Name: Jesse R. Graham

Company: individual

Comment on: Net metering

Comments: It is in the long-term best interest of TVA and local distributors to allow for "net metering services." Tennessee has historically lagged behind other states in promoting renewable energy. Now is the time to endorse and promote the ability of the consumer to decrease TVA's carbon footprint by not only using energy-efficient products but also by small time generation by solar and wind systems.

Credits for electric energy provided should also be the same as the grid purchase cost. There will be resistance from local electric utilities to keep the credit vs. purchase cost the same; talking with my provider (SVEC), they did everything but say it "is not in our (SVEC) best interest to have net metering services." Short term thinking...

Thanks for the chance to comment. Jesse R. Graham, Tracy City, TN
