INTRODUCTION

The ninth in a series of bottom trawl surveys of the Gulf of Alaska groundfish and invertebrate resources was completed during the summer of 2005 by the Resource Assessment and Conservation Engineering (RACE) Division, Alaska Fisheries Science Center (AFSC), National Marine Fisheries Service (NMFS). The design of the 2005 biennial groundfish survey closely followed that used for prior Gulf of Alaska surveys conducted in 1984 (Brown 1986), 1987 (Stark et al. 1988), 1990 (Payne and Stark 1991), 1993 (Payne and Martin 1994), 1996 (Stark 1997), 1999 (Stark and Raring 2000), 2001 (Raring In prep. a), and 2003 (Raring In prep b). The purpose of the surveys is to describe and monitor the current distribution, abundance, and biological condition of the important groundfish stocks and continuation of the time series in support of groundfish stock assessments.

Historically, the Gulf of Alaska has been an important fishing grounds for a variety of groundfish species including Pacific ocean perch (*Sebastes alutus*); walleye pollock (*Theragra chalcogramma*); Pacific cod (*Gadus macrocephalus*); Pacific halibut (*Hippoglossus stenolepis*); sablefish (*Anoplopoma fimbria*); rockfishes (*Sebastes* spp.); arrowtooth flounder (*Atheresthes stomias*); lingcod (*Ophiodon elongatus*); Pacific herring (*Clupea pallasi*); and several invertebrate groups including crabs, scallops, and squid.

The Gulf of Alaska forms the northeastern border of the Pacific Ocean and comprises a complex of bathymetric features ranging from jagged, mountainous pinnacles to muddy gullies. The features provide a wide variety of habitats resulting in a complex ecosystem. The rugged bathymetry prevalent in many areas requires the use of a roller gear footrope for all bottom trawling operations. The survey area included the entire Gulf of Alaska continental shelf out to a depth of 1,000 m. The entire survey area is approximately 320, 648 km².

METHODS

The survey was conducted in four successive legs spanning 81 days aboard each of three chartered commercial trawlers, the FV *Gladiator*, the FV *Northwest Explorer* and FV *Sea Storm*, for an overall survey effort of 243 days at sea. The survey ran from 18 May to 6 August 2005. Sampling began in the area of the Islands of Four Mountains (170° W long.) and proceeded eastward across the Gulf of Alaska to Dixon Entrance ($133^{\circ} 25'$ W long.) (Fig 1).

Vessels and Gear Characteristics

All three chartered vessels are house-forward stern trawlers with hydraulic net reels and paired constant tension hydraulic trawl winches with 2.54 cm diameter steel cable (2.98 cm diameter for the FV *Northwest Explorer*) approximately 1,800 m in length. All vessels have articulating hydraulic cranes for handling catches and gear. The FV *Gladiator* and FV *Sea Storm* each have a single main diesel engine with a single nozzled propeller. The FV *Gladiator* is 38 m long overall (LOA) with a main engine developing 1,715 continuous horsepower (HP). The FV *Sea Storm* is 37.5 m LOA with a 1,800 HP main engine. The FV *Northwest Explorer* is 49.4 m LOA with twin main engines developing 1,800 continuous HP. Each vessel is equipped with a global positioning system (GPS) integrated with radar, computerized plotting, and autopilot. Other essential electronics supplied by the vessels include color video fish finders, recording depth profilers, and trawl warp measuring systems. The vessel-owned GPS receivers recorded trawling position, time, and trackline position.

All operations were conducted in compliance to standard methods as documented in Appendix 1 of “NOAA Protocols for Groundfish Bottom Trawl Surveys of the Nation’s Fishery Resources” (Stauffer 2004). The standard Poly-Nor’Eastern trawl with roller gear was used exclusively by all vessels to trawl the 865 attempted survey stations. The headrope is made of galvanized wire rope and is 27.2 m long with twenty-one 30-cm diameter plastic floats. The footrope is constructed of the same material and is 24.2 m

long with sixteen 35.6-cm diameter rubber wing bobbins. The net was spread with 1.8 × 2.7 m steel V-doors weighing approximately 800 kg each.

A SCANMAR net mensuration system measured net width (wingtip-to-wingtip) and headrope height and communicated these measurements acoustically to a recording computer in real time. After the haul was completed, data from a footrope mounted bottom contact sensor developed by the RACE Division was used to determine the actual time on bottom for the trawl. Depth of each tow was measured and monitored with a bathythermograph mounted on the headrope of the net.

Survey Design and Operations

The 2005 survey design employed a stratified random sampling design consistent with previous surveys. The Gulf of Alaska was divided into 59 strata categorized by depth interval, type of geographical area (e.g., banks, gullies, and slopes) and International North Pacific Fisheries Commission (INPFC) statistical area boundaries (Fig.1). Depth intervals were defined as less than 100, 101-200, 201-300, 301-500, 501-700 and 701-1,000 m. Within each stratum the sampling density was assigned based on expected catch rate variances and ex-vessel value for selected species from past surveys, with an imposed minimum of two samples per stratum. After the number of stations was allocated to each stratum, station grid cells were chosen randomly from a 5 × 5 km grid laid over the survey area. All trawling procedures and protocols are described in Stauffer (2004).

During survey operations, the first trawlable location encountered in the assigned grid cell was sampled. In choosing the exact location, only the trawlability of the bottom, as indicated by the echo sounder, was considered and not the presence or absence of fish sign. The target tow duration on the sea bottom was 15 minutes. In cases where there was not enough trawlable bottom for a full 15 minute tow, shorter tows were completed. Attempts were made to maintain constant bottom depth, trawl wingspread, and towing

speed (3 knots) during each tow. However, when depths changed significantly, the trawl warp was adjusted to maintain wingspread and bottom contact. The trawl opening tended to increase horizontally and decrease vertically with depth due to the increased amount of deployed trawl cable.

Catches weighing less than approximately 1,000 kg were completely sorted to species, weighed, and counted. Larger catches were completely sorted also, however weights and numbers of the most abundant species were determined either by weighing with a load cell or by using volumetric calculations and extrapolation. Biological data and specimens collected included fish lengths and weights, age structures, sexual maturities and special collections of stomachs, tissues, whole fish, and invertebrates. Individual fish weight data were collected using a Marel motion-compensated electronic scale.

Water temperature profiles were collected at each station using a headrope-mounted bathythermograph data logger and additional sea surface temperatures were measured using calibrated bucket thermometers. A more detailed account of relative abundance and biomass estimates of the major groundfish species will appear in a future AFSC Technical Memorandum.

RESULTS

Sampling operations proceeded east from the Islands of Four Mountains along the shelf to Dixon Entrance in depths ranging from 22 to 992 m. A total of 839 successful hauls were completed of an 865 attempted tows. The average net opening was 16 m wide by 6.7 m high. Survey tow duration averaged 15.52 minutes, distance fished averaged 1.44 km and towing speed averaged 5.6 km (3.0 nautical miles) per hour over the bottom. Net dimensions and towing speed and duration data fell within expected values (Stauffer 2004).

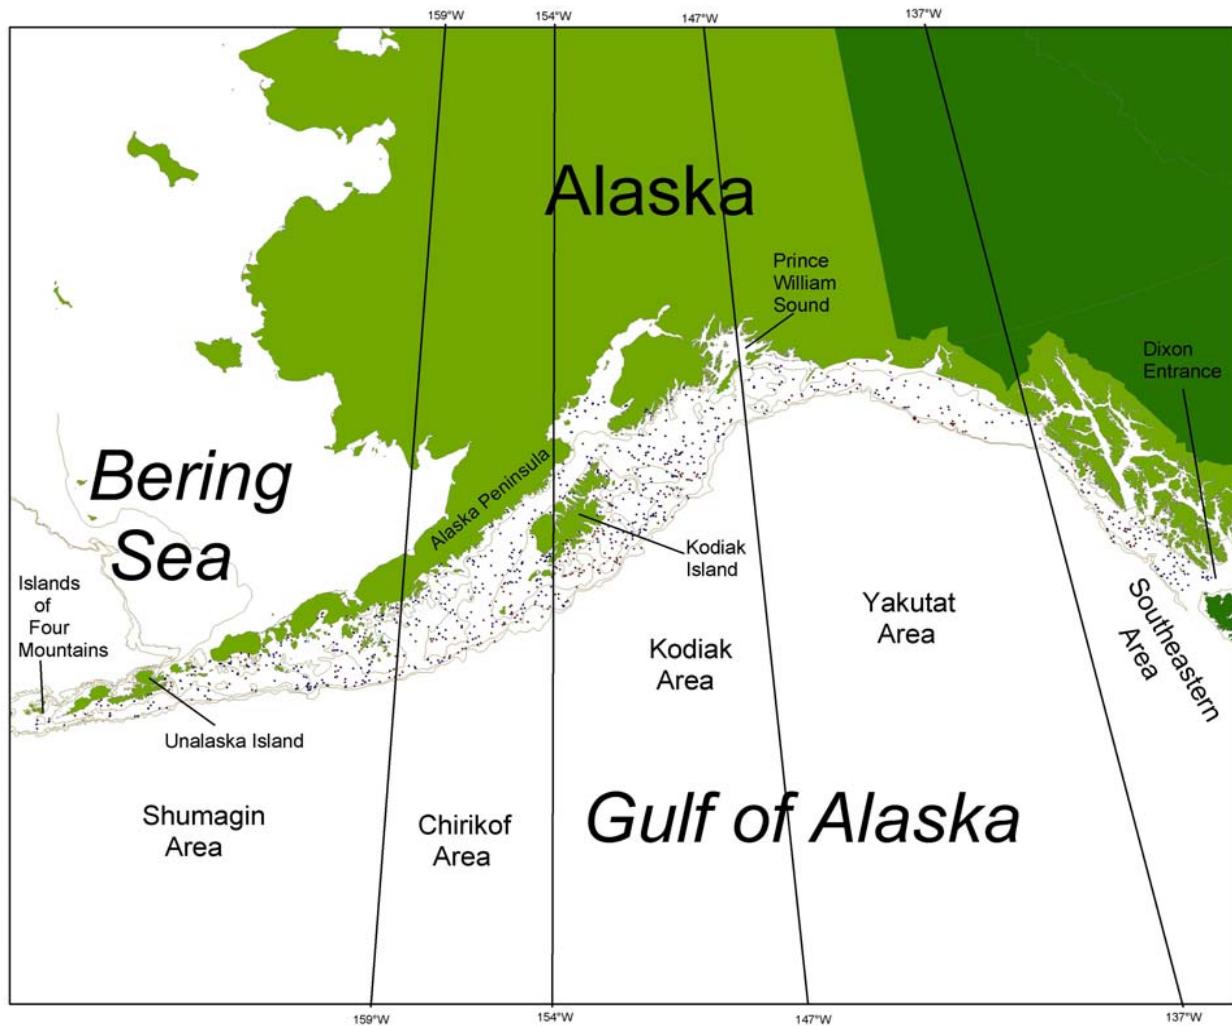

Figure 1. -- Survey stations attempted during the 2005 NMFS biennial Gulf of Alaska bottom trawl survey. Meridians shown define INPFC Area boundaries.

Catches included more than 180 species of fish and 340 species of invertebrates. The dominant fish species are ranked by mean catch per unit effort in Table 1, expressed as kilograms of catch per hectare ($10,000\text{ m}^2$) of bottom area within each of the five sampled INPFC statistical areas. The species highest in total catch abundance (by weight) over the entire survey area were arrowtooth flounder (59.37 kg/ha), Pacific ocean perch (23.95 kg/ha), giant grenadier (18.35 kg/ha) and Pacific halibut (17.65 kg/ha). Catch rates were generally highest in the Shumagin INPFC area ($170^\circ\text{ W long. to }159^\circ\text{ W long.}$) followed by the Kodiak INPFC area ($154^\circ\text{ W long. to }147^\circ\text{ W long.}$). The Shumagin INPFC area had the highest catch rate of walleye pollock (21.38 kg/ha) as well as Pacific ocean perch (38.47 kg/ha, respectively) and Pacific cod (20.55 kg/ha), while the Kodiak INPFC area produced the highest rate for Pacific halibut (27.64 kg/ha) and arrowtooth flounder (87.23 kg/ha). Catch rates were generally lowest in the Yakutat and Southeast INPFC areas ($147^\circ\text{ W long. to Dixon Entrance}$). Estimates of invertebrate catch rates are probably conservative as a consequence of using roller gear footropes on the trawls. Deepwater species occurring in catches along the continental slope included the grenadier family, sablefish, shortspine thornyhead (*Sebastolobus alascanus*), longspine thornyhead (*Sebastolobus altivelis*) and shortraker rockfish (*Sebastodes borealis*).

The biological data collected to determine length frequency distributions included measurements of over 291,000 fish representing 90 species. Specimen data were collected from 51 species including 14 rockfish, 8 flatfish, 6 skates, 5 salmonids, 3 gadids, and 2 sharks. The specimen data collection included 11,988 age structures and 13,347 individual weight measurements. Additionally, over 1,753 stomach samples were collected from 13 different species for AFSC trophic interaction studies.

Oceanographic data included sea temperature measurements and bottom type classification. Sea surface temperatures were measured at 897 survey stations and averaged 10.83°C with a range of 5.1°C to 17.0°C . Bottom temperatures (fishing depth) were taken from 894 stations and averaged 5.77°C with a range of 3.1°C to 10.7°C .

ORGANIZATION OF REPORT AND DATA STANDARDIZATIONS

The purpose of this report is to provide the fishing industry and public with pertinent catch information collected by the survey vessels. The report focuses on data collected at individual stations for the principal species encountered during the survey. The fishing results are presented in Section 1 for the FV *Gladiator*, Section 2 for the FV *Northwest Explorer*, and Section 3 for the FV *Sea Storm*. Each section has two parts: 1) station charts with haul numbers plotted adjacent to their respective geographical locations and 2) summary listings of species caught in each haul. A combined fishing log for all three vessels showing catches ranked by weight for selected commercial species is listed in Section 4. The combined fishing log includes catches of rockfish species, Atka mackerel (*Pleurogrammus monopterygius*), walleye pollock, Pacific cod, flatfish species, lingcod, Pacific herring, king and Tanner crab, scallops, shrimp, octopus, and red squid (*Berryteuthis magister*). Hauls without catches and special invertebrate hauls were omitted from the catch listings.

Explanations of the gear performance codes appearing in the fishing logs are summarized in Table 2. Fishing gear specifications and diagrams are presented in Section 5.

Table 2.--Performance codes used during the 2005 Gulf of Alaska bottom trawl survey.

Codes	Performance
0	Good performance
1.1	Satisfactory performance, minor hang(s)
1.11	Satisfactory performance, completed tow
1.12	Satisfactory performance, hauled back early due to hang(s)
1.2	Satisfactory performance, major hang, stopped forward progress of vessel
2.1	Satisfactory performance, wing damaged
2.4	Satisfactory performance, belly damaged
3.13	Satisfactory performance, Alaskan crab pot
3.2	Satisfactory performance, caught on longline gear
4	Satisfactory performance, caught unspecified object
4.1	Satisfactory performance, caught large rock
4.4	Satisfactory performance, large fish catch affected net performance
4.6	Satisfactory performance, large kelp catch affected performance
5	Satisfactory performance, unspecified gear performance problem
5.1	Satisfactory performance, net came off bottom
5.2	Satisfactory performance, net improperly configured, unspecified reason
5.41	Satisfactory performance, door digging or falling over
5.5	Satisfactory performance, net crabbing severely
5.8	Satisfactory performance, light footrope contact
6	Satisfactory, unspecified problems
6.1	Satisfactory performance, depth change over tow exceeds survey defined limits
6.22	Satisfactory performance, wire out greater than recommended scope
6.24	Satisfactory performance, scope changed during tow
6.3	Satisfactory performance, unspecified mechanical problems
6.31	Satisfactory performance, haulback delayed due to mechanical problems
-1	Unsatisfactory performance, hung up
-1.12	Unsatisfactory performance, hauled back early due to hang(s)
-1.2	Unsatisfactory performance, major hang, stopped forward progress of vessel
-2	Unsatisfactory performance, unspecified gear damage
-2.1	Unsatisfactory performance, wing damaged
-2.2	Unsatisfactory performance, breastline damaged
-2.4	Unsatisfactory performance, belly damaged
-2.5	Unsatisfactory performance, bridle damaged
-2.7	Unsatisfactory performance, net completely destroyed

Table 2.--(Continued)

-3.1	Unsatisfactory performance, caught pot, unspecified type
-3.13	Unsatisfactory performance, Alaskan crab pot
-4	Unsatisfactory performance, caught unspecified object
-4.1	Unsatisfactory performance, caught large rock
-4.4	Unsatisfactory performance, large fish catch affected net performance
-4.6	Unsatisfactory performance, large kelp catch affected performance
-5.1	Unsatisfactory performance, net came off bottom
-5.2	Unsatisfactory performance, net improperly configured, unspecified reason
-5.23	Unsatisfactory performance headrope/footrope tangled
-5.6	Unsatisfactory performance, codend not closed properly
-5.7	Unsatisfactory performance, net unable to reach bottom due to strong currents
-5.8	Unsatisfactory performance, light footrope contact
-6	Unsatisfactory performance, unspecified problems
-6.1	Unsatisfactory performance, depth change over tow exceeded normal limits

Fishing Log for the FV *Sea Storm*

- Summary listings of species catches by haul
- Haul start/end latitude and longitude in degrees, minutes, and decimal minutes
- Bottom depth in meters
- Duration of tow in minutes
- Distance fished in kilometers
- Catch weight in kilograms of principal species
- Total catch weight in kilograms of all species

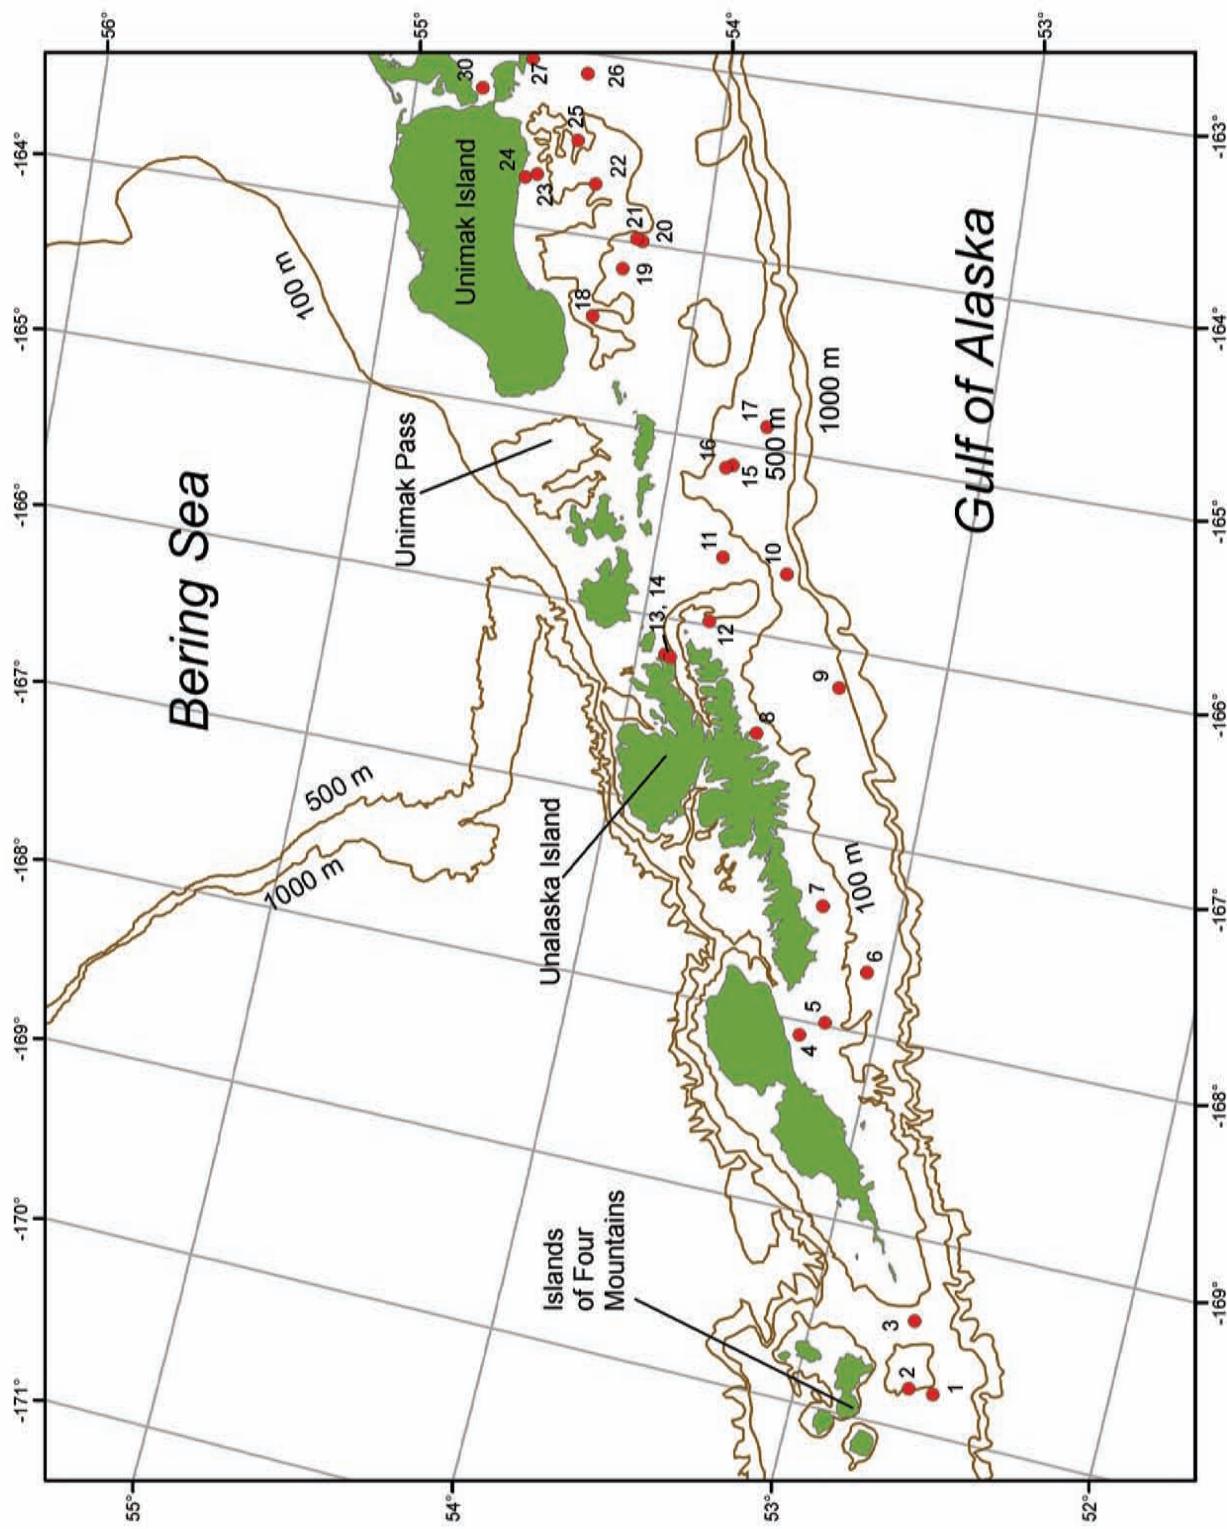

Figure 11.—Stations surveyed by the chartered trawler FV *Sea Storm* from the Islands of Four Mountains to Unimak Island.

Section 4

Ranked Catch Per Unit Effort by Species or Species Group

- The summary listings of catch rates for selected species are presented as kilograms of catch per hectare (kg/ha) trawled.
- Average individual animal weight (kg).
- Vessel codes (147 = *FV Gladiator*, 134 = *FV Northwest Explorer* and 143 = *FV Sea Storm*)
- Average bottom depth is in meters

Principal species CPUE and average individual weight by vessel, haul, and depth during the 2005 biennial Gulf of Alaska survey.

Section 5

Trawl and Accessories

Specifications and Diagrams

Specifications of the trawl, otter doors, and accessory gear used by the chartered trawlers *Gladiator*, *Northwest Explorer*, and *Sea Storm* during the 2005 bottom trawl survey of the Gulf of Alaska.

Equipment	Specifications
Netting -	Polyethylene, 12.7 cm (5 in), 4 and 5 millimeter (mm) twine.
Headrope -	27.2 m (89 ft-1 in), 1.3 cm (1/2 in) 6 x 19 gauge galvanized wire rope, wrapped with 1 cm (3/8 in) 3-strand polypropylene rope.
Footrope -	24.9 m (81 ft-7 in), 1 cm (3/8 in) 6 x 19 gauge galvanized wire rope wrapped with polypropylene rope.
Fishing line -	24.3 m (79 ft-7 in), shot-peened long-link chain. Safe working load 5.1 metric ton (t).
Roller gear -	24.2 m (79 ft-6 in), 1.9 cm (3/4 in) diameter, 6 x 19 gauge galvanized wire rope strung through 10.2 cm (4 in) diameter rubber disks, 16 rubber wing bobbins 35.6 cm (14 in) in diameter and 34 galvanized rings hung with 30.5 cm (12 in) long dropper chain.
Breastlines -	1 cm (3/8 in) 6 x 19 gauge galvanized wire rope wrapped with 1 cm polypropylene. Top corner 5.9 m (19 ft-6 in); bottom corner 2.6 m (8 ft-8 in); top side panel 5.9 m; bottom side panel 9.3 m (30 ft-6 in).
Riblines -	* 1.9 cm (3/4 in) Sampson [*] 2 and 1 Duralon [*] . Top two 34.8 m (114.17 ft) and bottom two 31.8 m (104.45 ft), hung 98% of stretched seam length.
Flotation -	* Cocolac [*] trawl floats, 30.5 cm (12 in) diameter, 21 pieces. Buoyancy 10.2 kg (22.4 lb.) each and rated for 800 m (400 fm) depth.
Codend liner -	Nylon, no. 18, 3.2 cm (1-1/4 in) stretched mesh (M), 315 M circumference and 200 M deep, laced to inner bag. When stretched the liner protrudes 61-91 cm (2 to 3 ft) beyond codend.
Restrictors -	Polypropylene rope, 2.5 cm (1 in) diameter, 4.3 m (14 ft) circumference and secured loosely to codend at each ribline, 1.2 m (4 ft) apart, 5 pieces.
Splitting gear -	1.3 cm (1/2 in) diameter 6.4 m (21 ft) long galvanized wire rope is passed through four galvanized steel rings which are secured to the codend with 1.3 cm diameter braided nylon "spiders".
Side seams -	Panels are joined to each other gathering 3 M (4 knots) from each panel. Panels that are secured to framing lines have a selvaged edge created by gathering 3 M.
Rigging -	3 dandy lines each side, 1.6 cm (5/8 in) diameter galvanized wire rope, 54.9 m (30 fm) long.
Doors -	1.8 m x 2.7 m (6 x 9 ft), steel V-doors, approximately 800 kg (1,800 lb) each.
Chafing gear -	Polypropylene 10 in M, 1 cm (3/8 in) polyrope hog-ringed (or interwoven) together, 46 M circumference and 21 M deep, laced to outer bag 68.5 M up from the pucker rings.

Figure 17. Trawl accessories diagrams

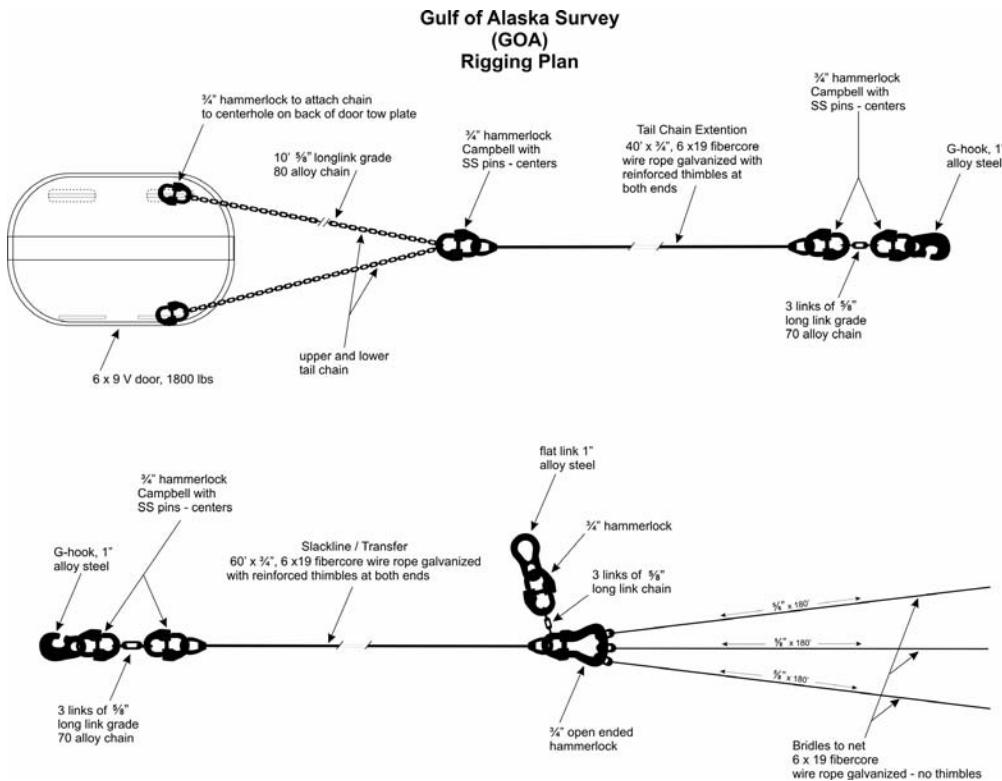

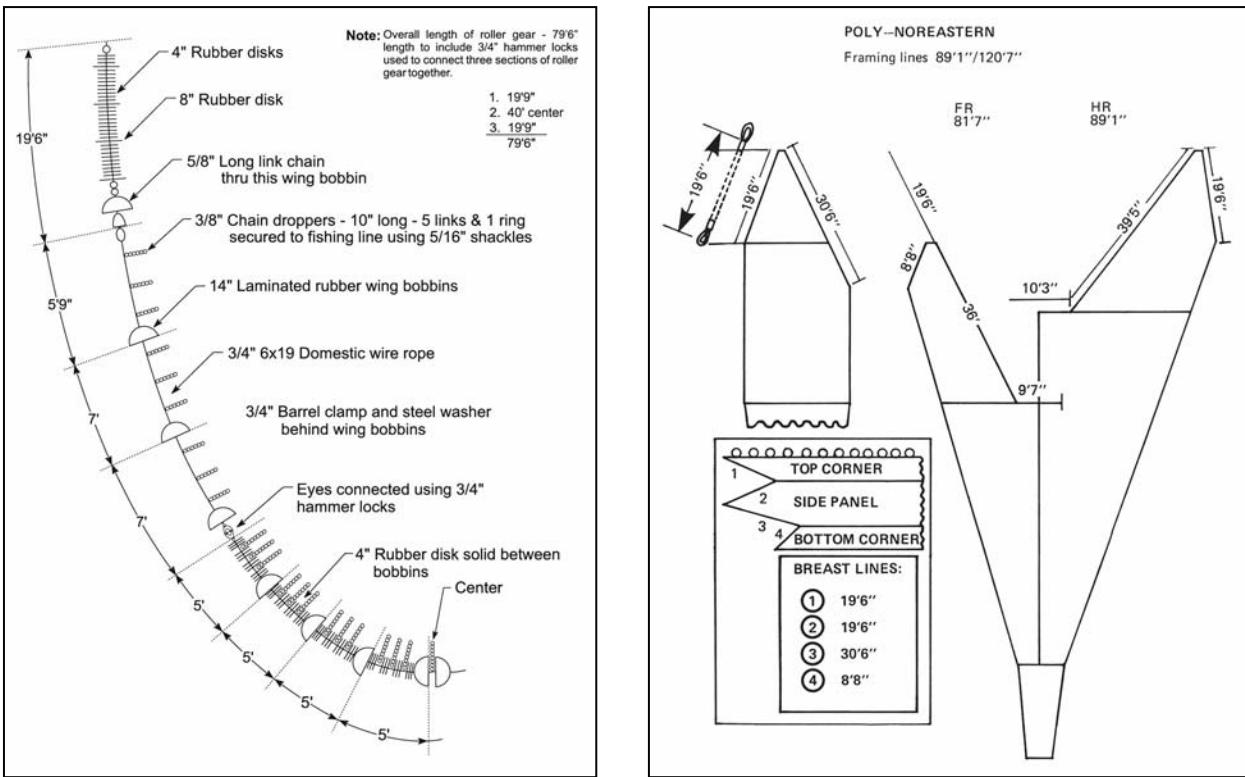

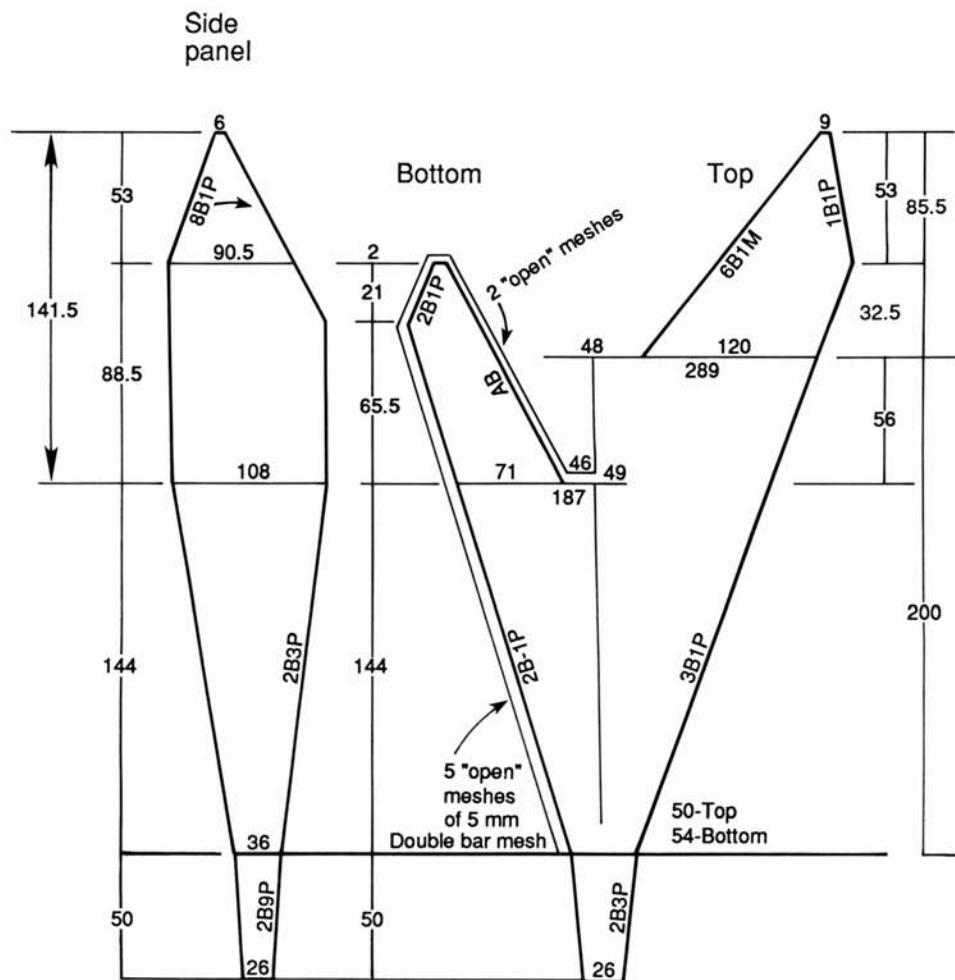

Figure 18. Poly Nor'Eastern Diagram

POLY-NOREASTERN (Race)

Total mesh counts

Twine sizes: top and sides 4mm
bottom and intermediate 5mm

Web: Chaffing strip along inside of Bottom wings and Busom. Cut 8 meshes wide.
5 mm Double Bar mesh, goring 3 meshes on each side (leaving 2 open meshes).
Secure 3 mesh of gore on inside (Bar Cut) of Bottom wings, and securing other gore to footrope (Bolsh).

Date: 3/93
