INTRODUCTION

The seventh in a series of bottom trawl surveys of the Gulf of Alaska groundfish and invertebrate resources was completed during the summer of 2001 by the Resource Assessment and Conservation Engineering (RACE) Division, Alaska Fisheries Science Center (AFSC), National Marine Fisheries Service (NMFS). The design of the 2001 biennial groundfish survey closely followed that used for prior GOA surveys conducted in 1984, 1987, 1990, 1993, 1996, and 1999. The purpose of the surveys is to describe and monitor the distribution, abundance, and biological condition of the important groundfish stocks.

Historically, the Gulf of Alaska has been an important fishing grounds for a variety of groundfish species including Pacific ocean perch (*Sebastes alutus*), walleye pollock (*Theragra chalocogramma*), Pacific cod (*Gadus macrocephalus*), Pacific halibut (*Hippoglossus stenolepis*), sablefish (*Anoplopoma fimbria*), rockfishes (*Sebastes* spp.), arrowtooth flounder (*Atheresthes stomias*), lingcod (*Ophiodon elongatus*), Pacific herring (*Clupea pallasii*) and several invertebrate groups including crabs, scallops, and squid.

The Gulf of Alaska forms the northeastern border of the Pacific Ocean and is comprised of complex bathymetric features ranging from jagged, mountainous pinnacles to muddy gullies. The features provide a wide variety of habitats resulting in a complex ecosystem. The rugged bathymetry prevalent in many areas requires the use of a roller gear footrope for all bottom trawling operations. Unlike prior surveys, which included the entire Gulf of Alaska continental shelf, the 2001 survey was shortened for budgetary reasons. Rather than survey the entire shelf from the Islands of Four Mountains to Dixon Entrance like previous years, the 2001 survey went from the Islands of Four Mountains to the east end of Prince William Sound. Also, the shelf was surveyed only to a depth of 500 m rather than 1,000 m as had been done in 1999. The total area survey in 2001 was approximately 220,569 km².

METHODS

The survey was conducted in four legs totaling 70 days aboard each of two chartered commercial trawlers, the F/V *Morning Star* and F/V *Vesteraalen*, from 17 May to 25 July 2001. Sampling began in the area of the Islands of Four Mountains (170° W long.) and continued eastward across the Gulf of Alaska to Montague Island (147° W long.).

VESSELS AND GEAR CHARACTERISTICS

Both chartered vessels are house-forward stern trawlers with hydraulic net reels and paired constant tension hydraulic trawl winches with 2.54 cm diameter steel cable 1,000 to 1,200 m in length. Both vessels have articulating hydraulic cranes for handling catches and gear. Each vessel has a single main diesel engine with a single nozzleled propeller. The F/V *Vesteraalen* is 38 m long (LOA) with a main engine developing 1,725 continuous HP. The F/V *Morning Star* is 45 m long (LOA) with a 1,710 HP main engine. Both vessels are equipped with global positioning systems (GPS) integrated with radar, computerized plotting, and autopilots. Other essential electronics supplied by the vessels include color video fish finders, recording depth profilers, and trawl warp measuring systems. NMFS-supplied GPS receivers recorded trawling position, time, and trackline position.

Standard methods as documented in Appendix 1 of “NOAA Protocols for Groundfish Bottom Trawl Surveys of the Nation’s Fishery Resources” (Stauffer 2004) were used for this survey. The standard Poly-Nor’Eastern trawl with roller gear was used exclusively by both vessels to trawl the 490 assigned survey stations. The headrope is made of galvanized wire rope and is 27.2 m long with twenty-one 30-cm diameter plastic floats. The footrope is constructed of the same material and is 24.2 m long with sixteen 35.6-cm diameter rubber wing bobbins. The net was spread with 1.8×2.7 m steel V-doors weighing approximately 800 kg each.

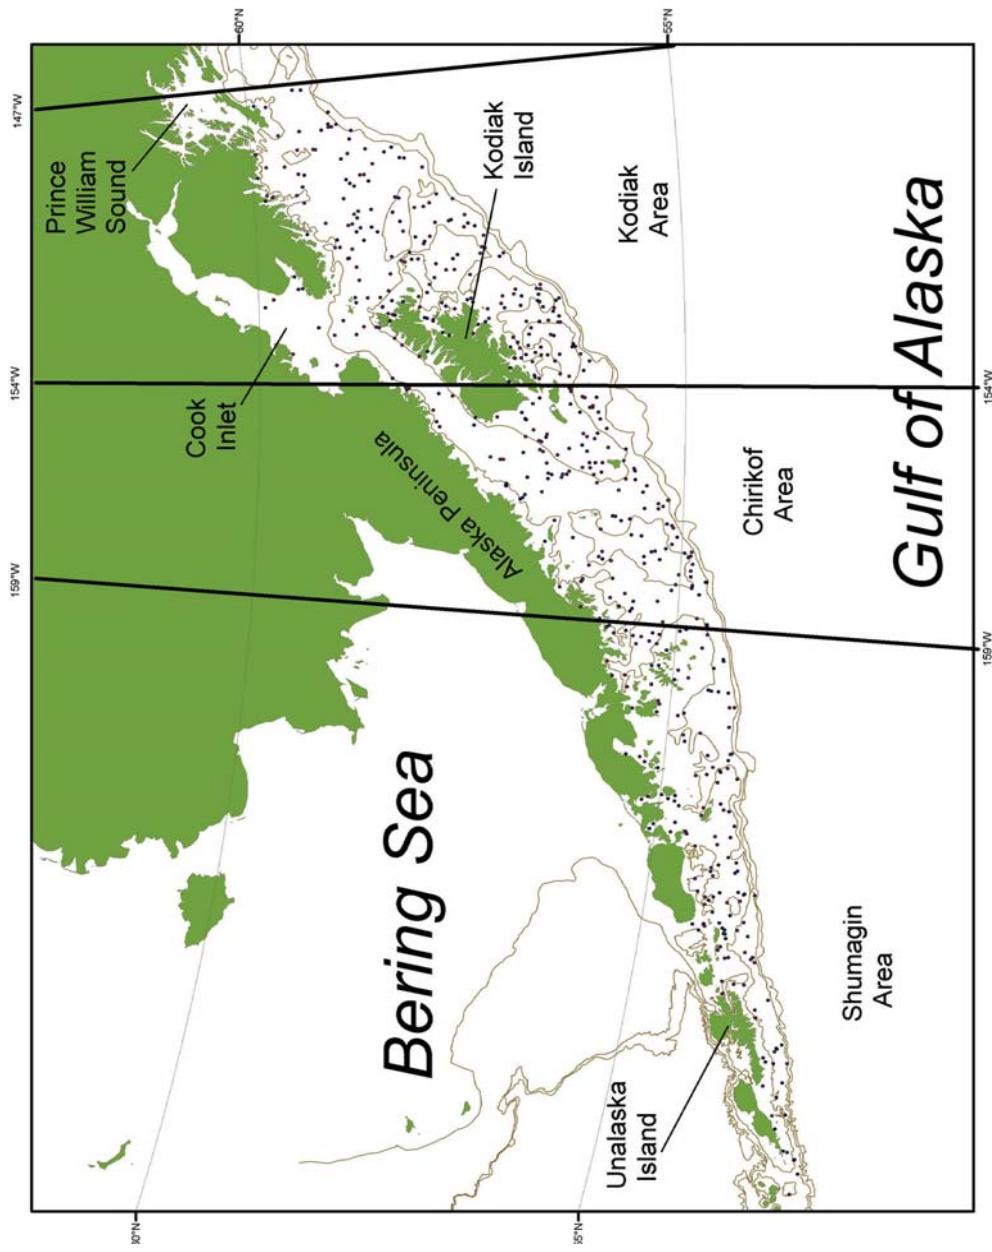

Figure 1.-- Survey stations attempted during the 2001 NMFS biennial Gulf of Alaska bottom trawl survey. Meridians shown define INPFC Management Area boundaries.

A SCANMAR net mensuration system measured net width (wingtip-to-wingtip) and headrope height and communicated these measurements acoustically to a recording computer in real time. After the haul was completed, data from a footrope-mounted bottom contact sensor developed by the RACE Division was used to determine the actual time on bottom for the trawl. Depth of each tow was measured and monitored with a bathythermograph mounted on the headrope of the net.

SURVEY DESIGN AND OPERATIONS

The 2001 survey design employed a stratified random sampling design consistent with previous surveys. The Gulf of Alaska was divided into 32 strata categorized by depth interval, type of geographical area (e.g., banks, gullies, and slopes) and International North Pacific Fisheries Commission (INPFC) statistical area boundaries (Fig. 1). Depth intervals were defined as less than 100, 101-200, 201-300 and 301-500 m. Within each stratum the sampling density was assigned based on expected catch rate variances and ex-vessel value for selected species from past surveys, with an imposed minimum of three samples per stratum. After the number of stations was allocated to each stratum, station grid cells were chosen randomly from a 5×5 km grid laid over the survey area.

During survey operations, the first trawlable location encountered in the assigned grid cell was sampled. In choosing the exact location, only the trawlability of the bottom, as indicated by the echo sounder, was considered and not the presence or absence of fish sign. The target tow duration on the sea bottom was 15 minutes. In cases where there was not enough trawlable bottom for a full 15 minute tow, shorter tows were completed. Attempts were made to maintain constant bottom depth, trawl wingspread, and towing speed (3 knots) during each tow. However, when depths changed significantly, the trawl warp was adjusted to maintain wingspread and bottom contact. The trawl opening tended to increase horizontally and decrease vertically with depth due to the increased amount of deployed trawl cable.

Catches weighing less than approximately 1,000 kg were completely sorted to species, weighed, and counted. Larger catches were completely sorted also, however weights and numbers of the most abundant species were determined either by weighing with a load cell or by using volumetric calculations and extrapolation. Biological data and specimens collected included fish lengths and weights, age structures, sexual maturities and special collections of stomachs, tissues, whole fish and invertebrates. Individual fish weight data were collected using a Marel¹ motion compensated electronic scale.

Water temperature profiles were collected at each station using a headrope mounted bathythermograph data logger and additional sea surface temperatures were measured using calibrated bucket thermometers. A more detailed account of survey sampling methodology, list of species names, relative abundance and biomass estimates of the major groundfish species will appear in a future NOAA Technical Memorandum.

RESULTS

Sampling proceeded east from the Islands of Four Mountains along the shelf to approximately 147° W long. in depths ranging from 20 to 448 m. Successful hauls were completed for 489 of the 528 attempted tows. The average net opening was 15.8 m wide by 6.9 m high. Survey tow duration averaged 16.40 minutes, distance fished averaged 1.51 km and towing speed averaged 5.6 km (3.0 nautical miles) per hour over the bottom.

Catches included more than 138 species of fish and 304 species of invertebrates. The dominant fish species are ranked by mean catch per unit effort in Table 1, expressed as kilograms of catch per hectare ($10,000 \text{ m}^2$) of bottom area within each of the three sampled INPFC statistical areas. The species highest in total catch abundance (by weight) over the entire survey area were arrowtooth flounder (61.69 kg/ha), Pacific ocean

¹ Reference to trade names does not imply endorsement by the National Marine Fisheries Service, NOAA.

perch (30.52 kg/ha), Pacific halibut (15.65 kg/ha) and northern rockfish (15.58 kg/ha). Catch rates were generally highest in the Shumagin INPFC area (170° W long. to 159° W long.) followed by the Kodiak area (154° W long. to 147° W long.) and lowest in the Chirikof area (159° W long. to 154° W long.). The Shumagin area had the highest catch rate of walleye pollock (14.17 kg/ha) and Pacific cod (21.74 kg/ha) as well as northern and southern rock sole (6.08 and 9.68 kg/ha, respectively), while the Chirikof area had the highest concentration of arrowtooth flounder (98.54 kg/ha) and Pacific halibut (17.06 kg/ha). Estimates of invertebrate catch rates are probably conservative as a consequence of using roller gear footropes on the trawls. Deepwater species occurring in catches along the continental slope included the grenadier family, sablefish, shortspine thornyhead (*Sebastolobus alascanus*), longspine thornyhead (*Sebastolobus altivelis*), and shortraker rockfish (*Sebastes borealis*).

The biological data collected to determine length frequency distributions included measurements of over 56,340 fish representing 58 species. Specimen data were collected from 33 species including 8 rockfish, 9 flatfish, 5 skates, 2 salmonids, 2 gadids, and 2 sharks. The specimen data collection included 4,102 age structures and 13,178 individual weight measurements. Additionally, over 5,244 stomach samples were collected from forty different species for Resource Ecology and Fisheries Management Division trophic interaction studies.

Oceanographic data included sea temperature measurements and bottom type classification. Sea surface temperatures were collected at 523 survey stations and averaged 9.26°C with a range of 4.1°C to 13.9°C. Bottom temperatures were taken from 494 stations and averaged 5.86°C with a range of 4.1°C to 12.3°C.

ORGANIZATION OF REPORT AND DATA STANDARIZATIONS

The purpose of this report is to provide the fishing industry and public with pertinent catch information collected by the survey vessels. The report focuses on data

collected at individual stations for the principal species encountered during the survey. The fishing results are presented in Section 1 for the F/V *Morning Star* and Section 2 for the F/V *Vesteraalen*. Each section has two parts: 1) station charts with haul numbers plotted adjacent to their respective geographical locations and 2) summary listings of species caught in each haul. A combined fishing log for both vessels showing catches ranked by weight for selected commercial species is listed in Section 3. The combined fishing log includes catches of rockfish species, Atka mackerel (*Pleurogrammus monopterygius*), walleye pollock, Pacific cod, flatfish species, lingcod, Pacific herring, king and Tanner crab, scallops, shrimp, octopus and red squid (*Berryteuthis magister*).

Explanations of the performance codes appearing in the fishing logs are summarized in Table 2. Fishing gear specifications and diagrams are presented in Section 4.

Table 2. -- Performance codes used during the 2001 Gulf of Alaska bottom trawl survey.

Codes	Performance
0	Good performance
1	Satisfactory performance, hung up
1.1	Satisfactory performance, minor hang(s)
1.11	Satisfactory performance, completed tow
1.12	Satisfactory performance, hauled back early due to hang(s)
1.2	Satisfactory performance, major hang, stopped forward progress of vessel.
2	Satisfactory performance, unspecified gear damage
2.1	Satisfactory performance, wing damaged
2.4	Satisfactory performance, belly damaged
3.1	Satisfactory performance, caught pot, unspecified type
3.13	Satisfactory performance, Alaskan crab pot
4	Satisfactory performance, caught unspecified object
4.1	Satisfactory performance, caught large rock
4.4	Satisfactory performance, large fish catch affected net performance
4.5	Satisfactory performance, large invertebrate catch affected net performance
5	Satisfactory performance, unspecified gear performance problem
5.1	Satisfactory performance, net came off bottom
5.3	Satisfactory performance, weather affected trawl performance
5.4	Satisfactory performance, unspecified door problem
5.41	Satisfactory performance, door digging or falling over
5.5	Satisfactory performance, net crabbing severely
6.1	Satisfactory performance, depth change over tow exceeds survey defined limits
-1	Unsatisfactory performance, hung up
-1.12	Unsatisfactory performance, hauled back early due to hang(s)
-1.2	Unsatisfactory performance, major hang, stopped forward progress of vessel
-2.1	Unsatisfactory performance, wing damaged
-2.2	Unsatisfactory performance, breastline damaged
-2.4	Unsatisfactory performance, belly damaged
-4	Unsatisfactory performance, caught unspecified object
-5.1	Unsatisfactory performance, net came off bottom
-5.23	Unsatisfactory performance headrope/footrope tangled
-5.41	Unsatisfactory performance, door digging or falling over
-5.42	Unsatisfactory performance, doors crossed

Section 2**Fishing Log for the F/V *Vesteraalen***

- Station charts of haul numbers plotted adjacent to their respective geographical positions

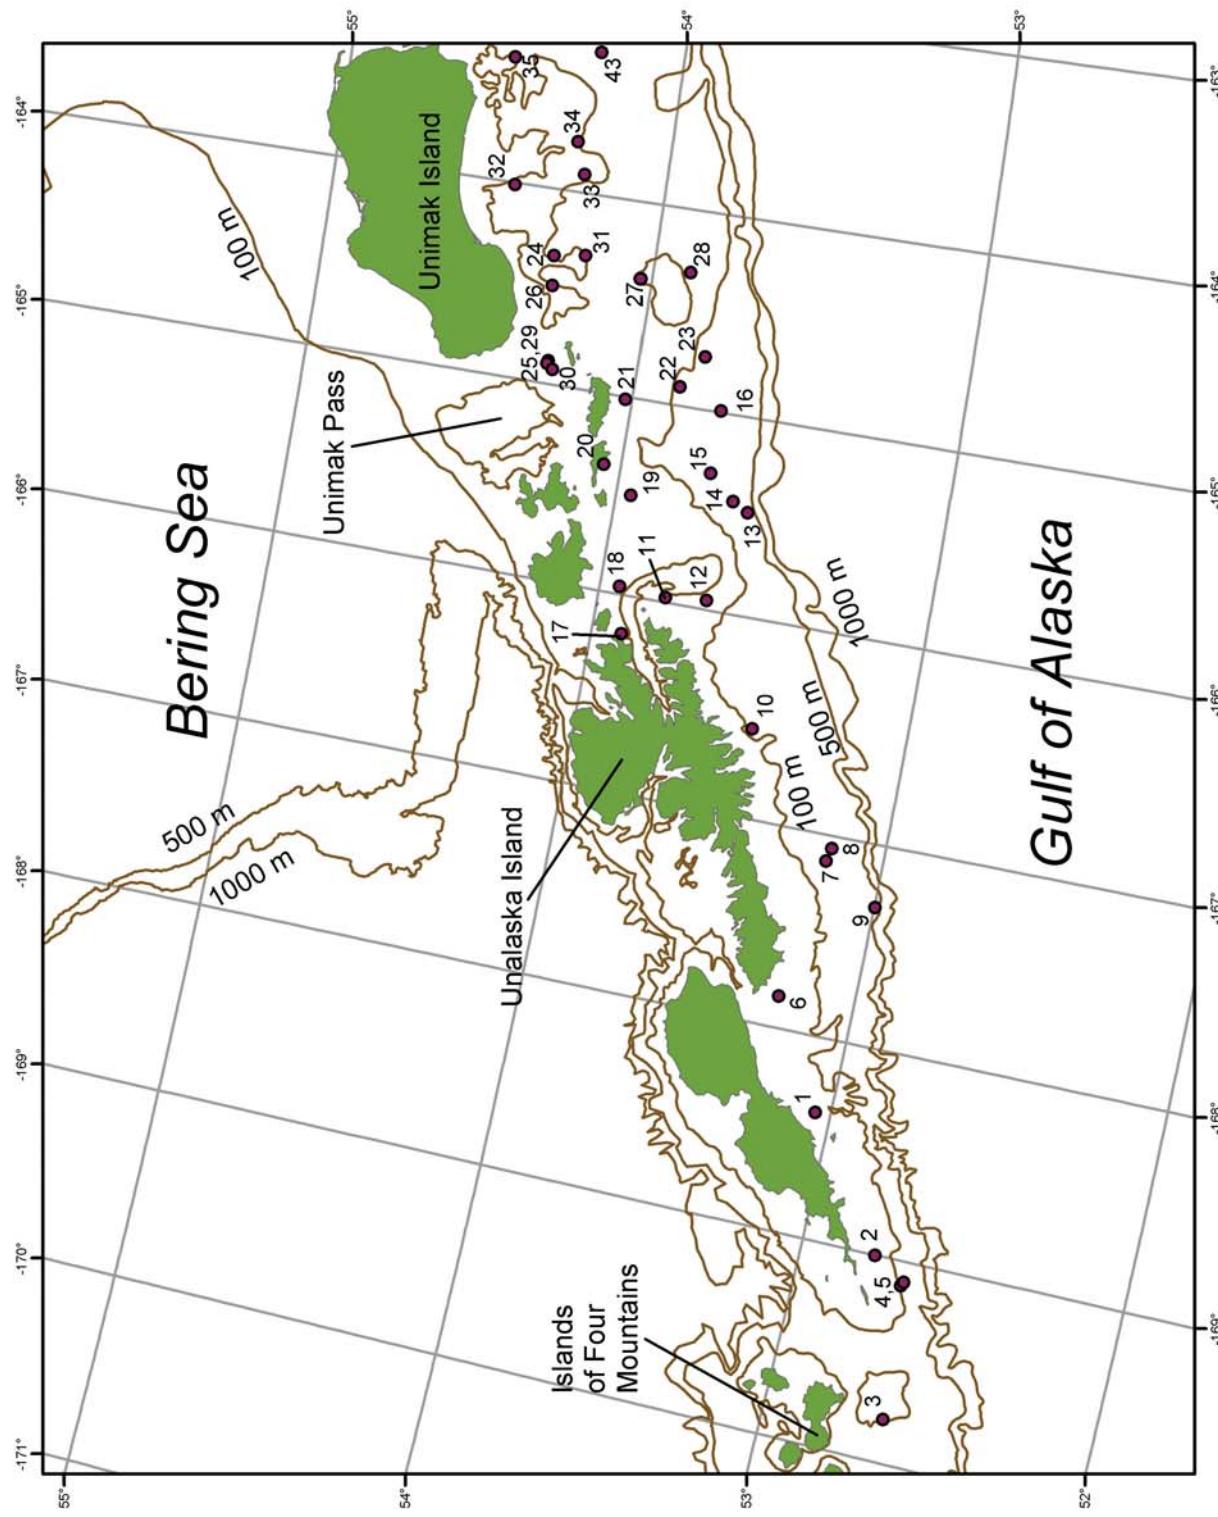

Figure 6.--Stations surveyed by the chartered trawler F/V *Vesterålen* from the Islands of Four Mountains to Unimak Island.

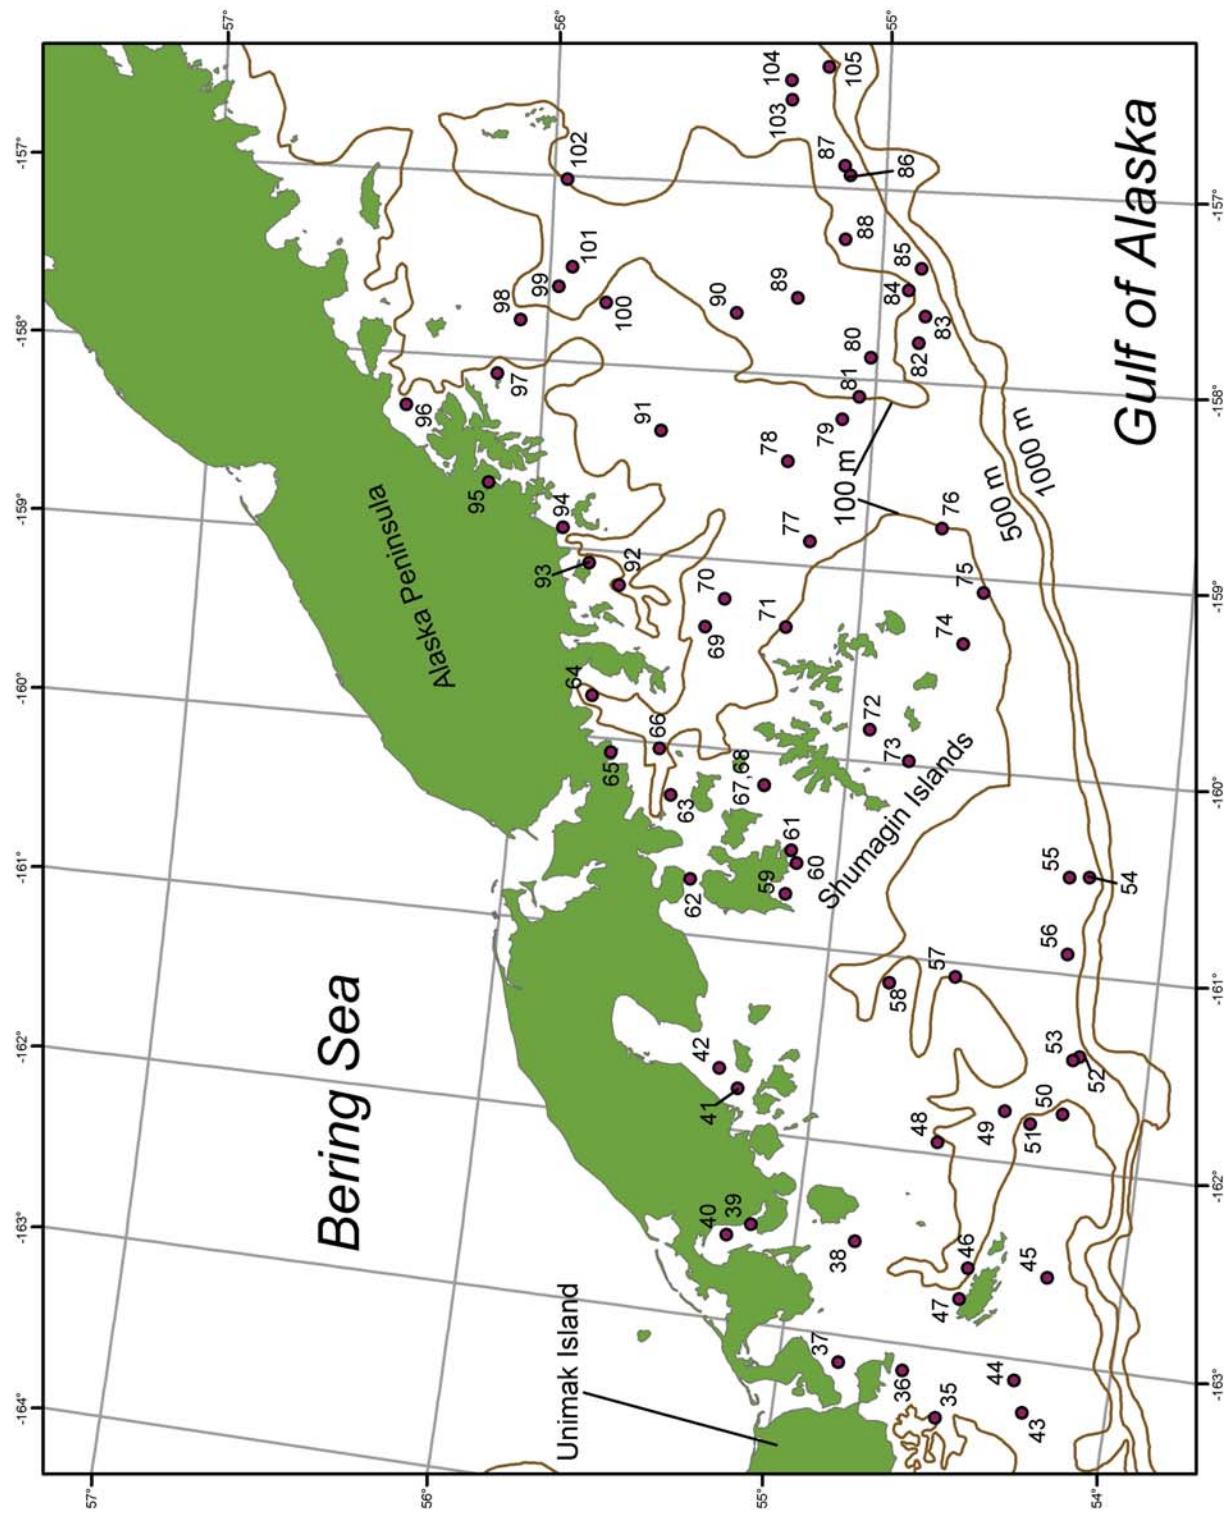

Figure 7.--Stations surveyed by the chartered trawler F/V *Vesteraalen* in the vicinity of the western Alaska Peninsula.

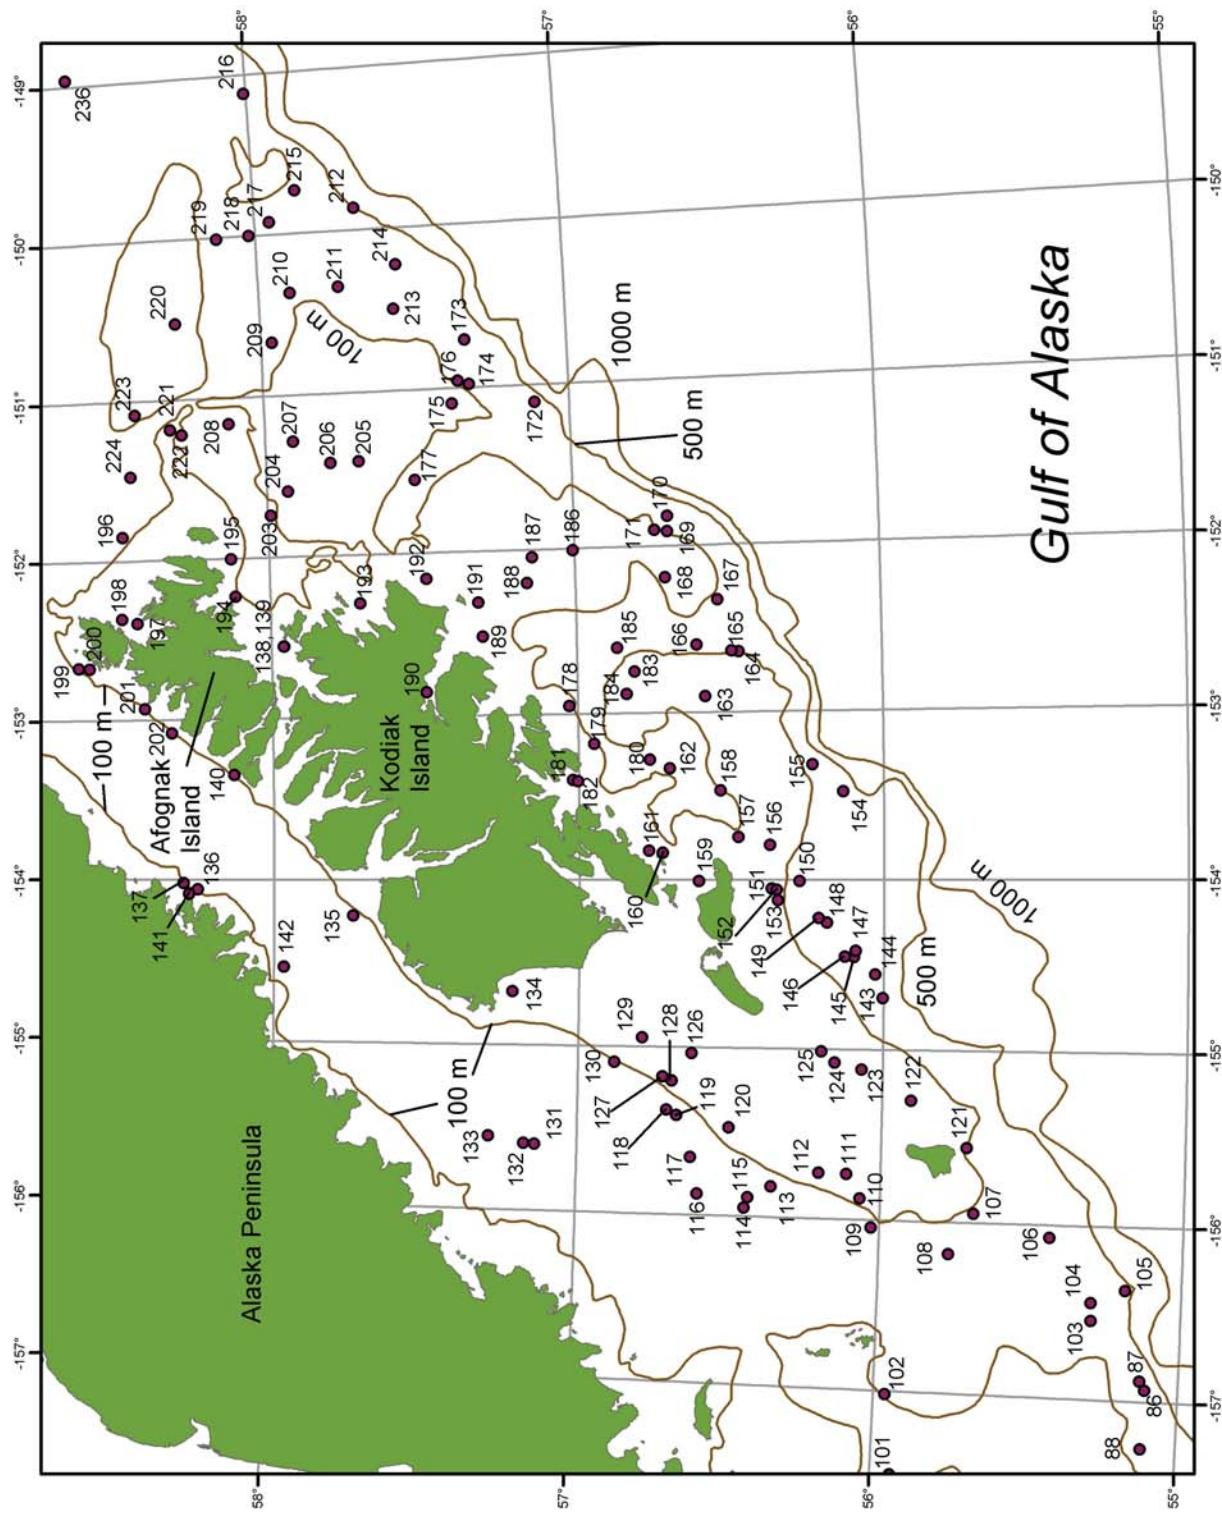

Figure 8.--Stations surveyed by the chartered trawler F/V *Vesteralen* in the vicinity of Kodiak Island.

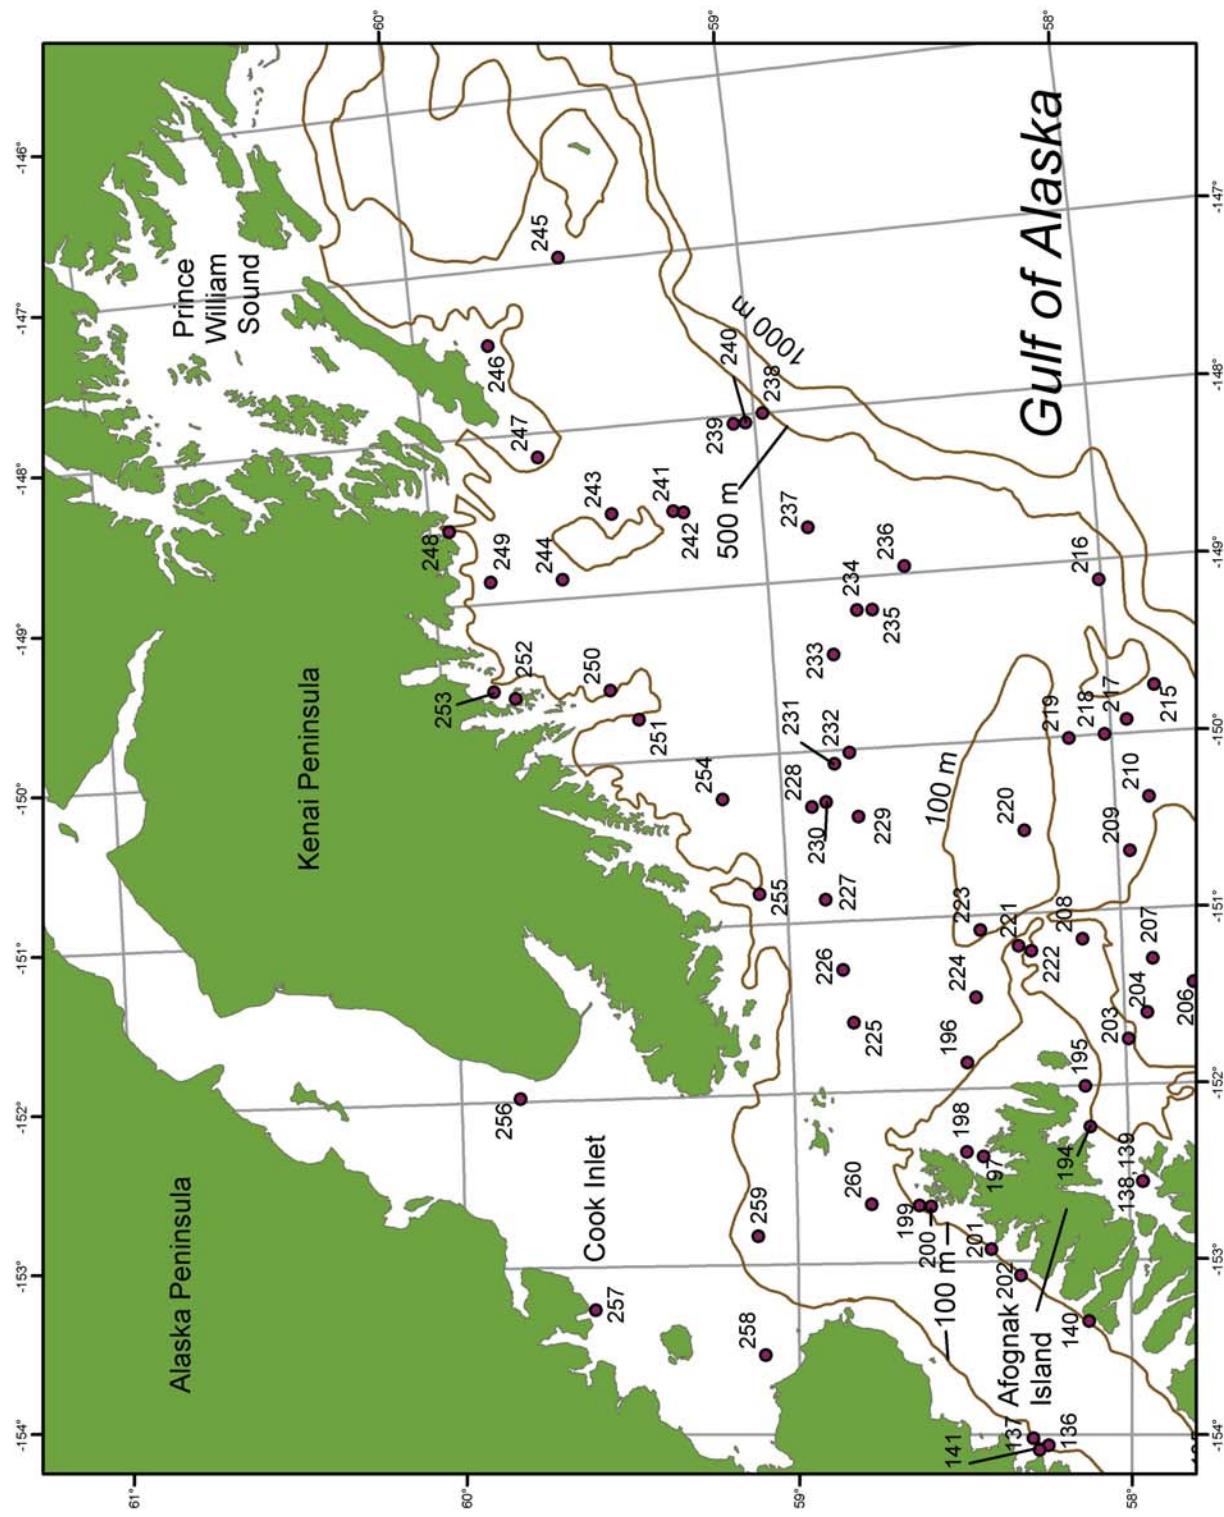

Figure 9.—Stations surveyed by the chartered trawler F/V *Vesteraalen* from Afognak Island to Prince William Sound.

Section 2 (continued)**Fishing Log for the F/V *Vesteraalen***

- Summary listings of species catches by haul
- Haul start/end latitude and longitude in degrees, minutes, and decimal minutes
- Bottom depth in meters
- Duration of tow in minutes
- Distance fished in kilometers
- Catch weight in kilograms of principal species
- Total catch weight in kilograms of all species

Section 3**Ranked Catch Per Unit Effort by Species or Species Group**

- The summary listings of catch rates for selected species are presented as kilograms of catch per hectare (kg/ha) trawled.
- Average individual animal weight (kg).
- Vessel codes (57 = *Morning Star* and 94 = *Vesteraalen*)
- Average bottom depth is in meters

Principal species CPUE and average individual weight by vessel, haul, and depth during the 2001 Gulf of Alaska survey.

Species	CPUE	Individual weight		Gear depth		CPUE	Individual weight		Gear depth

Section 4

Trawl and Accessories

Specifications and Diagrams

Specifications of the trawl, otter doors, and accessory gear used by the chartered trawlers, *Morning Star* and *Vesteraalen* during the 2001 bottom trawl survey of the Gulf of Alaska.

Equipment	Specifications
Netting -	Polyethylene, 12.7 cm (5 in), 4 & 5 millimeter (mm) twine.
Headrope -	27.2 m (89 ft-1 in), 1.3 cm (1/2 in) 6 x 19 gauge galvanized wire rope, wrapped with 1 cm (3/8 in) 3-strand polypropylene rope.
Footrope -	24.9 m (81 ft-7 in), 1 cm (3/8 in) 6 x 19 gauge galvanized wire rope wrapped with polypropylene rope.
Fishing line -	24.3 m (79 ft-7 in), shot-peened long-link chain. Safe working load 5.1 metric tons (t).
Roller gear -	24.2 m (79 ft-6 in), 1.9 cm (3/4 in) diameter, 6 x 19 gauge galvanized wire rope strung through 10.2 cm (4 in) diameter rubber disks, 16 rubber wing bobbins 35.6 cm (14 in) in diameter and 34 galvanized rings hung with 30.5 cm (12 in) long dropper chain.
Breastlines -	1 cm (3/8 in) 6 x 19 gauge galvanized wire rope wrapped with 1 cm polypropylene. Top corner 5.9 m (19 ft-6 in); bottom corner 2.6 m (8 ft-8 in); top side panel 5.9 m; bottom side panel 9.3 m (30 ft-6 in).
Riblines -	1.9 cm (3/4 in) Sampson ^{*/} 2 & 1 Duralon ^{*/} . Top two 34.8 m (114.17 ft) and bottom two 31.8 m (104.45 ft), hung 98% of stretched seam length.
Flotation -	Cycolac ^{*/} trawl floats, 30.5 cm (12 in) diameter, 21 pieces. Buoyancy 10.2 kg (22.4 lb.) each and rated for 800 m (400 fm) depth.
Codend liner -	Nylon, no. 18, 3.2 cm (1-1/4 in) stretched mesh (M), 315 M circumference and 200 M deep, laced to inner bag. When stretched the liner protrudes 61-91 cm (2 to 3 ft) beyond codend.
Restrictors -	Polypropylene rope, 2.5 cm (1 in) diameter, 4.3 m (14 ft) circumference and secured loosely to codend at each ribline, 1.2 m (4 ft) apart, 5 pieces.
Splitting gear -	1.3 cm (1/2 in) diameter 6.4 m (21 ft) long galvanized wire rope is passed through 4 galvanized steel rings which are secured to the codend with 1.3 cm diameter braided nylon "spiders".
Side seams -	Panels are joined to each other gathering 3 M (4 knots) from each panel. Panels that are secured to framing lines have a selvaged edge created by gathering 3 M.
Rigging -	3 dandy lines each side, 1.6 cm (5/8 in) diameter galvanized wire rope, 54.9 m (30 fm) long.
Doors -	1.8 m x 2.7 m (6 x 9 ft), steel V-doors, approximately 800 kg (1,800 lb) each.
Chafing gear -	Polypropylene 10 in M, 1 cm (3/8 in) polyrope hog-ringed (or interwoven) together, 46 M circumference and 21 M deep, laced to outer bag 68.5 M up from the pucker rings.

Figure 11.--Poly Nor'Eastern Diagram**POLY-NOREASTERN (Race)**

Total mesh counts

Twine sizes: top and sides 4mm
bottom and intermediate 5mm

Web: Chaffing strip along inside of Bottom wings and Busom. Cut 8 meshes wide.
5 mm Double Bar mesh, goring 3 meshes on each side (leaving 2 open meshes).
Secure 3 mesh of gore on inside (Bar Cut) of Bottom wings, and securing other gore to footrope (Bolsh).
