#### Mercator projection

DEF An equatorial, cylindrical, conformal map projection derived by mathematical analysis (not geometrically) in which the equator is represented by a straight line true to scale. The meridians are represented by parallel straight lines perpendicular to the equator and equally spaced according to their distance apart at the equator. The parallels are represented by straight lines perpendicular to the meridians and parallel with (and the same length as) the equator. The parallels are spaced so as to achieve conformality, their spacing increasing rapidly with their distance from the equator so that at all places the degrees of latitude and longitude have the same ratio to each other as to the sphere itself. This results in greater distortion of distances, areas, and shapes in the polar regions (above 80 deg. latitude). The scale is increasingly poleward as the secant of the latitude. Because any line of constant direction (azimuth) on the sphere is truly represented on the projection by a straight line, the Mercator projection is of great value in navigation. It is used for hydrographic charts, and also to show geographic variations of some physical property (such as magnetic declination) or to plot trajectories of Earth satellites in oblique orbits. It is named after Gerhardus Mercator (1512-1594), a Flemish mathematician and geographer, whose world map of 1569 used this projection.

### MESSENGER (spacecraft)

(added October 2004)

DEF Spacecraft and related mission designed to study the structure, geochemistry, and magnetic fields of the planet Mercury. The science payload consists of the Mercury Dual Imaging System (MDIS), the Gamma-Ray and Neutron Spectrometer, the Mercury Laser Altimeter, the Mercury Atmospheric and Surface Composition Spectrometer, the Energetic Particle and Plasma Spectrometer, and a magnetometer, radio science instrument, and x-ray spectrometer. MESSENGER (MErcury Surface, Space ENvironment, Geochemistry, and Ranging) was launched August 2004.

#### **MODFETS**

Heterojunction field effect transistor device structures in which only the larger (Al, Ga)As bandgap is doped with donors while the GaAS layer is left undoped. This results in high electron mobilities due to spatially separated electrons and donors. Used for modulation doped FETs.

#### modulation

DEF The variation in the value of some parameter characterizing a periodic oscillation. Specifically, variation of some characteristic of a radio wave, called the carrier wave, in accordance with instantaneous values of another wave, called the modulating wave. Used for carrier modulation.

#### modulation doping

DEF The process of doping only the larger bandgap of a heterojunction device with donors, while the other layer is left undoped. Since the electrons and donors are spatially separated, ionized impurity scattering is avoided and extremely high electron mobilities are obtained.

EROS asteroid near Earth objects rendezvous trajectories Rosetta mission

#### near Earth objects

(added November 2001)

Asteroids, meteoroids, or short-period comets having trajectories that intersect the orbit of Earth or that are within 0. 3 Astronomical Units (AU) of Earth. Asteroids and comets with perihelion distance less than 1. 3 AU.

(added October 2000)

(added October 2000)

DEF One of the two mechanisms by which cell death occurs (the other being the physiological process of APOPTOSIS). A pathological process caused by the progressive degradative action of enzymes that is generally associated with severe cellular trauma. It is characterized by mitochondrial swelling, nuclear flocculation, uncontrolled cell lysis, and ultimately cell death. In general, cell or tissue death caused by disease or injury.

## negative ions

lons singly or in groups which acquire negative charges by gaining one or more electrons.

GS

#### . negative ions

. anions free radicals ionic mobility nitrogen ions oxygen ions plasma physics

# negative matter

(added August 1991)

(NOT ANTIMATTER)
A hypothetical form of matter whose active-gravitational, passive-gravitational, inertial, and rest mass are opposite in sign to normal, positive matter. Negative matter is not antimatter.

GS matter (physics)

. negative matter antimatter

#### Nozomi Mars Orbiter

(added August 1998)

A Japanese Mars mission spacecraft designed to study the Martian upper atmosphere and its interaction with the solar wind, and to develop technologies for use in future planetary missions. Specifically, instruments on the spacecraft enable the measurement of the structure, composition and dynamics of the ionosphere; aeronomy effects of the solar wind; the escape of atmospheric constituents; the intrinsic magnetic field; and dust in the upper

atmosphere and in-orbit around Mars.

#### Nusselt number

DEF A number expressing the ratio of convective to conductive heat transfer between a solid boundary and a moving fluid, defined as hl/k where h is the heat transfer coefficient, I is the characteristic length, and k is the thermal conductivity of the fluid. (Named after Wilhelm Nusselt, German engineer.)

#### nutation

The oscillation of the axis of any rotating body, as a gyroscope rotor. Specifically, in astronomy, irregularities in the precessional motion of the equinoxes because of varying positions of the moon and, to a lesser extent, of other celestial bodies with respect to the ecliptic. Used for nutational oscillation.

ozonosphere
DEF The general stratum of the upper atmosphere in which there is an appreciable ozone concentration and in which ozone plays an important part in the radiation balance of the atmosphere. This region lies roughly between 10 and 50 kilometers, with maximum ozone concentration at about 20 to 25 kilometers. Used for ozone layer.

payload stations

SN (THE POSITION OR MOUNTING PLACE FOR A PAYLOAD ONBOARD A ROCKET VEHICLE, SPACECRAFT, OR SPACE STATION: EXCLUDES ORBITAL STATIONS AND CREW WORKSTATIONS)

DEF The locations in the Space Shuttles' flight decks and cargo bay at which payloads are

mounted.

stations GS

payload stations payloads space transportation

payload transfer

DEF The in-space movement of payloads from point to point.

orbital servicing payload retrieval (STS) space maintenance

DEF Originally, the revenue producing portions of an aircraft's load, e.g., passengers, cargo, and mail. By extension, that which an aircraft, rocket, or spacecraft carries over and above which is necessary for the operation of the vehicle for its flight.

#### Phobos spacecraft

(added August 1998)

Two Soviet spacecraft (Phobos 1 and 2, both launched in July 1988) designed to study the plasma environment in the Martian vicinity, the surface and atmosphere of Mars, and the surface composition of the Martian satellite Phobos. Other mission objectives included the study of the interplanetary environment and solar observations.

# **Phoenix Mars Lander**

(added December 2007)

DEF A robotic spacecraft launched under the Mars Scout Program to land in the planet's water-ice-rich northern polar region. Instruments aboard the lander were developed to search for environments suitable for microbial life on Mars and research the history of water there. The lander mission was headed by the Lunar and Planetary Laboratory at the University of Arizona and was the first scientist led mission to Mars.

## photoacoustic spectroscopy

DEF An optical technique for investigating solid and semisolid materials, in which the sample is placed in a closed chamber filled with a gas and illuminated with monochromatic radiation of any desired wavelength, and with intensity modulated at some acoustic frequency. Absorption of radiation results in a periodic heat flow from the sample, which generates sound detectable with a sensitive microphone.

# photoconductive cells

DEF Photoelectric cells whose electrical resistance varies with the amount of illumination falling upon the sensitive area of the cell.

photoelectric cells

photoconductive cells

RT ∞ cells

photovoltaic cells

# photoconductivity

DEF The conductivity increase exhibited by some nonmetallic materials, resulting from the free carriers generated when photon energy is absorbed in electronic transitions. The rate at which free carriers are generated, the mobility of the carriers, and the length of time they persist in conducting states (their lifetime) are some of the factors that determine the amount of conductivity change. Used for photoresistivity.

Pioneer Venus 2 sounder probe Pioneer Venus 2 spacecraft DEF This multiprobe spacecraft, launched on its Venus mission in August 1978, comprises a Transporter Bus, a sounder probe, and three identical probes (North, night, and day) which separately investigated and photographed the atmosphere, clouds and related phenomena. The multiprobe spacecraft traveled about 354 million kilometers. It entered Venus atmosphere on December 9, 1978 and all probes transmitted data. Used for Pioneer Venus 2 Multiprobe spacecraft. # planetary waves

Waves on uniform currents in twodimensional nondivergent fluid systems rotating with varying angular speeds about the local vertical (beta plane). These waves represent a special case of barotropic disturbance, conserving absolute vorticity. As applied to atmospheric flow, the planetary waves takes into account the variability of the Coriolis parameter while assuming the motion to be two-dimensional. Used for UF long waves (meteorology) and Rossby waves.

#### planetology

RT Jupiter rings planetary geology planetary meteorology planetary rotation planetary structure Saturn rings terrestrial planets trans-Neptunian objects

DEF Celestial bodies of the solar system, revolving around the sun in nearly circular orbits, or similar bodies revolving around stars. The larger of such bodies are sometimes called principal planets to distinguish them from asteroids, planetoids, or minor planets, which are comparatively small. The larger planets are accompanied by satellites such as the moon. Inferior planets have orbits smaller than that of the Earth; superior planets have orbits larger than that of the Earth. The four planets nearest the sun are called inner planets; the others, outer planets. The four largest planets are called major planets. The four planets commonly used for celestial observations are called navigational planets. The word planet is of Greek origin, meaning, literally, wanderer, applied because the planets appear to move relative to the stars.

(EXCLUDES MAGNETOHYDRODYNAMIC OR THERMONUCLEAR GENERATORS OF ELECTRIC POWER)

Machines, such as electric arc chambers, that will generate very high heat fluxes to convert neutral gases into plasmas. Devices which use the interaction of plasmas and electrical field to generate currents. Used for plasma generation.

plasma interaction experiment
DEF A NASA Lewis experiment, the first of which was launched piggyback with Landsat 3 in 1978 to study the charged particle space plasma environment and its effect on spacecraft sur-faces operating at high voltages. The experi-ment lasted several hours as planned. The second was launched piggyback with Iras in 1983. Used for PIX. UF PIX

#### polar wandering (geology)

DEF Migration during geologic time of the Earth's poles of rotation and magnetic poles. Also known as polar migration. Used for Chandler motion.

Chandler motion RT Chandler wobble Earth axis ∞ Earth motion Earth orientation geodesy nutation periodic variations precession

#### Polar/GGS spacecraft

(added January 2001)

One of two NASA spacecraft in the Global Geospace Science (GGS) initiative and part of the International Solar Terrestrial Physics (ISTP) program. Polar (Polar Plasma Laboratory) measures solar wind entry, ionospheric output, and the depositions of energy into the neutral atmosphere at high latitudes. Imaging instruments make possible the measurement of visible, ultraviolet, and X-ray spectra of the polar caps. The spacecraft was launched in February 1996.

DEF The sign of the electric discharge associated with a given object, as an electrode or an ion.

RT ∞ dipoles electric charge electric fields

magnetic fields magnetic poles polarization (charge separation) polarization (spin alignment) quadrupoles

#### ∞ polarization

(USE OF A MORE SPECIFIC TERM IS RECOMMENDED.-CONSULT THE TERMS LISTED BELOW)
The state of electromagnetic radiation SN

when transverse vibrations take place in some regular manner, e.g., all in one plane, in a circle, in an ellipse, or in some other definite curve. With respect to particles in an electric field, the displacement of the charge centers within a particle in response to the electric force acting thereon. The response of the molecules of a paramagnetic medium (such as iron) when subjected to a magnetic field.

#### power factor controllers

A solid state electronic device that reduces excess energy waste in AC induction motors by providing only the amount of voltage required to satisfy a given load.

ĠS controllers

# . power factor controllers

current regulators electric motors energy conservation energy conversion efficiency induction motors power efficiency voltage regulators

The ratio of the power that a transducer delivers to a specified load, under specified operating conditions, to the power absorbed by its input circuit. Of an antenna, in a given direction, 4 pi times the ratio of the radiation intensity in that direction to the total power delivered to the antenna.

gas is placed in the single optical path of the radiometer and subjected to cyclical pressure changes which alter the absorption lines in the infrared spectrum of the gas. A narrow band signal results from the different voltages at the detector at high and low cell pressures. A wideband signal is generated by physically chopping a percentage of the input beam with a rotating

(added March 2001)

DEF Luminescent paints used for the nonintrusive optical measurement of static and transient pressure fields. These paints are typically organic luminophores or dyes dispersed in an oxygen permeable polymeric binder. The luminescence is induced by the excitation of the dye with an appropriate wavelength light. The emitted intensity or brightness of the paint is inversely proportional to the partial pressure of oxygen because the luminescence is quenched by oxygen.

# propellants

Any agents used for consumption or combustion in rockets and from which the rockets derive their thrust, such as fuels, oxidizers, additives, catalysts, or any compounds or mixture of these; specifically, fuels, oxidants, or a combination or mixture of fuels and oxidants used in propelling rockets. Propellants are commonly in either liquid or solid form.

pulse repetition rate pulsed radiation

Hartmann-Sprenger tubes

. pulse heating search radar reached, at which point an arc discharge iniheat treatment surveillance radar tiates in the capillary between the electrodes. . annealing synchronizers pulsed arcjet engines . pulse heating tracking radar engines . rocket engines heating . transient heating pulse rate . . electric rocket engines (FOR CARDIOVASCULAR PULSE, USE HEART RATE) . pulse heating SN ... electrothermal engines laser heating . . . . arc jet engines UF chronotrons simulated annealing .... pulsed jet engines GS rates (per time) plasma engines pulse rate pulse height resistojet engines . pulse repetition rate USE pulse amplitude RT electric pulses pulsed laser deposition picosecond pulses pulse modulation (added December 1992) pulsed radiation Modulation of a carrier by a pulse train. GS deposition Modulation of one or more characteristics of a . laser deposition pulse recorders pulse carrier. ... pulsed laser deposition USE counters GS coding utilization . signal encoding . laser applications pulse repetition rate . . pulse modulation . . laser deposition rates (per time) ... pulse amplitude modulation . . pulsed laser deposition . pulse rate ... pulse code modulation crystal growth . pulse repetition rate . . . . delta modulation epitaxy frequency response . . . . differential pulse code excimer lasers optical pumping modulation laser heating pulse duration ... pulse frequency modulation pulsed lasers pulse generators ... pulse time modulation superconducting films pulsed lasers . pulse duration modulation vapor deposition .... pulse position modulation pulse time modulation modulation pulsed lasers DEF Modulation in which the values of in-. pulse modulation GS stimulated emission devices stantaneous samples of the modulating wave pulse amplitude modulation are caused to modulate the time of occurrence . . pulse code modulation . . pulsed lasers of some characteristic of a pulse carrier. Used . . . delta modulation . . . Q switched lasers for PTM (modulation). . . . ultrashort pulsed lasers . . . differential pulse code modulation PTM (modulation) . . pulse frequency modulation ... ultraviolet lasers GS coding . . pulse time modulation argon lasers . signal encoding carbon dioxide lasers . . . pulse duration modulation . . pulse modulation . . pulse position modulation gas lasers . . . pulse time modulation RT amplitude modulation glass lasers . . . . pulse duration modulation demodulation inertial fusion (reactor) pulse position modulation laser heating laser target interactions demodulators modulation electric pulses . pulse modulation electromagnetic missiles laser welding . . pulse time modulation nitrogen lasers electromagnetic pulses . . . pulse duration modulation frequency modulation light modulation pulse repetition rate . . . pulse position modulation pulsed laser deposition modems pulse width ruby lasers semiconductor lasers modulators USE pulse duration phase modulation TEA lasers pulse frequency modulation telemetry pulse width amplitude converters tube lasers pulsed radiation waveguide lasers  $RT\, \infty \, converters$ radio telemetry frequency converters pulsed plasma thrusters time division multiplexing (added April 2001) trigatrons pulse width modulation DEF Electromagnetic propulsion devices in USE pulse duration modulation which electrical power is used to ablate, ionize, and electromagnetically accelerate atoms and pulse position modulation A form of pulse time modulation in pulsed arcjet engines which the position in time of a pulse is varied. (added March 2001) molecules from a block of solid propellant mate-Also called pulse phase modulation. Used for USE pulsed jet engines UF PPT (rocket engines) PPM (modulation). PPM (modulation) pulsed inductive thrusters engines GS coding (added April 2001) . rocket engines . signal encoding DEF Electromagnetic propulsion devices . . electric rocket engines . . pulse modulation that accelerate a plasma propellant by the JxB . . . plasma engines ... pulse time modulation Lorentz force, and in which the driving current in ... pulsed plasma thrusters . pulse position modulation the plasma is induced, rather than being introelectromagnetic propulsion modulation duced through electrodes. plasma propulsion . pulse modulation PIT (rocket engines) spacecraft propulsion . . pulse time modulation engines ∞ thrustors . pulse position modulation . rocket engines pulsed radiation modems . . electric rocket engines GS pulsed radiation . . . plasma engines . . . pulsed inductive thrusters . electromagnetic pulses DEF A type of radar, designed to facilitate . . system generated electromagnetic electromagnetic propulsion range measurement, in which the transmitted plasma propulsion pulses energy is emitted in periodic short pulses. spacecraft propulsion continuous radiation GS radar corpuscular radiation ∞ thrustors . pulse radar elastic waves electromagnetic radiation . . pulse Doppler radar pulsed jet engines . . . monopulse radar DEF Arcjet engines that produce thrust by gamma ray lasers ejecting a pulsed, high velocity plasma out of a . . Shuttle Imaging Radar laser damage conventional supersonic nozzle. The pulsed arccoherent radar lasers

jet geometry consists of a narrow cylindrical

chamber or capillary upstream of the nozzle

convergent section. A power supply is used to

charge the capacitors of a pulse-forming-

network. The power supply ramps up the voltage on the capacitors until the breakdown voltage of

the propellant between the electrodes is

quantum computation

quantum communication quantum computers quantum cryptography quantum mechanics **Turing machines** 

quantum computers

(added March 2000)
DEF Devices capable of performing quantum computations. There are many proposals for the physical basis of quantum computers. The 0 and 1 of a quantum bit (i.e., qubit) could be the ground and excited states of an atom in a linear ion trap; the polarizations of photons interacting in an optical cavity; or the excess of one nuclear spin state over another in a liquid sample in an NMR machine.

#### quantum numbers

DEF Anumber assigned to one f the various values of a quantized quantity in its descrete range. The quantum numbers arise from the mathematics of the wave equations. When the quantity has a quantum, the quantum number is the number of such quantums. A state may be described by giving a sufficient set of compatible numbers. In the cutomary forumlations, each quantum number is either an interger (which may be positive, negative, or zero) or an odd half-integer.

velocity measurement

### radiance

SN (DIRECTIONAL EMISSION RATE PER UNIT AREA OF RADIATION)
DEF In radiometry, a measure of the intrinsic radiant intensity emitted by a radiator in a given direction. It is the irradiance (radiant flux density) produced by radiation from the source upon a unit surface area oriented normal to the line between source and receiver, divided by the solid angle subtended by the source at the receiving surface. It is assumed that the medium between the radiator and receiver is perfectly transparent; therefore radiance is independent of attenuation between source and receiver.
