**William H. Schulz<sup>1</sup>**  
2004

Open-File Reports are used for the dissemination of information that must be released immediately to a public need or for information that is not sufficiently refined to warrant formal publication. As such, Open-File Reports should not be viewed as final reports of major scientific investigations. Because of their preliminary nature and possibility of being superseded, Open-File Reports do not introduce new or revised geologic, stratigraphic, hydrologic, or taxonomic nomenclature. In particular, Article 484 of the North American Stratigraphic Code excludes open-file releases for the naming or revising of formal geologic units.

Any use of trade names in this publication is for descriptive purposes only and does not imply endorsement by the U.S. Geological Survey.
