

James T. Fulton III

RECENT ASSIGNMENTS: PACIFIC NORTHWEST NATIONAL LABORATORY

Project Management and Business Systems Integration, Capability Replacement Laboratory Project

Manage and direct the integrated delivery of project management and business support services in accordance with project objectives. Responsibilities include establishing and maintaining PNNL's project management and business systems for effective development and control of the project's approved baseline. Additionally, this includes actions necessary to ensure adherence to PNNL's Standards Based Management Systems. Specific services delivered to the project include: project baseline planning and control, communications, financial systems, contracts and procurements and records management.

PREVIOUS EXPERIENCE

Manager, 300 Area Transition Projects (1996-04) Manage Department of Energy Office of Environmental Management (DOE-EM) programs providing up to \$40 million in annual funding for nuclear facility maintenance and operation, removal of legacy waste and contamination from PNNL-occupied facilities in the 300 Area, laboratory waste management services, and facility modifications to improve functionality and effluent management programs. Significantly reduced facility operating costs by transitioning more than 110 operating laboratory and office facilities to stand-by waiting decommissioning. Successfully removed all regulated legacy waste from 300 Area facilities four years ahead of compliance schedule. In 2004, accepted collateral duties for managing the troubled K Basin East (KE) Basin North Load out Pit Sludge Project in support of the PNNL Environmental Technology Directorate. Successfully reestablished customer relationships and PNNL's credibility for project delivery with the funding sponsor.
