# 4. CHEMICAL AND PHYSICAL INFORMATION

#### 4.1 CHEMICAL IDENTITY

Information regarding the chemical identity of atrazine is located in Table 4-1.

Atrazine is produced commercially in the United States as a technical-grade chemical with a purity of 92–97% (IARC 1999) to 99.9% (EPA 1983) active ingredient. Impurities in the former formulation included dichlorotriazines, hydroxytriazines, and tris(alkyl)aminotriazines.

<sup>a</sup>In air, atrazine is both present in the gas phase and associated with particulates (HSDB 2002). Conversion factors are only applicable for those compounds that exist entirely in the vapor phase. Therefore, while this conversion factor has been reported in the literature, its use is not recommended, as it will not provide an accurate reflection of ambient air atrazine concentrations.
