#### critical point

The thermodynamic state in which liquid and gas phases of a substance coexist in equilibrium at the highest possible temperature. At higher temperature than the critical no liquid phase can exist.

GS thermodynamic properties
thermophysical properties
critical point

RT Mayer problem

critical pressure

DEF In rocketry, the pressure in the nozzle throat for which the isentropic weight flow rate is maximum. The pressure of a gas at the critical point, which is the highest pressure under which a liquid can exist in equilibrium with its vapor.

ĠS pressure

# critical pressure

thermodynamic properties thermophysical properties

# critical pressure

degenerate matter high pressure liquid phases supercritical pressures vapor phases

critical Reynolds number

USE Reynolds number

critical speed

USE critical velocity

critical stress

USE critical loading

### critical temperature

DEF The temperature above which a substance cannot exist in the liquid state regardless of the pressure. As applied to reactor overheat or afterheat, the temperature at which the least resistant component of the reactor core begins to melt down. As applied to materials, the temperature at which a change in phase takes place causing an appreciable change in the properties of the material.

GS temperature

## critical temperature

## declination

celestial equator; the arc of an hour circle between the celestial equator and a point on the celestial sphere, measured northward or southward from the celestial equator through 90 degrees, and labeled N or S to indicate the direction of measurement.

RT navigation

### decoders

Devices for translating electrical signals into predetermined functions. In computer operations, networks or devices in which one of two or more possible outputs results from a prescribed combination of inputs.

decoders GS Viterbi decoders BCH codes coders data converters decoding demodulators Reed-Solomon codes ∞ translators

## decoding

coding GS decoding BCH codes concatenated codes cryptography data compression decoders

## decompression sickness

DEF A disorder experienced by deep sea divers and aviators caused by reduced atmospheric pressure and evolved gas bubbles in the body, marked by pain in the extremities, pain in the chest (chokes), occasionally leading to severe central nervous system symptoms and neurocirculatory collapse. Used for bends (physiology).

### **Deep Impact Mission**

(added July 2005)

Flyby mission designed to observe the collision of a solid impactor with comet Tempel 1. The mission consists of a flyby spacecraft, which releases a guided impactor. The flyby spacecraft is equipped with two telescopes, the High Resolution Instrument, and the Medium Resolution Instrument, for imaging and spectroscopy of the collision and its effects.

lecular architecture resembling a spherical starburst, and a synthesis process that permits nearly complete control over critical molecular design parameters, such as size, shape, surface/interior chemistry, flexibility, and topology. Because of these characteristics, dendrimers are seen as important elements in the manufacture of nanoscale materials and devices.

## diffusion

DEF In an atmosphere, or in any gaseous system, the exchange of fluid parcels between regions, in apparently random motions of a scale too small to be treated by the equations of motion. In materials, the movement of atoms of one material into the crystal lattice of an adjoining material, e.g., penetration of the atoms in a ceramic coating into the lattice of the protected metal. In ion engines, the migration of neutral atoms through a porous structure incident to ionization at the emitting surface. Used for diffusion effect and perfusion.

## diffusion bonding

USE diffusion welding

## diffusion coefficient

DEF The absolute value of the ratio of the molecular flux per unit area to the concentration gradient of a gas diffusing through a gas or a porous medium where the molecular flux is evaluated across a surface perpendicular to the direction of the concentration gradient.

Earth Observing System (EOS)
DEF NASA's orbital multisensor observatory system for the long term acquisition of Earth sciences data to be operated in conjunction with an integrated ground-based science information system. This international system will become operational in 1995 when the first of four polar platforms will be launched. The first and third will be launched under U.S. auspices. The second under ESA auspices and the last under Japanese auspices.

electroforming

RT deposition electroluminescence

DEF Emission of light caused by an application of electric fields to solids or gases. In gas electroluminescence, light is emitted when the kinetic energy of electron or ions accelerated in an electric field is transferred to the atoms or molecules of the gas in which the discharge takes place. Used for electroluminescent lamps.

GS

The phenomenon wherein some dielectric materials experience an elastic strain when subjected to an electric field, this strain being independent of polarity of the field.

GS electrical properties . electrostriction

mechanical properties electrostriction

## environments

External conditions or the sum of such conditions, in which pieces of equipment, living organisms, or systems operate as in temperature environment, vibration environment, or space environment. Environments are usually specified by a range of values, and may be either natural or artificial.

exobiology

Field of biology that deals with the search for extraterrestrial life and the conditions that may give rise to life on other planets or elsewhere in the Universe. May also be defined to include the study of effects of extraterrestrial environments on living organisms. Used for astrobiology and space biology.

Akebono satellite GS artificial satellites . scientific satellites . . EXOS satellites .. EXOS-D satellite Japanese spacecraft **EXOS** satellites .. EXOS-D satellite

(added February 1992)

# exoskeletons

RT anatomy arthropods body composition (biology) bones connective tissue musculoskeletal system

exosolar planets

(added April 2001) USE extrasolar planets

#### exosphere

SN (ALTITUDES ABOVE APPROXIMATELY 500 KM)
The outermost, or topmost, portion of

the atmosphere. Its lower boundary is the critical level of escape, variously estimated at 500 to 1000 kilometers above the Earth's surface.

GS Earth atmosphere

. upper atmosphere

. . exosphere

RT Earth ionosphere Earth magnetosphere heterosphere planetary magnetotails radiation belts thermosphere

#### exothermic reactions

GS chemical reactions . exothermic reactions

association reactions combustion combustion chemistry combustion synthesis endothermic reactions incendiary ammunition pyrolysis thermal decomposition

#### expandable structures

#### GS expandable structures

DEF In general, the unwanted detection of input noise. In radar, an indication of a detected

target even though one does not exist, due to noise or interference levels exceeding the set threshold of detection. RT error signals signal to noise ratios warning systems

fan blades

DEF One or more revolving vanes attached to a rotary hub and operated by a motor.

compressor blades ducted fans ∞ fans propeller blades rotary wings turbine blades turbomachine blades

ducted fans fan blades propeller fans turbofans ventilation fans wind tunnel drives

fans (landforms)

Gently sloping, fan-shaped masses of detritus forming sections of very low shaped cones commonly at places where there is a notable decrease in gradient; specifically, alluvial fans. Also fan-shaped masses of congealed lava that formed on steep slopes by the continual changing direction of flow. Used for baja-

UF bajadas GS landforms . fans (landforms) alluvium canyons clays deltas gravels mud sands

sediments

DEF (1- antennas) Those regions of the field of an antenna where the angular field distribution is essentially independent of the distance from a specified point in the antenna region. (2-fiber optics) The regions, far from source, where the diffraction pattern is substantially the same as that at infinity. (mobile communication) The regions of the field of an antenna where the angular fild distance is essentially independent of the distance from the antenna. Used for Fraunhoffer region.

## frequency division multiple access

DEF A method of providing multiple access to communication satellites in which the transmissions from a particular Earth station occupy a particular assigned frequency band. In the satellite, the signals are simultaneously amplified and transposed to a different frequency band and retransmitted. The Earth station identifies its receiving channel according to its assigned frequency band in the satellite signal. Used for FDMA.

functionally gradient materials (added September 1992) DEF Composite materials that consist of a gradual compositional variation from ceramic to metal from one surface to the other. These continuous changes result in property gradients which can be adjusted by controlling the composition. Used for FGM (materials).
