a. Beginning in January 1978, the Bureau of Labor Statistics introduced a new price index for all urban consumers (CPI-U) for all items $(1982-1984=100)$ that forms a continuous series with the earlier index for urban wage earners and for clerical workers as of December 1977.

NOTES: . . . = not applicable.
Three technical changes in the definition of poverty are described in "Characteristics of the Population Below the Poverty Level, 1980," U.S. Census Bureau, Current Population Reports, Series P-60, No. 133: (1) Distinctions based on the sex of the family householder will no longer be made; (2) income thresholds for farm families will be the same as for nonfarm families of the same size and composition, and (3) the increased sample size will now permit separate poverty income criteria for families of 7,8 , and 9 or more persons. Separate criteria for these family sizes by number of children have been developed by the Social Security Administration for the base year 1978 on the same basis as the original poverty matrix for smaller family sizes, and then updated by means of the all-items consumer price index. The dollar thresholds for larger families beginning in 1980 are:
