling program used ensured that the expected sample size for a given industry was exactly realized. It did not ensure that the expected sample size for a given region was met, however.

The particular sample selected was but one of many similar probability samples that could have resulted using this sampling methodology. Each of the possible samples would yield somewhat different sets of results. The sampling errors—the differences between the estimates obtained from the sample actually selected and the results theoretically obtainable from a comparable complete canvass of the same target universe—are unknown. However, the estimated standard errors of the survey estimates are guides to the potential size of the sampling error.

The estimated standard error of a survey estimate may be used to define a confidence interval about that estimate such that the complete coverage result will be included within that interval with known probability. As examples:

1. The interval defined by one standard error below the estimate to one standard error above contains the complete coverage result with approximately 67 percent confidence.
2. The interval defined by two standard errors below the estimate to two standard errors above contains the complete coverage result with approximately 95 percent confidence.

3. The interval defined by three standard errors below the estimate to three standard errors above contains the complete coverage result with approximately 99 percent confidence.

Thus, an inference that the complete coverage result lies within the indicated intervals would, with the prescribed confidences, be correct. For example, if an estimated total is 100 with an associated standard error of 5, there is approximately 67 percent confidence that the interval of 95 to 105 includes the complete coverage result, about 95 percent confidence that the interval of 90 to 110 includes the complete coverage result and approximately 99 percent confidence that the interval of 85 to 115 includes the complete coverage result.

In the tables, only relative standard errors are presented. A relative standard error is the standard error of the estimate divided by the estimate. Thus, to obtain the standard error, take the product of the relative standard error and the estimate.

NONSAMPLING ERRORS

Nonsampling errors include various response and operational errors; errors of collection, reporting, transcription, and bias due to nonresponse, etc. These errors would also occur if a complete canvass were conducted under the same conditions as this survey. Most of the important operational errors were detected and corrected in the course of the review of the data for reasonableness and consistency. Explicit measures of the nonsampling errors are not available. Estimated standard errors do provide a guide to the size of the sampling error. The total error most likely will exceed the standard error measures.

Although the survey respondents were provided detailed instructions for estimating pollution abatement costs and expenditures (see Appendix A), it is extremely difficult to translate the concept of pollution abatement activity into a working definition that is applicable to all industries and situations.

As a result of the aforementioned qualifications, the following limitations should be considered when using the PACE estimates:

1. Prior to 1999, the most recent PACE survey was conducted in 1994. Due to the significant time lapse between surveys and the redesign of the 1999 questionnaire caution should be taken when comparing the estimates for 1999 to any previous PACE estimates.
2. The form design for the 1999 PACE survey provided checkbox options for all items (see form in Appendix A). The checkboxes allowed respondents to indicate the information was not available or not collected to provide estimates (see Item 2B). An attempt was made to account for these cases through nonresponse weight adjustment (see Appendix C for a detailed explanation of the adjustment).
3. The design of the 1999 form allowed respondents to indicate that they were performing pollution abatement activities through the use of the checkboxes (Item 2A) without providing an estimate for the activity. These respondents were targeted for imputation. Imputation was conducted for operating costs only, because of the continuous annual characteristic of this item. Although other items were easily identified for imputation, there was no method that could accurately estimate activities on a plant-by-plant basis. For these reasons, all other types of pollution abatement activity, with the exception of operating costs, should be treated as lower bounds. (For detailed explanation of imputation, see Appendix C.)

Appendix C.

Description of Survey Sample, Estimation Procedure, and Imputation Procedure

SURVEY SAMPLE

The 1999 estimates presented in this report are based on a newly selected probability sample originally consisting of about 21,000 establishments. All manufacturing and mining industries are included in scope of the survey along with the electric power generating industry. Prior to the 1999 survey, the pollution abatement costs and expenditures (PACE) survey was last conducted for survey year 1994. There are significant differences in the design and selection of these two panels. Foremost is the conversion from the Standard Industrial Classification (SIC) system to the North American Industry Classification System (NAICS). Under NAICS, some activities are newly classified as manufacturing, while previous manufacturing activities are now classified as nonmanufacturing. Thus, the actual coverage of the survey has changed slightly because of this switch. In addition, the apparel and textile industries, which were previously excluded from the survey, are now included. Also, in the earlier PACE surveys, the mining and electric power generating industry data were obtained from a separate and nonprobability survey source (Plant and Equipment Survey), which is no longer conducted. For 1999, these industries were sampled under probability guidelines and processed fully as part of the PACE survey.

The manufacturing frame for the 1999 survey was created from the 1997 Census of Manufactures supplemented with 1998 birth establishments (i.e., plants not in existence at the time of the census). Administrative record cases, which are the very small establishments not mailed for the census, were excluded from the frame. Included, however, were nonadministrative record establishments with employment less than 20. In previous surveys, these size establishments were excluded because studies had shown that the magnitudes of their pollution abatement costs and expenditures were insignificant. To ascertain whether this assumption still was valid, a small sample of these smaller establishments was included in the 1999 panel. The frame for the mining universe was created in similar fashion from the Census of Mining database and subsequent births. Total value of shipments—to be used as a measure of size in the sampling operation—was included as part of the frame record for every establishment in both frames. The total frame size for these two sectors was about 235,000 establishments.

The frame for the electric utilities industries was identified in its entirety from the 1999 Standard Statistical Establishment List (SSEL) from NAICS industries 221111, 221112,

221113, and 221119. About 2,000 establishments were identified. Total payroll was included in each frame record as a measure of size for the sampling operation.

Probability assignment for each unit of the sampling frame was based on the unit measure of size and was designed to optimally allocate the sample based on industry and geographic constraints that were consistent with the overall sample size limitation of 21,000 establishments. The U.S. Census Bureau has developed a program based on a method by Chromy (see Census Bureau publication, Economic Statistical Methods Report Series ESM-9502 June 1995, Chromy-Gen: General-Purpose Program for Multivariate Allocation of Stratified Samples Using Chromy's Algorithm) that provides a solution to the multiple constraint problem. To determine industry constraints, the NAICS-6 industries were partitioned into three priority strata based on the 1994 survey results. For manufacturing industries, only those plants with employment of at least 20 employees were included in these strata. The three strata were high priority industries (expenditures exceeding \$10 million), medium priority industries (expenditures between \$1 million and \$10 million), and low priority industries (expenditures below \$1 million). To do this, 1994 SIC-4 codes were mapped to NAICS-6 codes. Since there is no one-to-one correspondence between the two, rules were developed for assigning NAICS codes not equivalent to unique SIC codes to one of the three priority partitions. Finally, we set industry relative standard error constraints (based on the measure of size variable) by partition, that is, all industries within a given partition received the same constraint. These constraints, initially arbitrary, were set progressively tighter for low, medium, and high priority industries, respectively. The set of manufacturing plants with employment below 20 was treated as a separate stratum and assigned a relative standard error constraint for use in the Chromy program consistent with a predetermined small sample size that was desired from this stratum. One other stratum was created. This consisted of records in the census files whose assigned NAICS industry codes were incomplete. For coverage purposes, it was desired to sample a small number of these unclassifieds. A relative standard error constraint consistent with this sample size was determined for the Chromy program.

A second set of constraints was next established so as to insure sample representation by census geographic region. For this analysis, the sampling frame was partitioned into census region by NAICS-3 strata. There are

nine census regions, but an additional region to distinguish offshore activity in the Mining sector was created. As before, somewhat arbitrary relative standard error constraints were established for input to the Chromy program.

With the above sets of constraints serving as input, the Chromy program was run. This program determines optimal probabilities based on the measures of size that satisfy all the input constraints. In general, within a given area of control, establishments with larger measures of size will receive larger probabilities, but this relationship is not exactly proportional because of the fact that multiple constraints are involved. Under the initial constraints, the sample size implied by the probability assignment did not equal the total desired sample size of about 21,000 plants. Thus, the Chromy program was run a multiple number of times, and each time certain constraints were modified until the expected sample size “converged” to the desired number. At this point, an adjustment was made to assigned probabilities that fell below a certain minimum value. This adjustment, which reset the original probabilities to this minimum value, was made to guard against exceedingly large sample weights (the inverse of the probabilities of selection) being assigned to selected companies. If this occurred and the sampling unit reported data in excess of what was anticipated based on the unit measure of size, the survey estimates could be adversely affected. For the PACE survey, the minimum probability value was set to 0.01 (maximum weight = 100). The minimum probability rule resulted in a slight increase in the expected sample size.

The sampling program used to select the 1999 PACE survey was a fixed sample size program that accommodated unequal probabilities of selection. Fixed means that the expected sample size for any sampling stratum is exactly realized in any running of the program. Sampling was performed independently for each NAICS-6 industry. For manufacturing industries, the plants with less than 20 employees were included for sampling purposes in their appropriate NAICS-6 stratum. The unclassified stratum was sampled independently as well. It should be noted that although geographic controls contributed to probability assignment, the fact that the actual sampling was done by industry stratum means that the expected sample allocation by geographic region and state was not assured. A sample of 21,077 establishments was selected.

ESTIMATION PROCEDURE

Survey responses fell into three categories. The first category was complete nonrespondents. These establishments provided no usable data; that is, they either returned a blank form or they failed to return the form at all. The second category included partial respondents. Partial respondents provided data for some items but not all, in particular, operating costs for pollution abatement were

not reported. The third category included complete respondents. All estimated totals shown in this report are simple weighted estimates and are based upon survey respondents only, categories two and three.

1. Weight Adjustment for Complete Nonrespondents

We accounted for the complete nonrespondents in the survey estimates by adjusting the original sample weights for the reported cases. An adjustment factor was computed for each sampling stratum (NAICS-6 industry) as the ratio of a weighted variable based on the entire industry sample to the same weighted variable based on reported cases only. The inverse of the ratio is a measure of the industry coverage provided by the respondents based on the variable chosen. Total value of shipments (TVS) was chosen as the coverage variable for the manufacturing and mineral industries since it was available for all sample cases and was correlated well enough with operating costs to provide a meaningful measure of the survey coverage provided by the reported cases. Payroll (PR) was used as the coverage variable for the electric utility industries.

2. Imputation of Partial Respondents

Checkbox information completed in Item 2A for the partial respondents allowed us to determine which establishments were more likely to have operating costs imputed. Therefore, to maximize the use of reported data, we imputed these missing data for the partial respondents and for estimation purposes treated these establishments as complete reporters. The imputation of item data for partial respondents was limited to the missing values of operating costs both total and hazardous for Item 2B (Pollution Abatement Costs and Expenditures by Medium) and the missing values of operating costs both total and hazardous for Item 2C (Disposal and Recycling Costs and Expenditures). When one of these missing items was identified for imputation, a ratio based on survey respondents for that missing item to the measure of size variable (TVS or PR) was used. The numerator of this ratio was the sum of the weighted item value, and the denominator was the sum of the weighted measure of size. The actual ratio used in a particular imputation was the first ratio in a sequence of possible ratios that satisfied a minimum criterion regarding the number of establishments comprising the ratio. It was specified that at least 5 units must be included in the ratio calculation. Because the relations defined by the ratios are sensitive to state location, the first preferences were to use ratios involving the state of the establishment being imputed. Thus, a sequence of eight ratios was established as follows: NAICS-6 X St, NAICS-5 X St, NAICS-4 X St, NAICS-6 X US, NAICS-5 X US, NAICS-4 X US, NAICS-3 X St, NAICS-3 X US. Once

the proper imputation ratio was determined, then the impute for the item was made by multiplying this ratio by the measure of size value for the establishment.

3. Calculation of Estimates and Relative Standard Errors

Each estimated total for industry or geographic level j is of the following form:

$$Y'_j = \sum_{i \in R_j} \hat{W}_{ij} Y_{ij}$$

where R_j is the set of respondent establishments of level j, W_{ij} is the adjusted weight of respondent i in level j, and Y_{ij} is the value of the variable of interest for respondent i in level j.

The relative standard error for Y'_j is calculated as

$$V(Y'_j) = \sigma(Y'_j) / Y'_j$$

where

$$\sigma^2(Y'_j) = \sum_m \sigma^2(Y'_{mj})$$

and where the term on the left is the variance of the estimated total, and each term in the summation is

the variance contribution of the mth stratum to the overall variance, and where.

$$\sigma^2(Y'_{mj}) = \sum_{i \in n_m} \gamma_{mi} \left(\sum_{k=1}^i (\hat{W}_{mkj} Y_{mkj})^2 - \left(\sum_{k=1}^i \hat{W}_{mkj} Y_{mkj} \right)^2 \right).$$

The value n_m is the set of sample establishments (both reported and nonreported) in stratum m, and γ_{mi} is a sample-related variable for establishment i of stratum m that is a function of the establishment probability of selection and an associated joint probability. The other variables are defined as before. Since sampling was by NAICS-6, note that for NAICS-6 industry totals, each stratum component is zero except for the stratum corresponding to the NAICS-6 code of interest. For higher-level industry estimates and most geographic estimates, there may be many nonzero stratum components. Also, it is the case for geographic estimates that the establishments in a given stratum that have a different geographic code than the one being estimated are included in the above summations, but with Y-values set to zero. It should also be pointed out that the adjusted weight for nonrespondents is zero.
