#### Rayleigh waves

Two dimensional barotropic distur-DEF

bances in a fluid having one or more discontinuities in the vorticity profile. Surface waves associated with the free boundary of a solid, such that a surface particle describes an ellipse whose major axis is normal to the surface and whose center is at the undisturbed surface. At maximum particle displacement away from the solid surface the motion of the particle is opposite to that of the wave.

refracted radiation

USE refracted waves

refracted rays

USE refracted waves

### refracted waves

Waves that have had their direction of motion changed by refraction. Used for refracted radiation and refracted rays.

refracted radiation refracted rays

corpuscular radiation eikonal equation

elastic waves

electromagnetic radiation

incident radiation photon beams reflected waves

refraction ∞ waves

#### refracting telescopes

Telescopes which collect light by means of a lens or system of lenses.

telescopes

refracting telescopes

lenses

optical equipment

optical measuring instruments spectroscopic telescopes

stratoscope telescopes

#### refraction

The process in which the direction of energy propagation is changed as the result of a change within the propagating medium, or as the energy passes through the interface representing a density discontinuity between the two media. In the first instance, the rays undergo a smooth bending over a finite distance. In the second case, the index of refraction changes through an interfacial layer that is thin compared to the wavelength of the radiation; thus, the refraction is abrupt, essentially discontinuous.

#### remote sensing

DEF The collection of information about an object or phenomena by a recording device that is not in physical contact with it. The term is usually restricted to mean the methods for, and activity of, recording features and phenomena of the Earth surface from a remote platform or vehicle. Typically the methods used record reflected or radiated electromagnetic energy, such as radiometry, photometry, spectrometry, and photographic and radar techniques.

In radar, the minimum angular separation at the antenna at which two targets can be distinguished (a function of beamwidth); or the minimum range at which two targets at the same azimuth can be separated (equal to one half the pulse height). Of a gyro, a measure of response to small changes in input; the maximum value of the minimum input change that will cause a detectable change in the output for inputs greater than the threshold, expressed as a percent of one half the input range. Used for resolving power. resolving power UF resolution GS . angular resolution high resolution

retrofitting

DEF Modification of equipment to incorporate changes made in later production of similar equipment; the changes may be performed in the factory or in the field.

retrofitting GS

acoustic retrofitting

installing

#### retrograde orbits

(added June 1995)

Motion in an orbit opposite to the usual orbital direction of celestial bodies within a given system. Specifically, of a satellite, motion in a direction opposite to the direction of rotation of the primary.

GS orbits

retrograde orbits

RT interacting galaxies orbital mechanics planetary orbits precession satellite orbits spacecraft orbits stellar orbits three body problem

#### retroreflection

DEF Reflection wherein the reflected rays return along paths parallel to those of their corresponding incident rays. Also called retroflection.

GS reflection

retroreflection

RT antenna arrays incident radiation LAGEOS (satellite) laser ranging lunar retroreflectors reflected waves retroreflectors satellite laser ranging

#### retroreflectors

DEF Class of optical instruments which cause reflected radiation to return along paths parallel to those of their corresponding incident rays

GS radar equipment

retroreflectors reflectors

retroreflectors

laser ranging radar corner reflectors retroreflection satellite laser ranging

### retrorocket engines

Rocket engines fitted on or in spacecraft, satellites, or the like to produce thrust opposed to forward motion.

GS engines

. rocket engines
. retrorocket engines

. . BE-3 engine RT control rockets

internal combustion engines

liquid propellant rocket engines man operated propulsion systems restartable rocket engines

retrofiring

retrothrust

solid propellant rocket engines

Thrust used for a braking maneuver; reverse thrust. Used for retroaction.

### rocket propellants

Agents used for consumption or combustion in rockets and from which the rockets derive their thrust, such as fuels, oxidizers, additives, catalysts or any compounds or mixtures of these. Used for multipropellants.

multipropellants

GS propellants

#### rocket propellants

- . . gaseous rocket propellants
- . . liquid rocket propellants
- . . . cryogenic rocket propellants
- gelled rocket propellants

RT ∞ interceptors pursuit tracking

satellite laser ranging

(added July 2001)

A technique for determining the dis-

tance to or from an artificial satellite by precise measurement of the time required for a laser pulse to travel from a transmitter to a retroreflector and return to a detector.

scattering cross sections

The hypothetical areas normal to the

incident radiation that would geometrically inter-

Schach effect

When a slowly or nonrotating satellite

is heated on its sunward side, the photons of

diffraction diffuse a portion of the incident radia-

tion in all directions. In scattering, no energy

thermal radiation carry away more momentum from the hot sunward side than the cold shadowed side, thereby giving the satellite a certain net acceleration in the direction away from the sun. This effect was discovered by Milton Schach in the course of an investigation of unknown perturbations in the LAGEOS satellite.

#### shock tubes

Relatively long tubes or pipes in which very brief high speed gas flows are produced by the sudden release of gas at very high pressure into low pressure portions of the tubes; the high speed flows move into the region of low pressure behind shock waves.

#### shock waves

DEF Surfaces or sheets of discontinuity (i.e., abrupt changes in conditions) set up in supersonic fields of flow, through which the fluids undergo a finite decrease in velocity accessoried by a marked increase in pressure. companied by a marked increase in pressure, density, temperature, and entropy, as occurs, e.g., in supersonic flows about bodies. Used for bow shock waves.

#### soft gamma repeaters

(added January 2000)

DEF A class of x-ray source which emits repeating bright bursts of "soft" or low-energy gamma rays, along with steady x-ray pulsations. By the end of 1999 only a handful of these sources had been identified in our galaxy and in the Large Magellanic Cloud. Since they are associated with supernova remnants, these sources are probably some kind of young neutron star. One theory holds that these stars are young magnetars (magnetically-powered neutron stars). Bright bursts occur when the evolving, ultra-strong magnetic field stresses the neutron star's solid crust to breaking, in a sudden starquake. X-ray pulsations are due to the rotation of the star, with it's hot surface bright in x-rays. UF

solid propellant rocket engines

Rocket engines fueled with solid propellants. Such motors consist essentially of a combustion chamber containing the propellant, and a nozzle for the exhaust jet, although they often contain other components, such as grids or liners.

## solid propellants

DEF Specifically, a rocket propellant in the solid form, usually containing both fuel and oxidizer combined or mixed, and formed into a monolithic (not powdered or granulated) grain.

## spherical coordinates

DEF A system of curvilinear coordinates in which the position of a point in space is designated by its distance from the origin or pole (the radius vector), the angle phi between the radius vector and a vertically directed polar axis (the cone angle or coaltitude) and the angle theta between the plane of the phi and a fixed meridian plane through the polar axis (the polar angle or longitude). Used for curvilinear coordinates.

#### superpressure balloons

DEF Meteorological balloons consisting of nonextensible envelopes designed to withstand higher internal pressure differentials than external ones. Such balloons will maintain constant elevations until sufficient gas diffuses from them to cause a change in buoyancy. Used for constant volume balloons and tetroons.

### superrotation

The generally more rapid relative motions found in the very tenuous regions of the atmosphere at heights around 300 km. The density of the atmosphere decreases rapidly with height and more than 95 percent of the mass of the atmosphere is contained within the troposphere and lower stratosphere. These regions of the atmosphere rotate faster on average than the underlying solid Earth.
