2000	129	56	33	36	55	21	15	17	75	35	17	19
1995	140	65	38	34	67	28	20	17	74	37	18	17
1990	145	70	43	27	64	27	22	13	81	43	21	15

¹Includes races other than white and black and origin not stated

NOTES: Pregnancy and fetal loss estimates for 1990-2000 have been revised and may differ from figures previously published. Due to sample size limitations in any given year, fetal loss proportions for teenagers for 1990-2002 are based on cycles 3 through 6 of the NSFG (conducted 1982, 1988, 1995, and 2002). Due to rounding, figures may not add to totals.

² Includes all persons of Hispanic origin of any race

³ Pregnancy estimates are sums of live births, induced abortions, and fetal losses

⁴ Live births are compiled from birth data collected from all birth certificates through the National Vital Statistics System; see references 5 and 6

⁵ Induced abortion estimates are based on the age distribution of abortions collected by the Centers for Disease Control and Prevention's National Center for Chronic Disease Prevention and Health Promotion, which are adjusted to national totals compiled by The Guttmacher Institute from their surveys of all known abortion providers; see references 7-9.

⁶ Spontaneous fetal losses from recognized pregnancies of all gestational periods as estimated from reports from women in the 1982, 1988, 1995, and 2002 National Surveys of Family Growth conducted by the National Center for Health Statistics, CDC. The rate of fetal loss depends on the degree to which losses at very early gestations are detected.

Table 2. Pregnancy, live birth, induced abortion, and fetal loss rates for teenagers 15-19 years, by age, race, and Hispanic origin: United States, 1990-2002

	15- 19 years				15- 17 years				18- 19 years
