## Bureau of Transportation Statistics

Our mission: To lead in developing transportation data and information of high quality and to advance their effective use in both public and private transportation decisionmaking.

Our vision for the future: Data and information of high quality supporting every significant transportation policy decision, thus advancing the quality of life and the economic well-being of all Americans.

## New Hampshire Fast Facts 2000

Transportation System Extent
All public roads: 15,211 miles
Interstate: 224 miles
Road bridges: 2,348
Railroad trackage: 415 miles
Inland waterways: 8 miles
Public use airports: 26 ( 3 certificated for air carrier operations $)^{1}$

## Vehicles and C onveyances

Automobiles registered: 670 thousand
Light trucks registered: 355 thousand
Heavy trucks registered: 5,800
Buses registered: 1,700
Motorcycles registered: 49,000
Numbered boats: 98,000

## Geographic

Land area: 8,969 sq. miles (rank: 44)
Percent of land area owned by federal government: $13.2^{4}$ (rank: 14)

Persons per square mile: 137.8 (rank: 20)
Highest point: Mount Washington (6,288 ft.)

Lowest point: Atlantic Ocean ( 0 ft .)

## Political Subdivisions

Counties: 10
Municipal governments: $13^{3}$
Congressional districts: 2

## Demographic

Population: 1,235,786 (rank: 41)
Percent urban population: $51^{2}$ (rank: 44)

## Socioeconomic

Gross state product: $\$ 44$ billion $^{4}$ (rank: 38)
Civilian labor force: 686 thousand ${ }^{4}$
(rank: 40)
Median household income: \$48,928
(rank: 8)

## Commuting (percent of workers)

Car, truck, or van-drove alone: 83.3
Car, truck, or van-carpooled: 9.3
Public transportation (including taxi): 0.6
Walked: 2.3
Other means: 0.8
Worked at home: 3.8

The Bureau of Transportation Statistics (BTS) presents a profile of transportation in New Hampshire-part of a series covering the 50 states and the District of Columbia. This collection of transportation information from BTS, other federal government agencies, and other national sources provides a picture of the state's infrastructure, freight movement and passenger travel, safety, vehicles, economy and finance, and energy and environment.

All tables do not necessarily appear in every state profile report due to geographic and other characteristics. For example, border-crossing data are given only for states bordering Canada and Mexico. Data source and accuracy profiles are provided at the end of the report.

## Table of Contents

## A Infrastructure

TABLES ..... PAGE
New Hampshire Public Road Length, Miles by Functional System: 1995-2000 ..... A-1
Public Roads in New Hampshire by Ownership: 2000 ..... A-1
New Hampshire Toll Roads: 2001 ..... A-2
New Hampshire Toll Bridges: 2001 ..... A-2
New Hampshire Road Condition by Functional System - Rural: 1995-2000. ..... A-3
New Hampshire Road Condition by Functional System - Urban: 1995-2000. ..... A-4
Highway Bridge Condition: 2001 ..... A-5
Characteristics of Directly Operated Motor Bus Transit in New Hampshire: 2000. ..... A-7
Civil and Joint-Use Airports, Heliports, STOLports, and Seaplane Bases in New Hampshire: 2002 ..... A-8
New Hampshire Commercial Service Airport Enplanements: 2000 ..... A-8
Freight Railroads in New Hampshire and the United States: 2000 ..... A-9
Freight Railroads Operating in New Hampshire by Class: 2000 ..... A-10
New Hampshire Water Ports Ranked in Top 150 U.S. Ports by Tonnage: 2000 ..... A-11
Inland Waterway Mileage: 2000 ..... A-11

|  | N | N | N | N | N | 217 |

KEY: $\mathrm{N}=$ data do not exist.
NOTE: In 2000, the Federal Highway Administration began reporting road condition for rural major collectors using the International Roughness Index, if available. In prior years, data were only available using the Present Serviceability Rating.

Figure 1-1: Rural Road Conditions in New Hampshire: 2000

NOTE FOR DATA ON THIS PAGE: Road condition is based on measured pavement roughness using the International Roughness Index (IRI). IRI is a measure of surface condition. A comprehensive measure of pavement condition would require data on other pavement distresses such as rutting, cracking, and faulting.

SOURCE FOR DATA ON THIS PAGE: U.S. Department of Transportation, Federal Highway Administration, Highway Statistics, Washington, DC: annual editions, tables HM-63 and HM-64, available at http://www.fhwa.dot.gov/ as of Feb. 1, 2002.

# Table 1-8: Characteristics of Directly Operated Motor Bus Transit in New Hampshire: 2000 

|  | Directional route miles |  |  |
| :--- | :---: | :---: | :---: |
| Transit agency | Exclusive <br> right-of-way | Controlled <br> right-of-way | right-of- <br> way |
| Manchester Transit Authority | 0.0 | 0.0 | 172.8 |

NOTES: Directional route-miles is the mileage in each direction over which public transportation vehicles travel while in revenue service. Directional route-miles are a measure of the facility or roadway, not the service carried on the facility such as the number of routes or vehicle-miles. Directional route-miles are computed with regard to direction of service, but without regard to the number of traffic lanes or rail tracks existing in the right-of-way. Exclusive right-of-way refers to lanes reserved at all times for transit use and other high occupancy vehicles (HOVs). Controlled right-of-way refers to lanes restricted for at least a portion of the day for use by transit vehicles and other HOVs. Mixed right-of-way refers to lanes used for general automobile traffic.
Directly operated transit is service provided by a public transit agency using its own employees to operate transit vehicles. Transit service purchased under contract by a public transit agency is not considered directly operated transit.

Table 1-11: Freight Railroads in New Hampshire and the United States: 2000

| Type of railroad | Number of railroads |  | Miles operated ${ }^{2}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | United States | New Hampshire |  |  |
|  | United States | New Hampshire |  | Excluding trackage rights | Induding trackage rights | Percent of U.S. total |
| Total | 562 | 10 | 172,101 | 360 | 415 | 0.2 |
| Class I | 8 | 0 | 120,597 | 0 | 0 | 0.0 |
| Regional | 35 | 1 | 20,978 | 148 | 172 | 0.8 |
| Local | 304 | 8 | 21,512 | 200 | 231 | 1.1 |
| Switching and terminal | 213 | 1 | 7,425 | 12 | 12 | 0.2 |
| Canadian ${ }^{1}$ | 2 | 0 | 1,589 | 0 | 0 | 0.0 |

${ }^{1}$ Refers to non-Class I, Canadian-owned lines.
${ }^{2}$ Miles operated is in terms of railroad so that a mile of single track is counted the same as a mile of double track. Sidings, turnouts, yard switching mileage, and mileage not operated are excluded. Miles operated under trackage rights provided by another (owning) railroad are included.

## NOTES:

1. As defined by the Surface Transportation Board in 2000, a Class I Railroad is a railroad with operating revenues of at least $\$ 261.9$ million.
2. A Regional Railroad is a non-Class I, line-haul railroad operating 350 or more miles of road or with revenues of at least $\$ 40$ million or both.
3. A Local Railroad is a railroad which is neither a Class I nor a Regional Railroad, and is engaged primarily in line-haul service.
4. A Switching and Terminal Railroad is a non-Class I Railroad engaged primarily in switching and/or terminal services for other railroads.

| Kentucky | 1,591 | Tennessee | 946 |
| Louisiana | 2,823 | Texas | 834 |
| Maine | 73 | Virginia | 674 |
| Maryland | 532 | Washington | 1,057 |
| Massachusetts | 90 | West Virginia | 682 |
| Minnesota | 258 | Wisconsin | 231 |

NOTES: Waterway mileages were determined by including the length of channels 1) with a controlling draft of nine feet or greater, 2 ) with commercial cargo traffic reported for 1998 and 1999, but 3) were not offshore (i.e., channels in coastal areas included only the miles from the entrance channel inward). Channels within major bays are included (e.g., Chesapeake Bay, San Francisco Bay, Puget Sound, Long Island Sound, major sounds and straits in southeastern Alaska). Channels in the Great Lakes are not included, but waterways connecting lakes and the St. Lawrence Seaway inside the United States are included.

NOTE: Fatalities in this table include passenger car occupants only. O ccupants of other vehicle types - light trucks, heavy trucks, motorcycles, and buses - are excluded as are other types of highway related fatalities such as pedestrian fatalities. Hence, the fatalities represented here are lower then those in table 2-1. Percents may not add to totals due to rounding.

Table 2-3. Key Provisions of Safety Belt Use Laws: 2000

| State | Effective ${ }^{1}$ | Enforcement ${ }^{2}$ | Fine | Seats | Vehicles exempted ${ }^{3}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Alabama | 7/18/92 | Primary | \$25 | Front | Designed for more than 10 passengers |
| Alaska | 9/12/90 | Secondary | \$15 | All | School bus |
| Arizona | 1/1/91 | Secondary | \$10 | Front | Designed for more than 10 passengers; model year before 1972 |
| Arkansas | 7/15/91 | Secondary | \$25 ${ }^{4}$ | Front | School bus, church bus, public bus |
| California | 1/1/86 | Primary | \$20 ${ }^{5}$ | All | None |
| Colorado | 7/1/87 | Secondary | \$15 | Front | Passenger bus, school bus |
| Connecticut | 1/1/86 | Primary | \$15 | Front | Truck or bus over 15,000 lbs. |
| Delaware | 1/1/92 | Secondary | \$20 | Front | None |
| District of Columbia | 12/12/85 | Primary | \$50 ${ }^{6}$ | All | Seating more than 8 people |
| Florida | 7/1/86 | Secondary | \$30 | Front | School bus, public bus, truck over 5,000 lbs. |
| Georgia | 9/1/88 | Primary | \$15 | Front | Designed for more than 10 passengers, pickup |
| Hawaii | 2/16/85 | Primary | \$45 | Front | Bus or school bus over 10,000 lbs. |
| Idaho | 7/1/86 | Secondary | \$5 | Front | O ver 8,000 lbs. |
| Illinois | 7/1/85 | Secondary | \$25 | Front | None |
| Indiana | 7/1/87 | Primary | \$25 | Front | Truck, tractor, RV |
| lowa | 7/1/86 | Primary | \$10 | Front | None |
| Kansas | 7/1/86 | Secondary | \$10 | Front | Designed for more than 10 people, truck over $12,000 \mathrm{lbs}$. |
| Kentucky | 7/13/94 | Secondary | \$25 | All | Designed for more than 10 people |
| Louisiana | 7/1/86 | Primary | \$25 ${ }^{7}$ | Front | Manufactured before 1/1/81 |
| Maine | 12/27/95 | Secondary | \$50 | All | None |
| Maryland | 7/1/86 | Primary | \$25 | Front | Historic vehicle |
| Massachusetts | 2/1/94 | Secondary | \$25 | All | Truck over 18,000 lbs., bus, taxi |
| Michigan | 7/1/85 | Primary | \$25 | Front | Bus |
| Minnesota | 8/1/86 | Secondary | \$25 | Front | Farm pickup truck |
| Mississippi | 3/20/90 | Secondary | \$25 | Front | Farm vehicle, bus |
| Missouri | 9/28/85 | Secondary | \$10 | Front | Designed for more than 10 people, truck over $12,000 \mathrm{lbs}$. |
| Montana | 10/1/87 | Secondary | \$20 | All | None |
| Nebraska | 1/1/93 | Secondary | \$25 | Front | Manufactured before 1973 |
| Nevada | 7/1/87 | Secondary | \$25 | All | Taxi, bus, school bus |
| New Hampshire | None | NA | NA | NA | NA |
| N ew Jersey | 3/1/85 | Secondary | \$20 | Front | None |
| New Mexico | 1/1/86 | Primary | \$25 | Front | Vehicle over 10,000 lbs. |
| New York | 12/1/84 | Primary | \$50 | Front | Bus, school bus, taxi |
| North Carolina | 10/1/85 | Primary | \$25 | Front | Designed for more than 10 people |
| North Dakota | 7/14/94 | Secondary | \$20 | Front | Designed for more than 10 people |

|  |  |  |  |  | Farm vehicle, truck, truck tractor, RV |
| Oregon | 12/7/90 | Primary | \$75 | All | None |
| Pennsylvania | 11/23/87 | Secondary | \$10 | Front | Truck over 7,000 lbs. |
| Rhode Island | 6/18/91 | Secondary | \$50 | All | None |
| South Carolina | 7/1/89 | Secondary | \$10 | All | School bus, public bus |
| South Dakota | 1/1/95 | Secondary | \$20 | Front | Bus, school bus |
| Tennessee | 4/21/86 | Secondary | \$50 | Front | Vehicle over 8,500 lbs. |
| Texas | 9/1/85 | Primary | \$50 | Front | Designed for more than 10 people, truck over 15,000 lbs. |
| Utah | 4/28/86 | Secondary | \$45 | Front | Vehicle over 10,000 lbs., school/public bus, taxi |
| Vermont | 1/1/94 | Secondary | \$10 | All | Bus, taxi |
| Virginia | 1/1/88 | Secondary | \$25 | Front | Designed for more than 10 people, taxi |
| Washington | 6/11/86 | Secondary | \$35 | All | Designed for more than 10 people |
| West Virginia | 9/1/93 | Secondary | \$25 | Front | Designed for more than 10 people |
| Wisconsin | 12/1/87 | Secondary | \$10 | All | Taxi, farm truck |
| Wyoming | 6/8/89 | Secondary | \$25 | Front | Designed for more than 10 people, bus |

${ }^{1}$ Effective date of first belt law in the state; ${ }^{2}$ Primary enforcement enables police officers to stop vehicles and write citations whenever they observe a violation of the seat belt law. Secondary enforcement allows police officers to write a citation for seat belt infractions only after stopping a vehicle for some other traffic infraction; ${ }^{3}$ Most states exempt vehicles not manufactured with seat belts; ${ }^{4}$ Plus 3 points on license; ${ }^{5}$ Fine for first offense;
${ }^{6}$ Plus 2 points on license; ${ }^{7}$ Penalty could include 30 days in jail.
KEY: NA = not applicable; RV = recreational vehicle.

KEY: BAC = blood alcohol concentration; DWI = driving while intoxicated; $Y=$ yes; $N=$ no; $A=$ alternative; $S=$ suspension; $R=$ revocation; N ms = no mandatory sanction.

NOTES: An "administrative per se law" allows a state's driver licensing agency to either suspend or revoke a driver's license based on a specific alcohol (or drug) concentration or on some other criterion related to alcohol or drug use and driving. Such action is independent of any licensing action related to a DWI criminal offense. The term "illegal per se" refers to state laws that make it a criminal offense to operate a motor vehicle at or above a specified alcohol (or drug) concentration in the blood, breath, or urine. In those columns showing mandatory sanctions, "nms" does not mean that a state does not have a sanction. It only means that the state does not have a mandatory sanction for that offense or violation.

${ }^{1}$ Many roads, particularly urban interstates, often have a lower posted speed limit than the maximum allowable shown in this table.
${ }^{2}$ Limited-access roads are multi-laned roads with restricted access using exit and entrance ramps rather than intersections.
KEY: $N A=$ not applicable.
NOTE: Interstates are divided into urban and rural sections based primarily on population size and population density.

## Figure 2-2: New Hampshire Train Accidents (Excludes highway-grade crossing incidents and other incidents)

NOTE FOR DATA ON THIS PAGE: "Accidents/incidents" includes all events reportable to the U.S. Department of Transportation, Federal Railroad Administration under applicable regulations. These include: train accidents, reported on Form F 6180.54, comprised of collisions, derailments, and other events involving the operation of on-track equipment and causing reportable damage above an established threshold ( $\$ 6,600$ in 1998); highway-rail grade crossing incidents, reported on Form F 6180.57, involving impact between railroad on-track equipment and highway users at crossings; and other incidents, reported on Form F 6180.55a, involving all other reportable incidents or exposures that cause a fatality or injury to any person, or an occupational illness to a railroad employee.

SOURCE FOR DATA ON THIS PAGE: U.S. Department of Transportation, Federal Railroad Administration, Railroad Safety Statistics Annual Report 2000, Washington, DC: 2001, table 2-11, available at http://safetydata.fra.dot.gov/officeofsafety/ as of Oct. 22, 2001.

Figure 2-3: New Hampshire Highway-Rail Grade Crossing Fatalities and Injuries

NOTE FOR DATA ON THIS PAGE: Any impact, regardless of severity, between railroad on-track equipment and any user of a public or private crossing site must be reported to the U.S. Department of Transportation, Federal Railroad Administration on Form F 6180.57. The crossing site includes sidewalks and pathways at, or associated with, the crossing. Counts of fatalities and injuries include motor vehicle occupants, people not in vehicles or on the trains, as well as people on the train or railroad equipment.

Figure 2-4: Railroad Trespasser Deaths and Injuries in New Hampshire (Exdudes highway-rail crossing)

NOTE FOR DATA ON THIS PAGE: As defined by the U.S. Department of Transportation, Federal Railroad Administration, a trespasser is any person on a part of railroad property used in railroad operations whose presence is prohibited, forbidden, or unlawful. Employees who are trespassing on railroad property are reported as trespassers.

SOURCE FOR DATA ON THIS PAGE: U.S. Department of Transportation, Federal Railroad Administration, Railroad Safety Statistics Annual Report 2000, Washington, DC: 2001, available at http:// safetydata.fra.dot.gov/ officeofsafety/ as of Oct. 22, 2001.

Table 2-16: Reareational Boating Accidents: 2000

|  | New <br> Hampshire | United States |
| :--- | :---: | :---: |
| Number of accidents |  |  |
| $\quad$ Total | 74 | 7,740 |
| $\quad$ Fatal | 27 | 616 |
| $\quad$ Nonfatal injury | 60 | 3,292 |
| $\quad$ Property damage |  | 3,832 |
| Number of persons | 7 |  |
| $\quad$ Killed | 33 | 701 |
| $\quad$ Injured |  | 4,355 |

NOTE: Guam, Puerto Rico, and the Virgin Islands are included in the U.S. total.

Figure 2-5: New Hampshire Recreational Boating Accidents

NOTES FOR DATA ON THIS PAGE: An accident is listed under one category only, with fatal being the highest priority, followed by nonfatal injury, followed by property damage. For example, if two vessels are in an accident resulting in a fatality and a nonfatal injury, the accident is counted as a fatal accident involving two vessels.

These data do not include: 1) accidents involving only slight injury not requiring medical treatment beyond first-aid; 2) accidents involving property damage of $\$ 500$ or less; 3) accidents not caused or contributed to by a vessel, its equipment, or its appendages; and 4) accidents in which the boat was used solely as a platform for other activities, such as swimming or skin diving. Such cases are not included because the victims freely left the safety of a boat. However, the data do include accidents involving people in the water who are struck by their boat or another boat.

SOURCE FOR DATA ON THIS PAGE: U.S. Department of Transportation, U.S. Coast Guard, Boating Statistics, 2000, Washington, DC: 2001, available at http://www.uscgboating.org/Saf/pdf/Boating_Statistics_2000.pdf as of Nov. 14, 2001.

| $\quad$ Injured | 1 | 476 |  | 4 | 542 |

Figure 2-6: New Hampshire Recreational Boating Accidents Involving Alcohol

NOTE FOR DATA ON THIS PAGE: Alcohol involvement in a boating accident includes any accident in which alcoholic beverages are consumed in the boat and the investigating official has determined that the operator was impaired or affected while operating the boat.

SOURCES FOR DATA ON THIS PAGE: U.S. Department of Transportation, U.S. Coast Guard, Boating Statistics 2000, Washington, DC: 2001; U.S. Department of Transportation, U.S. Coast Guard, Boating Statistics 1999, W ashington, DC: 2000, available at http://www.uscgboating.org/Saf/pdf/Boating_Statistics_2000.pdf and http://www.uscgboating.org/Saf/pdf/Boating_Statistics_1999.pdf as of Nov. 14, 2001.

Table 2-18: Hazardous Materials Incidents: 2000 (Not induding pipelines)

|  |  |  | Injuries |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Incidents | Deaths | Dotal | Major | Minor |  |
| (\$ thousands) |  |  |  |  |  |  |

NOTES: U.S. total includes U.S. territories or foreign locations.
Hazardous material incident locations are often listed as the terminals or sorting centers where they are discovered. Therefore, states with this type of a facility may show a disproportionate number of incidents.
Hazardous materials transportation incidents required to be reported are defined in the Code of Federal Regulations (CFR), 49 CFR Part 171.15, 171.16 (Form F 5800.1), Hazardous materials deaths and injuries are caused by the hazardous material in commerce.

Figure 2-7: New Hampshire Hazardous Materials Incidents (Not including pipelines)

NOTE FOR DATA ON THIS PAGE: Hazardous materials incident data are subject to revision and correction by the O ffice of Hazardous Materials Safety.

SOURCE FOR DATA ON THIS PAGE: U.S. Department of Transportation, Research and Special Programs Administration, Office of Hazardous Materials Safety, Hazmat Summary by State for Calendar Year 2000, and earlier years, Washington, DC: 2002, available at http://hazmat.dot.gov as of Apr. 24, 2002.

Table 2-19: New Hampshire Hazardous Materials Incidents by Mode: 2000 (Not including pipelines)

| Mode | Total incidents | Deaths |  | Injuries |  |
| :--- | :---: | :---: | :---: | :---: | :---: |

KEY: $\mathrm{S}=$ data do not meet publication standards because of high sampling variability or other reasons.
NOTES: The Commodity Flow Survey covers business establishments in mining, manufacturing, wholesale trade, and selected retail industries. The survey also covers selected auxiliary establishments (e.g., warehouses) of in-scope multiunit and retail companies. The survey excludes establishments classified as farms, forestry, fisheries, governments, construction, transportation, foreign establishments, services, and most establishments in retail. Due to industry-wide reporting problems, shipments by oil and gas extraction establishments are also excluded. "From all states" total includes all domestic shipments to the destination state, including intrastate shipments.

Figure 3-2: Truck and Rail Imports from Mexico to New Hampshire by Weight

Figure 3-3: Truck and Rail Imports from Canada to New Hampshire by Weight

NOTES FOR DATA ON THIS PAGE: Data do not include transshipment activity. Transshipments are shipments that enter or exit the United States by way of a U.S. Customs port on the northern or southern border, but whose origin or destination is a country other than Canada or Mexico. All figures are based on the declared gross shipment weight and include packaging. Shipping weight for imports may be underestimated because U.S. Customs Service does not require weight to be reported at the individual commodity level for surface trade.

Table 5-5: Highway, Demographic, and Geographic Characteristics of Urbanized Areas in New Hampshire: 2000

| Federal-aid urbanized area ${ }^{1}$ | Total roadway miles | Total DVMT (thousands) | Estimated population (thousands) | Net land area (square miles) | Persons per square mile | Miles of roadway per person | Total <br> DVMT <br> per capita | Total estimated freeway lane miles $^{2}$ | Average daily traffic per freeway lane mile |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Lawrence-Haverhill | 1,484 | 8,670 | 301 | 205 | 1,468 | 5 | 29 | 306 | 14,017 |
| Lowell | 936 | 5,799 | 223 | 116 | 1,922 | 4 | 26 | 153 | 17,693 |
| N ashua | 497 | 2,223 | 137 | 73 | 1,877 | 4 | 16 | 70 | 10,174 |
| Manchester | 572 | 3,153 | 127 | 65 | 1,954 | 5 | 25 | 123 | 12,204 |
| Portsmouth-Dover-Rochester | 663 | 3,197 | 116 | 203 | 571 | 6 | 28 | 124 | 8,984 |

${ }^{1}$ A "federal-aid urbanized area" is an area with 50,000 or more persons that, at a minimum, encompasses the land area delineated as the urbanized area by the U.S. Census Bureau. Areas are ranked by population. ${ }^{2}$ Lane miles estimated by the Federal Highway Administration (FHWA).

KEY: DVMT = daily vehicle-miles of travel.

${ }^{1}$ An active pilot is a person who holds a pilot certificate and a valid medical certificate issued within the last 25 months.
${ }^{2}$ Includes pilots with an airplane only certificate and those with an airplane and a helicopter and/or glider certificate.
${ }^{3}$ Includes helicopter, glider, and recreational pilots. Does not include pilots holding an airplane certificate. A recreational pilot may fly no more than one passenger in a light, single engine aircraft with no more than four seats during good weather and daylight hours and, unless authorized, no more than 50 miles from the home airport.
${ }^{4} \mathrm{~N}$ ot included in total. A flight instructor must hold a flight instructor certificate in addition to a pilot certificate.
NOTE: Excludes U.S. military personnel holding civilian certificates who are stationed in a foreign country and pilots in U.S. territories.

${ }^{1}$ The transportation and warehousing sector (North American Industrial Classification System [N AICS] 48
and 49) includes industries providing transportation of passengers and cargo, warehousing and storage
for goods, scenic and sightseeing transportation, and support activities related to modes of
transportation. Establishments in these industries use transportation equipment or transportation related
facilities as a productive asset. The type of equipment depends on the mode of transportation. The
modes of transportation comprise air, rail, water, road, and pipeline.

${ }^{1}$ Includes supplemental gaseous fuels. Transportation use of natural gas is consumed in the operation of pipelines, primarily in compressors, or consumed as vehicle fuel.
${ }^{2}$ Includes ethanol blended into motor gasoline.
${ }^{3}$ "O ther" is the sum of aviation gasoline, liquefied petroleum gas (LPG), and lubricants.
${ }^{4}$ Ethanol blended into motor gasoline is included in motor gasoline, but is also shown separately to display the use of renewable energy by the transportation sector. It is counted only once in the total.
${ }^{5}$ Incurred in the generation, transmission, and distribution of electricity plus plant use and unaccounted for electrical system energy losses.
KEY: Btu = British thermal unit; $\mathrm{S}=$ less than 0.05 trillion Btu.
NOTE: Totals may not equal sum of components due to rounding.

| Total | 661 | 128,884 | 17 | 2,972 | 99 | 33,377 | 777 | 165,232 |

${ }^{1}$ Based on reports from state motor-fuel tax agencies. Gasohol is included with gasoline. Public use and nonhighway use were
estimated by the Federal Highway Administration.
KEY: $\mathrm{N}=$ data do not exist.
NOTE: The term "motor fuel" applies to gasoline and all other fuels, including special fuels, coming under the purview of the state motor-fuel tax laws. "Special fuels" include diesel fuel and, to the extent they can be quantified, liquefied petroleum gases such as propane. Gasohol, a blend of gasoline and fuel alcohol, is included with gasoline.

## H Information on Data Sources

## Airline freight and passenger data

The U.S. Department of Transportation's (USDOT) Bureau of Transportation Statistics (BTS) collects and compiles data on the volume of revenue passengers, freight, and mail traffic handled and reported by the nation's large certificated air carriers. These carriers hold Certificates of Public Convenience and Necessity (CPN) issued by the USDOT authorizing the performance of air transportation. Large certificated air carriers operate aircraft with seating capacity of more than 60 seats or a maximum payload capacity of more than 18,000 pounds or conduct international operations. Data for commuters, intrastate, nonscheduled air taxi operators, and foreign flag air carriers are not included in this BTS data.

Print source: USDOT, Bureau of Transportation Statistics, Office of Airline Information. Airport Activity Statistics. Washington, DC: Annual issues.

Internet: http://www.bts.gov

## Commodity Flow Survey

The Commodity Flow Survey (CFS) provides data on the movement of freight by type of commodity shipped and by mode of transport. In 1997, 100,000 domestic establishments were randomly selected from a universe of approximately 800,000 engaged in mining, manufacturing, wholesale, warehouses of multi-establishment companies, and some selected activities in retail and service. The survey excluded establishments classified as farms, forestry, fisheries, governments, construction, transportation, foreign establishments, services, and most
establishments in retail. For the 1997 CFS, each selected establishment reported a sample of about 25 outbound shipments for a oneweek period in each of four calendar quarters in 1997. This produced a total sample of over 5 million shipments. Due to industry-wide reporting problems, shipments by oil and gas extraction establishments were excluded from data tabulations.

For each sampled 1997 CFS shipment, zip code of origin and destination, 5-digit Standard Classification of Transported Goods (SCTG) code, weight, value, and modes of transport were provided. Information on whether the shipment was containerized, a hazardous material, or an export was also obtained. Route-distance for each mode, for each shipment, is imputed from a ModeDistance Table developed by Oak Ridge National Laboratory. Distance was used to compute ton-mileage by mode of transport. The CFS provides nationwide geographic coverage in 89 National Transportation Analysis Regions, stratified by state and, for the 1997 CFS, metropolitan area.

Transportation Statistics and U.S. Department of Commerce, Bureau of the Census, [State]: 1997 Commodity Flow Survey. EC97TCF-CA, Washington, DC: 1999.

Internet: http://www.bts.gov/ntda/cfs/

## Commuting data

Commuting data are derived from the Census 2000 Supplementary Survey (C2SS). The C2SS used the questionnaire and methods developed for the American Community Survey to collect demographic, social,
economic, and housing data from a national sample of 700,000 households. Group quarters were not included in the sample. The C2SS was conducted in 1,203 counties with monthly samples of about 58,000 housing units. Economic, demographic, and housing characteristics from the Census 2000 Supplementary Survey are reported for the United States as a whole, the 50 states, and the District of Columbia.

The Census 2000 Supplementary Survey is not directly comparable with the 1990 Census for several reasons, one being that the former did not include group quarters. This may understate some categories such as walking.

## G as and hazardous liquid pipeline data

U.S. fatality and injury data for natural gas pipelines and hazardous liquid pipelines are based on reports filed with the U.S. Department of Transportation, Office of Pipeline Safety (OPS) under 49 CFR 191. Accidents must be reported as soon as possible, but no later than 30 days after discovery. Undetected releases are a possible source of error; even if subsequently detected and reported, it may not be possible to accurately reconstruct the accident. Property damage figures are estimates.

Gas pipeline incidents involve: 1) releases of gas from a pipeline or liquefied natural gas (LNG) or gas from an LNG facility that results in a) death or personal injury necessitating inpatient hospitalization, or b) estimated property damage, including cost of gas lost, of the operator or others, or both, of $\$ 50,000$ or more; 2) an event that results in an emergency
shutdown of an LNG facility; or 3) an event that is significant, in the judgment of the operator, even though it did not meet the criteria of 1) or 2 ).

For hazardous liquids pipelines, an accident report is required for each failure in a pipeline system in which there is a release of the hazardous liquid or carbon dioxide transported resulting in any of the following: 1) explosion or fire not intentionally set by the operator; 2) loss of 50 or more barrels ( 8 or more cubic meters) of hazardous liquid or carbon dioxide; 3) escape to the atmosphere of more than 5 barrels ( 0.8 cubic meters) a day of highly volatile liquids; 4) death of any person; 5) bodily harm to any person resulting in one or more of the following: a) loss of consciousness, b) an individual being carried from the scene, c) medical treatment, or d) disability which prevents the discharge of normal duties or the pursuit of normal activities beyond the day of the accident; or 6) estimated property damage, including cost of clean-up and recovery, value of lost product, and damage to the property of the operator or others, or both, exceeding $\$ 50,000$.

## G overnment transportation revenue and expenditure data

The U.S. Department of Commerce (USDOC), U.S. Census Bureau conducts an Annual Survey of Government Finances. Alternatively, every five years, in years ending in a ' 2 ' or ' 7 ', a Census of Governments, including a finance portion, is conducted. The survey coverage includes all state and local governments in the United States. For both the

Census and annual survey, the finance detail data is equivalent, encompassing the entire range of government finance activitiesrevenue, expenditure, debt, and assets.

The data collection for the annual survey uses two methods: mail canvas and central collection from state sources. Data for local governments includes county, municipal, township, special district, and school district data. Data for state governments are compiled from state government audits, budgets, and other financial reports into the classification categories used for reporting by the Census Bureau.

Reporting of government finances by the Census Bureau involves presentation of data in terms of uniform categories. While often similar to, or identical to, the classification used by the state or local government, there could be instances in which a significant difference exists between the name of a state or local financial item and the final category to which it is assigned by the Census Bureau.

Like financial transactions are combined. The financial categories for revenue involve grouping of items by source. Revenue items of the same kind are merged. Financial transactions for expenditures are classified both by function and by object category. Debt items are classified by term (short- and longterm), as well as by type of debt and, to a limited extent, by purpose. Assets also are put into uniform categories, grouped by type of holding, with holdings for insurance trust systems grouped separately from general government.

The share of government sector financial totals contributed by a state government or by local governments differs materially from one state to another. Users can review the Government Finance and Employment

Classification Manual for additional information regarding the financial categories. The financial amounts in the tables and files are statistical in nature and do not represent accounting statements or conditions.

The local government statistics are developed from a sample survey. Therefore, the local totals, as well as state and local aggregates, are considered estimated amounts subject to sampling error. State government finance data are not subject to sampling. Consequently, state-local aggregates for individual states are more reliable (on a relative standard error basis) than the local government estimates they include.

## Hazardous materials incidents data

Incidents resulting in certain unintentional releases of hazardous materials must be reported under 49 CFR 171.16. Each carrier must submit a report to the USDOT, Research and Special Programs Administration (RSPA) within 30 days of the incident, including information on the mode of transportation involved, results of the incident, and a narrative description of the accident. These reports are generally made available on RSPA's incident database within 90 days of receipt.

Fatalities and injuries are counted only if directly caused by a hazardous material. For example, a truck operator killed by impact forces during a motor vehicle crash would not be counted as a hazardous-material fatality.

RSPA contacts the submitting carrier by telephone to verify all reported fatalities.

Although RSPA acknowledges that there is some level of underreporting, it believes that the underreporting is mostly limited to small, nonserious incidents. The reporting requirements were extended to intrastate highway carriers on October 1, 1998, and the response rate from this new group is expected to increase over time. Property damage figures are estimates determined by the carrier prior to the 30-day reporting deadline, and are generally not subsequently updated. Property damage figures, therefore, may underestimate actual damages.

Contact: USDOT, Research and Special Programs Administration, Office of Hazardous Materials Planning and Analysis

Print source: USDOT, Research and Special Programs Administration, Office of Hazardous Materials Safety, Hazmat Summary by State for Calendar Year 2000. Washington, DC: 2001

Internet: http://hazmat.dot.gov
Highway mileage, condition, and use, driver licenses, and highway vehicle registrations data
Data on roadway mileage, condition, and use are extracted from the Highway Performance Monitoring System (HPMS), which uses a stratified simple random sample of highway links (small sections of roadway) selected from state inventory files. The HPMS sample was designed as a fixed sample to minimize data collection costs, but adjustments to maintain representativeness are carried out periodically. The HPMS also consists of universe reporting (a complete census) for the Interstate and the National Highway System,
and tabular summary reporting of limited information.

Data are collected independently by the 50 states, Metropolitan Planning Organizations (MPOs), and lower jurisdictions. Many of the geometric data items rarely change, such as number of lanes; others change frequently, such as traffic. The U.S. Department of Transportation, Federal Highway Administration (FHWA) provides guidelines for data collection in the HPMS Field Manual, which the states follow to varying extents depending on matters such as staff, resources, state perspective, uses of the data, and state/MPO/local needs for the data. State Departments of Transportation (DOTs) report HPMS data annually to the FHWA.

HPMS data are subject to sampling and nonsampling error. Nonsampling error is the major concern with these data. For some of the most variable and important data items, such as traffic, guidelines for measurement and data collection have been produced. States have the option of using the guidelines or using their own procedures. Many data items are difficult and costly to collect and are reported as estimates not based on direct measurement. The data are collected and reported by many entities and individuals within the responsible organizations. Most do a reasonably good job, but staff turnover, cost, equipment issues, etc., can create difficulties.

States provide vehicle registration data to the FHWA. Vehicle registration data are shown on a calendar-year basis. Efforts are made to exclude transfers, re-registrations, and any other factors that could result in duplication in the vehicle counts. Registration practices for commercial vehicles differ greatly among the states. Some states register a tractorsemitrailer combination as a single unit; others register the tractor and the semitrailer
separately. Some states register buses with trucks or automobiles, while many states do not report house and light utility trailers separately from commercial trailers or semitrailers. Some states do not require registration of car or light utility trailers. In some instances, FHWA has supplemented the data supplied by the states with information obtained from other sources.

States also provide driver licensing data to the FHWA. Although efforts are made to minimize license duplication, drivers who move from one state to another are sometimes counted in both states until the license from the previous state of residence expires. Problems with the data also arise from the fact that: 1) some individuals obtain their drivers licenses in states other than those of legal residence; 2) some individuals fraudulently obtain multiple licenses; 3) not all individuals who drive are licensed; and 4) the purging of expired licenses or licenses from deceased individuals is not performed on a continual basis.

## Highway safety data

Fatalities: Highway fatality data are extracted from the Fatality Analysis Reporting System (FARS), which is compiled by the U.S.

Department of Transportation (USDOT), National Highway Traffic Safety Administration (NHTSA). Data are gathered from a census of police accident reports (PARs), state vehicle registration files, state drivers licensing files, state highway department data, vital statistics, death certificates, coroner/medical examiner reports, hospital medical reports, and emergency medical service reports. A separate form is completed for each fatal crash. Blood alcohol concentration (BAC) is estimated when not known. Statistical procedures used for unknown data in FARS can be found in the NHTSA report, A Method for Estimating Posterior BAC Distributions for Persons Involved in Fatal Traffic Accidents, DOT HS 807094 (Washington, DC: July 1986).

Data are collected from relevant state agencies and electronically submitted for inclusion in the FARs database on a continuous basis. Cross-verification of PARs with death certificates helps prevent undercounting. Moreover, when data are entered, they are checked automatically for acceptable range values and consistency, enabling quick corrections when necessary. Several programs continually monitor the data for completeness and accuracy. Periodically, sample cases are analyzed for accuracy and consistency.

FARS data do not include motor vehicle fatalities on nonpublic roads. These are thought to account for about 2 percent or fewer of the total motor vehicle fatalities per year.

Injuries and crashes: NHTSA's General Estimates System (GES) data are a nationally representative sample of police-reported crashes that contributed to an injury or fatality or resulted in property damage and involved at least one motor vehicle traveling on a trafficway. GES data collectors randomly
sample PARs and forward copies to a central contractor for coding into a standard GES system format. Documents such as police diagrams or supporting text provided by the officers might be further reviewed to complete a data entry. A NHTSA study of injuries from motor vehicle crashes estimated the total count of nonfatal injuries at over 5 million compared with the GES's estimate of 3.2 million in 1998.

## International visitors data

Data on international visitors to the United States are based on international arrivals by air to the United States (excluding those from Canada and Mexico). Information is derived from the Immigration and Naturalization Service's (INS) Visitor Arrivals Program (I94) and the U.S. Department of Commerce, Tourism Industries Office's Survey of International Air Travelers. The survey obtains data on overseas travel patterns, characteristics, and spending patterns of international travelers to and from the United States. Between 69,000 and 95,000 travelers are surveyed each year. The survey results are weighted so they represent the international travel populations of U.S. residents and nonresidents based upon Immigration and Naturalization Service data.

## Passenger border crossing data

U.S. Custom Service personnel collect passenger border-crossing entry data for all U.S. land, air, and maritime ports. These numbers reflect all entries, and it is not possible to divide these data into separate entries for same-day and overnight travel or by country of residence for the traveler. Additionally, for border-crossing figures, the total number of people is not the number of unique individuals, but rather indicates the number of border crossings. Multiple crossings by the same individual count as multiple border crossings.

Internet: http://www.bts.gov

## Railroad industry and shipments data

The Association of American Railroads (AAR) database aggregates data from several sources concerning the freight railroad industry and movement of freight, both nationally and statewide. The state-specific
data include commerce, employment, and financial contributions.

The primary source of data for Class I railroads is Schedule 700 of the R-1 Annual Report to the Surface Transportation Board (STB) by individual carriers ( 100 percent reporting) and the 2000 Carload Waybill Sample. The primary source of data for nonClass I railroads is AAR's Profiles of U.S. Railroads from statistics supplied annually by nearly all operating U.S. freight railroads. Some of the data are estimated based on more aggregated, national figures.

The STB defines Class I railroads as having operating revenues at or above a threshold indexed to a base of $\$ 250$ million (1991) and adjusted annually in concert with changes in the Railroad Freight Rate Index published by the Bureau of Labor Statistics.
Declassification from Class I status occurs when a railroad falls below the applicable threshold for three consecutive years. Although few in number, Class I railroads account for over 90 percent of the industry's revenue.

The AAR determines the number of non-Class I railroads through an annual survey sent to each U.S. freight railroad.

Historical reliability may vary due to changes in the railroad industry, including bankruptcies, mergers, and declassification by the STB. Small data errors may also have occurred because of independent rounding in this series by the AAR.

## Additional information:

Contact: Association of American Railroads, Policy and Economics Department

Internet: http://www.aar.org

## Railroad safety data

Railroads are required to file a report for each accident or incident to the Federal Railroad Administration (FRA). These include: 1) train accidents, reported on Form F 6180.54, comprised of collisions, derailments, and other events involving the operation of on-track equipment and causing reportable damage above an established threshold (\$6,600 in 1998); 2) highway-rail grade crossing incidents, reported on Form F 6180.57, involving impact between railroad on-track equipment and highway users at crossings; and 3) other incidents, reported on Form F 6180.55 a , involving all other reportable incidents or exposures that cause a fatality or injury to any person or an occupational illness to a railroad employee.

Railroads are required by FRA regulations to use the current FRA Guide for Preparing Accident/Incident Reports when preparing reports.

The Systems Support Division of FRA maintains the Railroad Accident/Incident Reporting System (RAIRS), consisting of four databases: rail equipment, injury/illness, grade-crossing accidents, and railroad summary (freight and passenger). These databases include information on all railroad accidents, grade-crossing accidents, railroad employee casualties, and any other injuries on railroad property, and provide the basis for accident analyses and assessment as well as annual reports. The databases are updated monthly from information submitted by the railroads.

## Recreational boating safety and vehicles data

The U.S. Coast Guard, of the U.S. Department of Transportation, collects data on recreational boating accidents from two sources: 1)
Boating Accident Report (BAR) data forwarded to the Coast Guard by jurisdictions with an approved boat numbering and casualty reporting system, and 2) reports of Coast Guard investigations of fatal boating accidents that occurred on waters under federal jurisdiction. Recreational Boating Accident Investigation data are used if submitted to the Coast Guard and are relied on as much as possible to provide accident statistics. In the absence of investigations, information is collected from reports filed by boat operators.

Boat operators are required to file a BAR if an accident results in 1) loss of life, 2) personal injury that requires medical treatment beyond first aid, 3) damage to the vessel and other property exceeding $\$ 500$, or 4 ) complete loss of the vessel.

Boat operators are required to report their accidents to authorities in the state where the accident occurred. States with approved boat numbering systems furnish the Coast Guard with BAR data. The minimum reporting requirements are set by federal regulation, but states are allowed to have stricter requirements. The Coast Guard reports recreational boating safety data in the report Boating Statistics, which only covers accidents meeting the federal minimum reporting requirements.

The statistics in Boating Statistics cover boating accidents reported on waters of joint federal and state jurisdiction, and exclusive state jurisdiction.

The Coast Guard believes over 90 percent of fatal accidents are included in Boating Statistics. A smaller percentage of nonfatal accidents are reported because of reporting thresholds, ignorance of the law, and difficulties enforcing the law. Federal law does not require the reporting of accidents on private waters where states have no jurisdiction. Reports of accidents on such waters are included when received by the Coast Guard if they satisfy the other requirements of inclusion. Accidents excluded are those in which the boat was used as a platform for other activities (e.g., swimming), and those in which a person dies of natural causes aboard a boat. However, the data do include accidents involving people in the water who are struck by their boat or another boat.

## Transborder surface freight data

The Transborder Surface Freight Dataset is extracted from the Census Foreign Trade Statistics Program and made available by the Bureau of Transportation Statistics. Import and export data are extracted from administrative records required by the Departments of Commerce and Treasury. This dataset incorporates all shipments entering or exiting the United States by surface modes of transport (that is, other than air or maritime vessel) to and from Canada or Mexico. Prior to January 1997, this dataset also included transhipments in its detailed tables, that is,
shipments entering or exiting the United States by way of U.S. Customs ports on the northern or southern borders, even when the actual origin or final destination of the goods was other than Canada or Mexico. Shipments that neither originate nor terminate in the United States (i.e., intransit shipments) are beyond the scope of this dataset because they are not considered U.S. international trade shipments.

Users should be aware that the trade data fields (such as value and commodity classification) are typically more rigorously reviewed than transportation data fields (i.e., mode of transportation and port of entry/exit). Users should also be aware that the use of foreign trade data to describe physical transportation flows might not be direct. For example, this dataset provides surface transportation information for individual Customs districts and ports on the northern and southern borders. However, because of filing procedures for trade documents, these ports may or may not reflect where goods physically crossed the border. This is because the filer of information may choose to file trade documents at one port, while shipments actually enter or exit at another port.

Import data are generally more accurate than export data. This is primarily due to the fact that Customs uses import documents for enforcement purposes, while it performs no similar function for exports.

Internet: http://www.bts.gov

## Transit operating, financial, and safety data

Transit data are from the National Transit Database (NTD) produced by the USDOT, Federal Transit Administration (FTA). Data are collected from transit agencies that receive Urbanized Area Formula Program funds. Transit operators that do not report to FTA are those that do not receive federal funding, typically private, small, and rural operators. FTA reviews and validates information submitted by individual transit agencies. Reliability may vary because some transit agencies cannot obtain accurate information or may interpret certain data definitions differently than intended.

In 2000, 592 agencies reported to the NTD. Of that total, 67 transit agencies received exemptions from detailed reporting because they operated 9 or fewer vehicles, and 7 were excluded because their data were incomplete. Thus, 518 individual reporters were included in the NTD accounting for 90 to 95 percent of transit passenger-miles.

Data are collected on a range of variables including capital and operating funding, transit service supplied and consumed, and transit safety and security. Transit operators must report fatalities, injuries, accidents, incidents, and property damage in excess of $\$ 1,000$.

## Transportation establishment, employees, and payroll data

Data on employees, establishments, and payroll are taken from County Business Patterns, a database of employment in the United States using the North American Industry Classification System (NAICS). Data are collected annually. Data are extracted from the Business Register, the Census Bureau's file of all known single and multiestablishment companies. The Annual Company Organization Survey and quinquennial Economic Censuses provide individual establishment data for multilocation firms. Data for single-location firms are obtained from various programs conducted by the Census Bureau, such as the Economic Censuses, the Annual Survey of Manufactures, and Current Business Surveys. They are also obtained from administrative records of the Internal Revenue Service (IRS), the Social Security Administration (SSA), and the Bureau of Labor Statistics (BLS).

Internet: http://www.census.gov/epcd/ cbp/view/cbpview.html

## Vehicle Inventory and Use Survey

The Vehicle Inventory and Use Survey (VIUS) collects data on the physical and
operational characteristics of private and commercial trucks in the United States. The 1997 VIUS sampled about 131,000 trucks from an estimated universe of over 75 million trucks. The sample excludes vehicles owned by federal, state, and local government including ambulances, buses, motor homes, farm tractors, unpowered trailer units, and trucks reported to have been sold, junked, or wrecked prior to July 1, 1996. Light trucks registered as cars, as is the practice in many states, were included. Unregistered trucks used off-road are not included. Census delivered a mail-out/mail-back survey to the owner identified in the vehicle registration records. Data collection is staggered as state records become available. Owners report data only for the vehicles selected. The response rate for the 1997 VIUS was about 85 percent.

## Waterborne imports and vessel data

The U.S. Department of Transportation's Maritime Administration (MARAD) classifies merchant-based vessels by size and type and reports this information in its annual publication, Merchant Fleets of the World. MARAD compiles these figures from a data service provided by Lloyd's Maritime Information Service. The parent company, Lloyd's Register (LR), collects data from several sources, including its offices around the world, data transfers and agreements with other classification societies, questionnaires to
ship owners and shipbuilders, feedback from government agencies, and input from port agents.

MARAD's Office of Statistical and Economic Analysis maintains the waterborne databank used to compile the annual import and export statistics from monthly and quarterly data provided by the U.S. Army Corps of Engineers. MARAD publishes the data in reports of vessel movements, trade and cargo by type of service, U.S. and foreign port, country of origin/destination, commodity, value, weight, and containerized cargo.

MARAD distributes the reports and performs special tabulations and customized maritime data reports created for other government agencies and the private sector on a reimbursable basis. MARAD also provides these services for historic data and maintains the Schedule K Classification of Foreign Ports by Geographic Trade Area and Country.

## Additional information:

Contact: USDOT, Maritime Administration, Office of Statistical and Economic Analysis

Print source: USDOT, Maritime Administration, Merchant Fleets of the World.

Internet: http://www.marad.dot.gov

## Waterborne shipments data

The U.S. Army Corps of Engineers' (Corps) Navigation Data Center (NDC) collects data on waterborne commodity and vessel movements, domestic commercial vessel characteristics, port and waterway facilities, and navigation dredging projects.

The NDC's databases contain information on physical characteristics, infrastructure, and commodities for principal facilities on the U.S. coast, Great Lakes, and inland ports. The data consists of listings of port area's
waterfront facilities, including information on berthing, cranes, transit sheds, grain elevators, marine repair plants, fleeting areas, and docking and storage facilities.

All vessel operators of record report their domestic waterborne traffic movements to the Corps via ENG Forms 3925 and 3925b. Cargo movements are reported according to points of loading and unloading. Excluded cargo movements are: 1) cargo carried on general ferries, 2) coal and petroleum products loaded from shore facilities directly into vessels for fuel use, 3) military cargo moved in U.S. Department of Defense vessels, and 4) cargo weighing less than 100 tons moved on government equipment. The Corps calculates ton-miles by multiplying the cargo's tonnage by the distance between points of loading and unloading.

An annual survey of companies that operate inland waterway vessels is the principal source of data for inland non self-propelled vessels, self-propelled vessels, and flag passenger and cargo vessels. More than 3,000 surveys are sent to these companies, and response rates are typically above 90 percent.

## I Glossary

British thermal unit (Btu): The amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit (F) at or near 39.2 degrees $F$ and 1 atmosphere of pressure.

Certificated airport: An airport holding an operating certificate issued by the Federal Aviation Administration in accordance with Code of Federal Regulations (CFR) Title 14, Chapter 1, Part 139 allowing it to serve scheduled or unscheduled air carrier aircraft designed for more than 30 passengers.

Commuter rail: Urban passenger train service for short-distance travel between a central city and adjacent suburb. Does not include rapid rail transit or light rail transit service.

Container: A box-like device used to store, protect, and handle a number of packages or items as a unit of transit that can be interchanged between trucks, trains, and ships without rehandling the contents.

Controlled right-of-way: Lanes restricted for at least a portion of the day for use by transit vehicles and other high occupancy vehicles (HOVs).

Demand responsive: Transit service provided without a fixed route and without a fixed schedule that operates in response to calls from passengers or their agents to the transit operator or dispatcher. Service is usually provided using cars, vans, or buses with fewer than 25 seats.

Directional route-miles: The mileage in each direction over which public transportation vehicles travel while in revenue service. Directional route-miles are a measure of the facility or roadway, not the service carried on the facility such as the number of routes or vehicle-miles.

Directional route-miles are computed with regard to direction of service, but without regard to the number of traffic lanes or rail tracks existing in the right-of-way.

Dry-bulk carrier (water): A ship with specialized holds for carrying dry cargo such as coal, grain, and iron ore in unpackaged bulk form.

Enplanements: The total number of revenue passengers boarding aircraft.

Exclusive right-of-way: Lanes reserved at all times for transit use and other high occupancy vehicles (HOVs).

Ferryboat (transit): Vessels that carry passengers and/or vehicles over a body of water. Generally steam or diesel-powered, ferryboats may also be hovercraft, hydrofoil, and other high-speed vessels. The vessel is limited in its use to the carriage of deck passengers or vehicles or both, operates on a short run on a frequent schedule between two points over the most direct water routes other than in ocean or coastwise service, and is offered as a public service of a type normally attributed to a bridge or tunnel.

Full container ship: Ships equipped with permanent container cells, with little or no space for other types of cargo.

Heavy rail: An electric railway with the capacity to transport a heavy volume of passenger traffic and characterized by exclusive rights-of-way, multi-car trains, high speed, rapid acceleration, sophisticated signaling, and high-platform loading. Also known as "subway," "elevated (railway)," or metropolitan railway (metro)."

Light rail: A streetcar-type vehicle operated on city streets, semi-exclusive rights-of-way, or exclusive rights-of-way.

Service may be provided by step-entry vehicles or by level boarding.

Major arterial highway: A major highway used primarily for through traffic.

Metric ton: 1,814 pounds ( 2,000 pounds multiplied by 0.907 ).

Minor arterial: In rural areas, roads linking cities and larger towns. In urban areas, roads distributing trips to small geographic area but not penetrating identifiable neighborhoods.

Minor collector highway: In rural areas, routes that serve intracounty rather than statewide travel. In urban areas, streets that provide direct access to neighborhoods and arterials.

Mixed right-of-way: Lanes used for general automobile traffic.

Motor bus: A rubber-tired, self-propelled, manually steered bus with fuel supply onboard the vehicle. Motor bus types include intercity, school, and transit.

Natural gas distribution pipeline: Smaller than transmission pipelines and maintained by companies that distribute natural gas locally (intrastate). Distribution pipeline systems are analogous to networks of lesser roads and residential streets that people travel after getting off the freeway.

## Natural gas transmission pipeline:

Analogous to a major freeway, it is the main interstate transportation route for moving large amounts of natural gas from the source of production to points of distribution.
Transmission pipelines are designed to move large amounts of natural gas from areas where the gas is extracted and stored
to the local distribution companies that provide natural gas to homes and businesses.

Principal arterial highway: Major streets or highways, many of multilane or freeway design, serving high-volume traffic corridor movements that connect major generators of travel.

Short ton: 2,000 pounds.
Tanker: An oceangoing ship designed to haul liquid bulk cargo in world trade.

Ton-mile: The movement of one ton of cargo the distance of one statute mile.

Trackage rights: The authority of one railroad to use the tracks of another railroad for a fee.

Trolley bus: Rubber-tired, electric transit vehicle, manually steered and propelled by a motor drawing current, normally through overhead wires, from a central power source.

Unlinked passenger trips: The number of passengers who board public transportation vehicles. A passenger is counted each time he or she boards a vehicle even if on the same journey from origin to destination.

Vanpool: Public-sponsored commuter service operating under prearranged schedules for previously formed groups of riders in 8 - to 18 -seat vehicles. Drivers are also commuters who receive little or no compensation besides the free ride.

Vehicle-miles traveled (highway): Miles of travel by all types of motor vehicles as determined by the states on the basis of actual traffic counts and established estimating procedures.

## Legend

[^0]:    ${ }^{1}$ The completeness of data on trailer registrations varies greatly among states. Data are reported to the extent available and, in some cases, are supplemented by estimates of the Federal Highway Administration.
    ${ }^{2}$ This row includes all commercial type vehicles and semi-trailers that are in private or for-hire use.
    ${ }^{3}$ Several states do not require the registration of light farm or automobile trailers.
    NOTE: Mobile homes and house trailers are shown for states that require registration and are able to segregate them from other trailers. In states where this classification is not available, house trailers are included with light car trailers.

    SOURCE: U.S. Department of Transportation, Federal Highway Administration, Highway Statistics 2000, Washington, DC: 2001, table MV-11.
