## **Summary**

The Bay Area Air Quality Management District (the "District") is the local agency that regulates stationary sources of air pollution such as factories, industrial sites, and gasoline stations.

Under State law, the District must notify parents and neighbors before issuing a permit for a project that will increase emissions of any toxic air contaminant near a school. The purpose of this notice is to inform you of one such proposed project. Chevron Station #90878 has applied for a permit to increase the fuel throughput at an existing Gasoline Dispensing Facility at a site located at 2500 California Street in San Francisco. This is near the following schools: William L. Cobb Elementary School and St. Dominic's Elementary School

The District has prepared a health risk screening report that describes the possible health effects from the increased toxic air contaminants. Based on this screening, the maximum cancer risk is no more than 10 chances in a million for the nearest residents. For students who attend nearby schools, the maximum risk is no more than 0.08 chances in a million. These calculated levels of risk are within acceptable levels established by the District in its Risk Management Policy. The District plans to issue a Permit to Operate for the proposed project.

In order to put the preceding risk estimate into perspective, here are some other risk numbers for comparison:

- 1) The lifetime risk of cancer (excluding skin cancers) in the general population is about one in three, or 333,000 chances in a million.
- 2) The risk of cancer due to background concentrations of toxic air contaminants routinely monitored in the Bay Area is about 200 chances in a million.

## **Health Risk Screening Report is Available**

The proposed permit will increase emissions of the following toxic air contaminant(s): Benzene 25.6 lb/year

The potential risk values were calculated using a standard risk assessment methodology. This methodology assumes that residents are exposed to the maximum concentrations of toxic air contaminants for 24 hours a day continuously for 70 years. It further assumes that the school is occupied 8 hours per day, 200 days per year, every year. This type of analysis is considered to be health protective and is not meant to determine the actual risk; rather it is performed under strict guidelines as a means to compare the source to other regulated sources throughout the District. The District's Risk Management Policy can be viewed on our website at <http://www.baaqmd.gov/permit/toxics/rmpgen.htm>.

The Health Risk Screening Report describes the basis for the risk estimate. You may request a copy of this report by calling the District Permit Services Division at (415) 749-5040 or by downloading it from the District website at <http://www.baaqmd.gov/permit/pn.htm>.

### **Public Comment Period**

There is a thirty-day period for public response to this proposal. The public comment period for this project will end on **April 2<sup>nd</sup>, 2003**. If you wish to comment on the proposed project, you may make your comments in writing or by email. Please address them to:

**BAAQMD**  
**Chevron Station #90878 Public Notice Response**  
**Attn: Madhav Patil**  
**939 Ellis Street**  
**San Francisco, CA 94109**  
**mpatil@baaqmd.gov**

Alternatively, you may call (415) 749-5040 and leave a message up to one minute in length. Please include your name and mailing address, or name and telephone number, so that a District staff person may respond to your message.
