

The results of this study would have provided needed information to determine if water quality is a limiting factor of the ecological success of shortnose sturgeon in this river system. When the initial study was conducted, however, high water temperatures and low dissolved oxygen contributed to a shortened experiment time. Although the results obtained were useful, the permit holder wants to repeat the experiment and requests authorization to obtain an additional 1000 fish for that purpose.

Dated: December 8, 2003.

**Stephen L. Leathery,**

### Department of the Army; Corps of Engineers

#### Intent To Prepare a Draft Environmental Impact Statement for a Proposed Reservoir Operating Plan in Conjunction With the Reservoir Operating Plan Evaluation Study for the Mississippi Headwaters

**AGENCY:** Department of the Army, U.S. Army Corps of Engineers, DoD.

**ACTION:** Notice of intent.

**SUMMARY:** The headwaters region of the Mississippi River, located in north-central Minnesota, contains a number of reservoirs operated by various private and public entities, including the Corps of Engineers (Corps) and the U.S. Forest Service (Forest Service). The current operating plans for the Corps and Forest Service reservoirs were developed over 40 years ago and are in need of revision
