# **Terms and Conditions of Use**

Purchase or receipt of this product indicates the customer's acceptance of the following terms and conditions:

- NASA does not grant exclusive use rights with respect to this product or the data contained therein.
- This product and the data contained therein are intended for the sole use of the customer. The data may not be installed on any system with public Internet access. The customer may not reproduce the data for distribution to any third party. Additional requests should be directed to the NASA Center for AeroSpace Information (help@sti.nasa.gov).
- The sale of this product shall not be construed to constitute the grant of exclusive rights in the data contained therein or any form of license to the customer under a NASA or Government patent, patent application, or invention.
- The customer will not assert any proprietary rights to any portion of the data, or attribute the data to any source other than NASA.
- With respect to data contained in this product, neither the U.S. Government, NASA, nor any of its employees or contractors make any representations or warranties, express, implied, or statutory, as to the validity, accuracy, completeness, or fitness for a particular purpose; nor assume any liability resulting from the use of such data and shall in no way be liable for any costs, expenses, claims, or demands arising out of the use of such data.

## NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NASA Aeronautics and Space Database and its public interface, the NASA Technical Report Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM.
   Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION.
   Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION.
   English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include creating custom thesauri, building customized databases, and organizing and publishing research results.

For more information about the NASA STI program, see the following:

- Access the NASA STI program home page at <a href="http://www.sti.nasa.gov">http://www.sti.nasa.gov</a>
- E-mail your question via the Internet to help@sti.nasa.gov
- Fax your question to the NASA STI Help Desk at (301) 621-0134
- Phone the NASA STI Help Desk at (301) 621-0390
- Write to: NASA STI Help Desk NASA Center for AeroSpace Information 7115 Standard Drive Hanover, MD 21076-1320

**Volume 2** • **Rotated Term Display** 

## Introduction

The NASA Thesaurus contains the authorized subject terms by which the documents in the NASA Aeronautics and Space Database are indexed and retrieved. The NASA Thesaurus comprises two volumes: Volume 1 – Hierarchical Listing With Definitions and Volume 2 – Rotated Term Display.

The *Hierarchical Listing With Definitions* contains all subject terms and USE cross references currently approved for use, and displays the full hierarchical structure for each term along with a definition when available. In addition, the listing has been developed to serve as an orthographic authority for upper/lowercase forms of all terms and cross references. The **term-added date**, displayed for all terms added after April 1988, is also given. The listing includes terms appearing in the *NASA Thesaurus*, *Preliminary Edition* (December 1967), the *NASA Thesaurus* (1982, 1985, 1988, 1994, and 1998 editions), and other terms approved for use through the end of December 2007. Over 18,300 terms, 4,300 definitions, and approximately 4,500 USE references are contained in the *Hierarchical Listing With Definitions*.

The *Rotated Term Display* is a ready-reference tool that provides thousands of additional 'access points' to the thesaurus terminology. It contains the postable terms and nonpostable terms found in the *Hierarchical Listing* arranged in a KWIC (key-word-in-context) index. It is a useful companion to the *Volume 1* listing, containing more than 52,700 entries.

New editions of the *NASA Thesaurus* CD-ROM are produced annually. Monthly updates are posted on the Thesaurus information page of the NASA scientific and technical information Web site at <a href="http://www.sti.nasa.gov/thesfrm1.htm">http://www.sti.nasa.gov/thesfrm1.htm</a>. Suggestions for term modification, deletion, and addition may be e-mailed to <a href="majernation-ma

Lexicographer NASA Center for AeroSpace Information 7115 Standard Drive Hanover, MD 21076-1320

The terminology of the earliest edition of the *NASA Thesaurus* was based in large part on the actual indexing vocabulary developed by NASA during the 1960s. Other thesauri, notably the DOD *Thesaurus of Engineering and Scientific Terms* (AD-672000), have provided additional candidate terms. The general guidelines for the initial creation of the *NASA Thesaurus* were based on the COSATI *Guidelines for the Development of Information Retrieval Thesauri* (1 September 1967). Continuing development of the *NASA Thesaurus* conforms to the thesaurus standard of the National Information Standards Organization (*Guidelines for the Construction, Format, and Management of Monolingual Controlled Vocabularies*, ANSI/NISO Z39.19-2005).

#### Nomenclature and Conventions

**Postable Terms**. Subject terms that have been approved for use in indexing, and thus can be 'posted.' In *Volume* 1, postable terms are shown in non-italic type.

**Nonpostable Terms**. Terms that are included for cross reference information and cannot be used for indexing. In *Volume* 1, nonpostable terms are set in italics.

**Term Selection**. Subject terms have been chosen on the basis of their significance and use in aerospace literature and their effectiveness in representing productive retrieval concepts. Particular consideration has been given to frequency of use in earlier NASA indexing and search vocabularies, to relationships with other terms in the vocabulary, and to precise scientific and technical usage.

**Noun Usage**. In general, subject terms are presented in the noun form.

**Singular vs. Plural**. The plural form has, in general, been used for subject terms. The singular form, however, is employed for non-count nouns (such as *snow*), terms that refer to unique entities such as *Mariner 10 Space Probe*, and terms related to specific processes, properties, and conditions.

**Term Length**. No more than 42 characters, including spaces, are used for any subject term. Various words in longer terms are sometimes truncated. Full expanded forms of such truncated terms are generally included in the scope notes.

**Term Ambiguity**. When subject terms have more than one meaning in aerospace usage, or where distinction between terms must be made, clarification is provided in one of two ways:

a) Parenthetical qualifying expressions or glosses are added, becoming part of the subject term. For example:

sizing (shaping)
sizing (surface treatment)

b) Scope notes are also added for explanation or definition; they do not become part of the subject term. For example:

## rotational states

SN (LIMITED TO MOLECULAR ENERGY LEVELS — EXCLUDES ROTATIONAL DYNAMICS OF VEHICLES OR OTHER BODIES)

**Word Order**. Subject terms that consist of more than one word are listed in *direct order*, i.e., in their natural word order rather than in an inverted form. (The *Rotated Term Display* can be used to access terms by embedded words.)

**Abbreviations and Acronyms**. Abbreviations and acronyms that are in common usage in the aerospace and general engineering communities are employed for some postable terms in this thesaurus. In most cases, USE cross references are made from the unabbreviated forms. For example:

Orbiting Solar Observatory USE **OSO** 

**Synonyms**. When candidate subject terms are true synonyms, one is chosen to be the valid, or postable term, and the other is provided with a USE cross reference. For example:

Columbium **niobium** 

USE **niobium** UF columbium

**Array Terms**. Subject terms with meanings either too broad or ambiguous for effective indexing or retrieval of information, have been designated array terms and carry the following scope note (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE TERMS LISTED BELOW). Relationships with other postable terms are shown by the Related Term (RT) reference only. For example:

 $\infty$  beams

SN (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE

TERMS LISTED BELOW)

RT beams (radiation) beams (supports)

An infinity symbol  $(\infty)$  precedes an array term in each of its appearances in *Volume 1*.

**Identifiers**. In the *NASA Thesaurus*, identifiers (i.e., terms that designate unique entities) are treated as regular terms and are provided complete cross references. Most identifiers are proper nouns and many include a numeric or alphabetic designation for a particular model or item. As a general rule, identifiers are added to the thesaurus only if they have an important relation to the aerospace sciences.

## Cross Reference Structure

Cross reference relationships in the *Hierarchical Listing With Definitions* are shown as follows:

| <b>Cross References</b> | Notation |
|-------------------------|----------|
| Broader Term            | GS       |
| Narrower Term           | GS       |
| Related Term            | RT       |
| Use                     | USE      |
| Used For                | UF       |

These cross references have the following applications:

**Broader Term**. This reference indicates that the term represents a more inclusive concept. In the Generic Structure (GS), the broader terms appear above and to the left of the term referenced. For example:

## reentry communication

GS telecommunication

- . space communication
- . . spacecraft communication
- ... reentry communication

The terms *telecommunication*, *space communication*, and *spacecraft communication* are broader terms to *reentry communication*.

**Narrower Term**. This reference indicates that the term represents a more specific concept. In the Generic Structure (GS), the narrower terms appear below and to the right (indented) of the term referenced. For example:

#### **GS** scanners

- . Coastal Zone Color Scanner
- . horizon scanners
- . infrared scanners
- . ocean color scanner
- . optical scanners
- . . flying spot scanners
- . . multispectral band scanners
- ... Thematic Mappers (Landsat)
- . ultrasonic scanners

The terms Coastal Zone Color Scanner, horizon scanners, infrared scanners, ocean color scanners, optical scanners, and ultrasonic scanners are narrower terms to scanners. The terms flying spot scanners, multispectral band scanners, and Thematic Mappers (Landsat) are narrower to both optical scanners and scanners.

The number of narrower terms is not limited. For example, *artificial satellites* has nearly 500 narrower terms.

**Related Terms (RT)**. This reference indicates that the two terms are conceptually associated, but not equivalent or generically related. The RT relationship is reciprocal, as illustrated in the following example:

## radar equipment

## radio equipment

RT radio equipment

RT radar equipment

**Use (USE)**. This reference indicates that the listed term is not 'postable,' i.e., not a valid term, and that the term or terms adjacent to the USE indicator should be used instead. Note that all nonpostable terms are set in italics. For example:

jet airstreams

**USE** jet streams (meteorology)

**Used For (UF)**. This relation is the reciprocal of the USE cross reference and indicates that the term listed above the UF indicator is a valid or 'postable' term, and term or terms adjacent to the UF indicator are nonpostable. For example:

## jet streams (meteorology)

UF jet airstreams

## Filing Order

The ordering of subject terms into an alphabetical arrangement can be accomplished in several ways. The most commonly used methods are the letter-by-letter, word-by-word, and the computer sorting order. In the absence of any universal agreement on a standardized approach, a word-oriented modification of the computer sorting technique has been adopted in this thesaurus.

A special feature has been added to this technique to sort numeric designations in natural ascending order. Non-alphanumeric characters contained within terms are sorted prior to alphanumeric characters. In *Volume 2*, non-alphanumerics are ignored altogether for the general KWIC sort. Thus, embedded parentheses are filed before the alphabet in *Volume 1*, but are ignored for filing in *Volume 2*. Hyphens, slashes and periods follow blank spaces.

## Retrospective Indexing

Between 1984 and 1993, all terms added to the *NASA Thesaurus* were retrospectively assigned to past database records using a method that combined advanced search strategies and manual review. Most of the terms for which this procedure was carried out can be identified by checking the **term-added date** that appears directly below the term in *Volume 1*. Term-added dates are provided for all terms added to the *NASA Thesaurus* after April 1988.

## Thesaurus Term Definitions

Definitions are given for most terms added since 1976 as well as for many earlier terms. Definitions of more common or general scientific terms are given a NASA slant if one exists. Certain x terms are not defined as a matter of policy: common place names, chemical elements, specific models of computers, and non-technical terms. Other terms lack definitions because the *NASA Thesaurus* predates by a number of years the systematic effort to define terms. Nevertheless, definitions of older terms are continually being added.

Many of the definitions contained in the *Thesaurus* were constructed by lexicographers at the NASA Center for AeroSpace Information, who rely on the following sources for their information: experts in the field, literature searches from the NASA STI databases, and specialized references. Other definitions were obtained from the following sources:

AGI. Glossary of Geology, 3rd edition. Alexandria, VA, American Geological Institute, 1987.

**ASTM**. Compilation of ASTM Standard Definitions, 6th edition. Philadelphia, PA, ASTM, 1986. Copyright, the American Society for Testing and Materials (ASTM). All rights reserved. Used with the permission of ASTM. The original definitions appeared in the Annual Book of ASTM Standards.

**DOE**. Energy Data Base Subject Thesaurus (DOE/TIC-7000-R7). Oak Ridge, TN, Department of Energy, 1987.

**IEEE**. *Standard Dictionary of Electrical and Electronics Terms*, Fourth ed., New York, NY, IEEE, 1988.

**SP-7**. Dictionary of Technical Terms for Aerospace Use, NASA SP-7. Washington, DC, NASA, 1965.

In some cases, definitions from these sources have been subjected to minor editorial alterations; for example, to make a definition agree in number with the NASA form of the term.

stability acoustic instability

signal fading thermoacoustic effects

#### acoustic levitation

DEF Method by which molten materials in space are suspended during processing experiments in the low gravity environment. Also, the use of very intense sound waves to keep a body suspended, thereby eliminating any container contact.

GS levitation

acoustic levitation

RT buoyancy space processing

#### acoustic measurement

(MEASUREMENT OF PROPERTIES, QUANTITIES OR CONDITIONS ASSOCIATED WITH ELASTIC WAVES) DEF Measurement of properties, quantities, or conditions of acoustical, i.e., mechanical waves. Used for sound measurement.

sound measurement

#### GS acoustic measurement

. noise measurement acoustic emission

acoustic frequencies acoustic imaging

ambience

anechoic chambers

audio frequencies audiometry cepstral analysis

effective perceived noise levels

frequency measurement grazing flow

measurement

mechanical measurement

noise meters

reverberation chambers

seismographs sound pressure sound waves

ultrasonic tests

#### acoustic microscopes

DEF Instruments which use acoustic radiation at microwave frequencies to allow visualiza-tion of microscopic detail exhibited in elastic properties of objects. Used for scanning laser acoustic microscope (SLAM).

scanning laser acoustic microscope (SLAM) UF

GS microscopes

. acoustic microscopes

acoustic propagation imaging techniques microwave frequencies optical equipment photoacoustic microscopy wave propagation

#### acoustic nozzles

RT ∞ nozzles sonic nozzles sound generators

#### acoustic propagation

GS transmission

. wave propagation

acoustic propagation

. . sound propagation RT acoustic microscopes

elastic waves flight simulation reverberation chambers

#### acoustic sounding

GS sounding

acoustic sounding

acoustic scattering

acoustics Earth atmosphere meteorology rocket sounding rocket vehicles sounding rockets ultrasonic tests underground acoustics upper atmosphere

acoustic stability

USE frequency stability

#### acoustic streaming

DEF Unidirectional flow currents in a fluid that are due to the presence of sound waves.

fluid flow

fluid switching elements fragmentation sound waves

streamlining

#### acoustic velocity

The speed of propagation of sound waves. Used for sonic speed, sound barrier, and sound velocity.

UF sonic speed sound barrier sound velocity acoustic properties

acoustic velocity rates (per time) . acoustic velocity

velocity acoustic velocity

RT ∞ barriers

exhaust velocity Gutenberg zone Mach cones Mach number sonic booms sound pressure subsonic speed supersonic speed transonic speed

acoustic vibrations USE sound waves

#### acoustical holography

sonoholography sound holography

GS imagery . photography

. . holography

atoll reefs USE

coral reefs

## atolls

Coral reefs appearing in plan view as roughly circular (though sometimes elliptical or roughly circular (though sometimes elliptical or horseshoe-shaped), and surmounted by a chain or ring of closely spaced low coral inlets that encircle a shallow lagoon in which there is no pre-existing land or islands of non-coral origin; the reefs are surrounded by deep water of the open sea, either oceanic or continental shelves. Atolls range in diameter from 1 km to more than 130 km, and are especially common today in the western and central Pacific Ocean. Atoll is derived from the native name in the Maldive Islands (Indian Ocean) which are typical exlands (Indian Ocean) which are typical examples of this structure.

baroreceptor reflexes (added April 2001) USE baroreflexes

## baroreceptors

DEF Receptors in the vascular system, particularly the aorta and carotid sinus, which are sensitive to stretch of the vessel walls.

pressoreceptors

anatomy

- . sense organs
- . . baroreceptors

receptors (physiology)

baroreceptors

baroreflexes pressure

baroreflexes (added March 2001)

DEF A negative feedback system that buffers short-term changes in blood pressure. Increased pressure stretches blood vessels, which activates pressoreceptors (baroreceptors) in the vessel walls. The central nervous system's net response is a reduction of central sympathetic outflow. This reduces blood pressure by decreasing peripheral vascular resistance and by lowering cardiac output. Because the baroreceptors are tonically active, the baroreflex can compensate rapidly for both increases and decreases in blood pressure.

radiobiology **IMBLMS** 

biomarkers

(added March 2002)

Any measurable feature from which one can infer a particular environment-induced change in a biological system, detect the presence of a disease, or infer the presence of life in a particular environment.

UF biological markers clinical markers bioassay biochemistry biogeny biogeochemistry biometrics chemical indicators diagnosis environmental monitoring exobiology extraterrestrial life life detectors ∞ markers

DEF The dry weight of living matter in a given area expressed in terms of mass or weight per unit of volume or area.

GS weight (mass)
. biomass animals RT ∞ biology carbon cycle ∞ density organisms plants (botany) populations silviculture ∞ weight

signatures

toxicology

### biomass burning

(added December 1999)
DEF Burning of vegetation in forests, grasslands, and agricultural lands usually carried out to clear the land and change its use; a significant contributor to the global budgets of many radiatively and chemically active gases and particulates in the atmosphere.

GS combustion

biomass burning

air pollution climate change combustion products contaminants deforestation environment pollution man environment interactions smoke

#### birefringence

DEF A double-refraction phenomenon in which an unpolarized beam of light is divided into two beams with different directions and relative velocities of propagation. The amount of energy transmitted along an optical path through a crystal which exhibits birefringence and is a function of crystalline orientation. Used for Pockels effect.

#### boundary value problems

DEF Physical problems completely specified by a differential equation in an unknown, valid in a certain region of space, and certain information (boundary condition) about the un-known, given on the boundaries of that region. Known, given on the boundaries of that region. The information required to determine the solution depends completely and uniquely on the particular problem. Used for initial value problems and point matching method (mathematics).

#### combustion

DEF A chemical process of oxidation that occurs at a rate fast enough to produce heat and usually light either as a glow or flames. Some oxidation such as that of hydrogen emits radiation outside the visible spectrum. Used for burning and burning process.

UF burning
