The 400 Individual Income Tax Returns Reporting the Highest Adjusted Gross Incomes Each Year, 1992-2000

Data Release

he Statistics of Income (SOI) Division announces a new statistical report in response to requests to provide data on the 400 individual income tax returns reporting the highest adjusted gross income (AGI) in each tax year from 1992 through 2000. The tax returns in the SOI annual samples of individual income tax returns for Tax Years 1992 through 2000 were sorted by AGI, and the 400 returns with the highest AGI in each year identified. Selected income and other tax return information are shown in the accompanying table for these 400 returns and for all returns in the SOI annual samples (weighted to represent national totals) for each tax year, 1992 through 2000.

In interpreting the data presented in the table, two aspects of the selection of returns are particularly important. First, the 400 returns with the highest AGI were selected in each year, although the total number of returns filed increased every year between 1992 and 2000. Thus, the top 400 returns

represent a declining share of the total number of returns filed. Second, 400 returns were separately identified each year based on AGI in that year. Thus, it did not matter for identification whether the taxpayer had been in the top 400 in any

Less than 25 percent of taxpayers appear more than once in the top 400 returns over the last 9 years.

prior year or appeared in the top 400 in any subsequent year. Over the 9 tax years 1992 through 2000, a total of 3,600 returns were identified for the table. Of the taxpayers who appear in this group of 3,600 returns, less than 25 percent appear more than once, and less than 13 percent appear more than twice. Thus, the data shown in the table represent a changing group of taxpayers over time, rather than a fixed group of taxpayers.
