RECEIVED  
FSIS DOCKET ROOM  
04 MAR 15 AM 9:10

To Whom It May Concern "03-251F"

In agriculture today are close economics are very important factor for us to survive.

In regard to down cattle from injuries as to sick cattle there is an extreme difference. Animals that are injured can make a difference in our meat supply to this Nation which has begun to see ~~some~~ somewhat of shortage as well as add to our income.

We feel any injured animal can be slaughtered realizing the difference between down and sick cow.

It could be possible to slaughter our injured cattle with a certificate from a veterinarian identifying the difference in the two so we can slaughter injured animals.

Hope this committee and cattlemen can reach a safe solution to this agreement realizing it will take the cooperation of all parties.

Sincerely,

*Char-Mar Farm  
Dwight & Charles Brandenburg*
