SURFACE POWERED HAULAGE SAFETY (C/MNM)

Mine Safety and Health Administration (MSHA) - 2000

This computer CD contains visuals and discussion based on a classroom presentation developed by MSHA instructors. The training material is aimed at surface haulage accident prevention, and addresses several of the hazards that may arise in surface haulage operations at mines. It is primarily designed for equipment operators, supervisors, and safety personnel at surface mines, and may also be beneficial for others who work at a surface mine. The full presentation may take about an hour and a half. The same presentation is available on MSHA's website (www.msha.gov); however, the CD includes additional formats for those who wish to present the material full-screen with a computer projection system, without being connected to the internet, and/or wish to tailor the material to their operations.

To order IG-56, please complete the form below. You may do so "on-screen" and then print the completed form on your printer. Make certain to provide all the information requested in the form. For mailing instructions see below.
