STANDARD DENSITY AND VOLUMETRIC TABLES

ABSTRACT

This circular contains standard density tables and others of a similar nature most often required in physical and chemical laboratories. For example, the density of water at all temperatures from 0° C. to 102° C.; the density of various percentages of ethyl alcohol at various temperatures; the density and pounds per gallon of milk and cream, and of American petroleum oils; temperature corrections to the indications of hydrometers in alcohol, sugar, petroleum oil, and sulphuric acid solutions. Tables are also given showing the relation between degrees Baumé and specific gravity for both heavy and light liquids; the relation of degrees A. P. I. and specific gravity; the capacities of glass vessels from the weight of water contained or delivered; and master scales for the graduation of hydrometers (alcoholometers).

CONTENTS

	Page
Introduction	3
Table 1. Density (in grams per milliliter) of mixtures of ethyl alcohol and water at 10, 15, 20, 25, 30, 35, and 40° C.....	4
Table 2. Density (in grams per milliliter) of mixtures of ethyl alcohol and water at 20° C. given to tenths per cent.....	6
Table 3. Specific gravity at $\frac{60^\circ}{60^\circ}$ F. ($\frac{15^\circ 56}{15^\circ 56}$ C.) of mixtures (by volume) of ethyl alcohol and water given to tenths per cent.....	8
Table 4. Temperature corrections to readings of alcoholometers (standard at 60° F.).....	10
Table 5. Percentages by volume at 60° F., corresponding to various percentages by weight in mixtures of ethyl alcohol and water..	16
Table 6. Percentages by weight corresponding to various percentages by volume at 60° F. in mixtures of ethyl alcohol and water....	18
Table 7. Temperature corrections to readings of alcoholometers (standard at 20° C.)	19
Table 8. Density at 15° C. of mixtures (by weight) of methyl alcohol and water.....	20
Table 9. Specific gravity at $\frac{15^\circ}{15^\circ}$ C. of mixtures (by volume) of methyl alcohol and water.....	21
Table 10. Percentages by volume at 15° C., corresponding to various percentages by weight in mixtures of methyl alcohol and water..	22
Table 11. Temperature corrections to readings of saccharometers (standard at 20° C.).....	23
Table 12. Density of solutions of cane sugar at 20° C.....	24
Table 13. Density of solutions of sulphuric acid (H ₂ SO ₄) at 20° C.....	26
Table 14. Temperature corrections to per cent of sulphuric acid determined by hydrometer (standard at 20° C.).....	27
Table 15. Temperature corrections to readings of specific gravity hydrometers in American petroleum oils at various temperatures...	28

	Page.
Table 16. Temperature corrections to readings of A. P. I. hydrometers in American petroleum oils at various temperatures.....	29
Table 17. Degrees Baumé, degrees A. P. I., pounds per gallon, and gallons per pound corresponding to various specific gravities.....	30
Table 18. Specific gravities, pounds per gallon, and gallons per pound corresponding to various degrees Baumé for light liquids....	31
Table 19. Specific gravities, pounds per gallon, and gallons per pound corresponding to various degrees A. P. I.....	32
Table 20. Degrees Baumé corresponding to specific gravities at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.) for liquids heavier than water.....	33
Table 21. Specific gravities at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.) corresponding to degrees Baumé for liquids heavier than water.....	35
Table 22. Degrees Baumé corresponding to specific gravities at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.) for liquids lighter than water.....	36
Table 23. Specific gravities at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.) corresponding to degrees Baumé for liquids lighter than water.....	37
Table 24. Degrees A. P. I. corresponding to specific gravities at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.).....	39
Table 25. Specific gravity at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ.56}{15^\circ.56}$ C.) corresponding to degrees A. P. I.....	40
Table 26. Specific gravity and weight per gallon of milk and cream.....	42
Table 27. Volume of milk and cream at various temperatures occupied by unit volume at 68° F. (20° C.).....	43
Table 28. Conversion of density basis.....	44
Table 29. Weight (in grams) of 1 liter of dry air at various pressures and temperatures.....	45
Table 30. Difference between the mass and apparent weight of water when weighed in air.....	45
Table 31. Density of water at temperatures from 0° to 102° C.....	46
Table 32. Density of pure water free from air from 0° to 41° C.....	47
Table 33. Weight of a gallon of water at various temperatures.....	48
Table 34. Weight of a cubic foot of water at various temperatures.....	50
Table 35. Apparent weight (in grams) of water in air from 15 to 30° C..	52
Table 36. Temperature correction for glass volumetric apparatus.....	52
Table 37. Apparent weight (in grams) of water in air from 15 to 100° C..	53
Table 38. Temperature correction for volumetric solutions.....	54
Table 39. Reduction of weighings to vacuo.....	55
Tables 40 to 52. Tables for the calculation of the capacity of glass vessels from weight of water in air.....	56
Table 53. Master scale for the graduation of hydrometers to indicate percentages of ethyl alcohol by weight at 20° C.....	62
Table 54. Master scale for the graduation of hydrometers to indicate percentages of ethyl alcohol by volume at 60° F.....	66
Index.....	71

INTRODUCTION

The wide application of hydrometers as measuring instruments in the collection of revenues in commerce and in the industries makes it very important to define the various scales of indication of these instruments in terms of fundamental units.

The confusion and discordance heretofore resulting from the use of various insufficiently defined hydrometer scales, and the lack of opportunity for verifying standards on a uniform basis, led the bureau to investigate the problems connected with hydrometry and to prepare standard density tables for definition of hydrometer scales.

In bureau circular No. 16 the conditions are announced under which the testing of hydrometers will be conducted, and specifications are given as to the construction, standardization, and accuracy required for hydrometers in order that they be approved as precision instruments.

The present circular comprises the density tables which have been adopted for definition of hydrometer scales, auxiliary tables which have been prepared for reduction of hydrometer readings, tables for computation of volumetric capacity, and others of similar nature giving physical constants for which the bureau receives frequent inquiries.

In all tables found in this circular the term *density* is used to represent the *mass per unit volume* and is expressed in *grams per milliliter*.

The term *specific gravity* is used to express the *relative masses of equal volumes* of the liquid in question and of water, *each liquid* being at a *definitely stated temperature*. For example, specific gravity at 60° / 60° F. means the specific gravity of the liquid at 60° F. referred to water at 60° F. as unity.

The density values in Tables 1, 2, 8, 12, 13, 31, and 32 are numerically the same as specific gravities at the various temperatures referred to water at 4° C. as unity.

For the sake of uniformity the same abbreviation, D, with the proper temperature basis, is used for both density and specific gravity.

GEORGE K. BURGESS,
Director.

Approved:
HERBERT HOOVER,
Secretary.

¹ The density values given in this table are numerically the same as specific gravity at 20° C. in terms of water at 4° C. as unity.

TABLE 3.—Specific gravity at $\frac{60^\circ}{60^\circ}$ F. $\left(\frac{15^\circ 56}{15^\circ 56}$ C.) of mixtures (by volume) of ethyl alcohol and water

[* indicates change in first two decimal places. See next line, column 0]

TABLE 4.—Temperature corrections to readings of alcoholometers (standard at 60° F.)

[This table is calculated from the same data on the thermal expansion of ethyl alcohol as that from which Tables 1, 2, 3, 5, 6, and 7 are calculated. The hydrometer is assumed to be of Jena 16^{mm} glass. For the per cents not given between 40 and 80, linear interpolation of the tabulated corrections will give results sufficiently exact for most purposes]

TABLE 7.—Temperature corrections to readings of alcoholometers (standard at 20° C.)

[This table is calculated from the same data on the thermal expansion of ethyl alcohol as that from which Tables 1, 2, 3, 4, 5, and 6 are calculated. The hydrometer is assumed to be of Jena 10¹⁰⁰ glass]

Observed temperature in degrees centigrade	Observed per cent alcohol by weight

TABLE 11.—Temperature corrections to readings of Saccharometers (standard at 20° C.)

[This table is calculated using the data on thermal expansion of sugar solutions by Plato,¹ assuming the instrument to be of Jena 16^{mm} glass. The table should be used with caution and only for approximate results when the temperature differs much from the standard temperature or from the temperature of the surrounding air]

Temperature in degrees centigrade	Observed per cent of sugar													
	0	5	10	15	20	25	30	35	40	45	50	55	60	70

120	3.3	3.8	4.5	5.3	6.4			

(This table is calculated from the same data as Table 1, Circular No. 154, Bureau of Standards.)

For complete petroleum oil tables see Circular No. 154, Bureau of Standards.

NOTE.—In order to overcome the confusion that has existed in the petroleum-oil industry by reason of the use of two so-called Baumé scales for light liquids, the American Petroleum Institute, the Bureau of Mines, and the Bureau of Standards in December, 1921, agreed to recommend that in the future only the scale based on the modulus 141.5 be used in the petroleum-oil industry, and that it be known as the A. P. I. scale. The relation of degrees A. P. I. to specific gravity is expressed by the formula

$$\text{Degrees A. P. I.} = \frac{141.5}{\text{Sp. Gr. } 60^\circ/60^\circ \text{ F.}} - 131.5$$

The U. S. Baumé scale based on the modulus 140 will continue to be used for other liquids lighter than water.

(See Tables 24 and 25 of this circular for the relation of degrees A. P. I. to specific gravity.)

TABLE 17.—Degrees Baumé, degrees A. P. I.,¹ pounds per gallon, and gallons per pound corresponding to various specific gravities

Specific gravity 60°/60° F.	Degrees Baumé (modulus 140)	Degrees A. P. I. (modulus 141.5)	Pounds per gallon	Gallons per pound

38	.995	1.006	8.30	8.39
39	.994	1.005	8.29	8.38
40	.993	1.005	8.28	8.38

Specific gravity 20°/4° C. means the specific gravity at 20° C. (68° F.) in terms of water at its maximum density as unity, and specific gravity 10°/4° C. means the specific gravity at 10° C. (50° F.) in terms of the same unit. These specific gravity values are numerically the same as density at 20 and 10° C., respectively, in grams per milliliter.

NOTE.—The specific gravity at 20°/20° C. (68°/68° F.) corresponding to any percentage of fat can be obtained by dividing the specific gravity at 20°/4° C. by the density of water at 20° C. (0.9982343).

TABLE 27.—Volume ¹ of milk and cream at various temperatures occupied by unit volume at 68° F. (20° C.)

¹ The tabulated values are given to the nearest 0.0005.

TABLE 28.—Conversion of density basis

Prepared for use in reducing readings of a hydrometer graduated to indicate density or specific gravity at a specified standard temperature, T , referred to water at a specified temperature, T' , as unity, to the basis of another standard temperature, t , and reference temperature, t' .

The factor Δ (given in units of the sixth decimal place), multiplied by the density or specific-gravity reading, gives the correction to be applied to the reading to reduce it to the required basis.

Suppose a hydrometer indicates specific gravity at $\frac{20^\circ}{4^\circ}$ C., and it is required to know the correction in order that it shall indicate specific gravity at $\frac{15.56}{15.56}$ C., then,

$$D_{\frac{15.56}{15.56}} = D_{\frac{20^\circ}{4^\circ}} + \Delta D_{\frac{20^\circ}{4^\circ}}$$

That is, if the hydrometer indicates correctly a specific gravity of 1.5760 at $\frac{20^\circ}{4^\circ}$, then at $\frac{15.56}{15.56}$ the reading of the instrument will be too low by $1.5760 \times 0.001062 = 0.0017$. A correction of 0.0017 must therefore be added to the indication of the hydrometer.

Or, if a maker using standards indicating $D_{\frac{20^\circ}{4^\circ}}$ C. wishes to graduate a hydrometer to indicate density at $\frac{15.56}{15.56}$ C. referred to water at $\frac{15.56}{15.56}$ C. ($D_{\frac{15.56}{15.56}}$ C.) the readings of the standard must be corrected as follows:

Suppose the standard correct at $\frac{20^\circ}{4^\circ}$ C. reads 1.5760
The correction to be applied is +.0017

Corresponding reading on instrument to be correct at $\frac{15.56}{15.56}$ C. is 1.5777
The table is calculated for Jena 16^{mm} glass.

¹ According to P. Chappuis, Bureau international des Poids et Mesures, Travaux et Mémoires, XIII; 1907.

TABLE 33.—Weight of 1 gallon of water

[This table is based on the water densities of P. Chappuis (Bureau International des Poids et Mesures. Travaux et Mémoires, XIII; 1907) for 0 to 40° C., and of M. Thiesen (Wiss. Abh. der Physikalisch-Technischen Reichsanstalt, 4, No. 1; 1904) for 41 to 100° C. The weights in air are for dry air at the same temperature as the water up to 40° C. and at a (corrected) barometric pressure of 760 mm and against brass weights of 8.4 density at 0° C. Above 40° C. the temperature of the air is assumed to be 20° C., i. e., the water is allowed to cool to 20° C. before the weighings are made. The volumetric computations are based on the relation that 1 liter=1.000027 cubic decimeters and 1 cubic decimeter=61.023378 cubic inches. The weights corresponding to 15 $\frac{1}{2}$ ° C. (60° F.) and 16 $\frac{1}{2}$ ° C. (62° F.) have been included in the table because of the frequent use of these temperatures in engineering and industrial work]

TABLE 35.—*Apparent weight (in grams) of water in air*

[This table gives the apparent weight, for temperatures between 15 and 30° C., humidity 50 per cent, un-reduced barometer reading 76 cm of certain volumes of water weighed with brass weights. This table is based on the data given in Tables 30 and 32, and may be conveniently employed to determine definite volumes of water for calibrating instruments. The table assumes the air to be at the same temperature as the water]

TABLE 36.—*Temperature correction for glass volumetric apparatus*

[This table gives the correction to be added to actual capacity (determined at certain temperatures) to give the capacity at the standard temperature, 20° C. Conversely, by subtracting the corrections from the indicated capacity of an instrument standard at 20° C. the corresponding capacity at other temperatures is obtained. The table assumes for the cubical coefficient of expansion of glass 0.000025 per degree centigrade. The coefficients of expansion of glasses used for volumetric instruments vary from 0.000023 to 0.000028]

TABLE 37.—*Apparent weight (in grams) of water in air*

[This table gives the apparent weight of certain volumes of water weighed against brass weights in air, humidity 50 per cent, barometer reading 76 cm (unreduced), weighings being made at 20° C., the water and air being at the same temperature. It differs from Table 35 only in its greater temperature range and in the fact that the water is allowed to come to a temperature of 20° C. before the weighings are made. The weighings may be made at any temperature between 18 and 22° without introducing errors greater than 1 mg. per 100 ml.]

TABLE 38.—Temperature correction for volumetric solutions

[This table gives the correction to various observed volumes of water, measured at the designated temperatures, to give the volume at the standard temperature, 20° C. Conversely, by subtracting the corrections from the volume desired at 20° C., the volume that must be measured out at the designated temperatures in order to give the desired volume at 20° C., will be obtained. It is assumed that the volumes are measured in glass apparatus having a coefficient of cubical expansion of 0.000025 per degree centigrade. The table is applicable to dilute aqueous solutions having the same coefficient of expansion as water]

Temperature of measurement, °C.	Capacity of apparatus in milliliters at 20° C.						
	2,000	1,000	500	400	300	250	150
	Correction in milliliters to give volume of water at 20° C.						
15	+1.54	+0.77	+0.38	+0.31	+0.23	+0.19	+0.12
16	+1.28	+.64	+.32	+.26	+.19	+.16	+.10
17	+.99	+.50	+.25	+.20	+.15	+.12	+.07
18	+.68	+.34	+.17	+.14	+.10	+.08	+.05

30	-4.62	-2.31	-1.16	-.92	-.69	-.58	-.35

In using the above table to correct the volume of certain standard solutions to 20° C. more accurate results will be obtained if the numerical values of the corrections are increased by the percentages given below:

Solution	Normality		
	N	N/2	N/10
HNO ₃	50	25	6
H ₂ SO ₄	45	25	5
NaOH.....	40	25	5
KOH.....	40	20	4

TABLE 39.—Reduction of weighings to vacuo

The weight of a body in vacuo is determined by adding to its apparent weight in air a buoyancy correction equal to the weight of the air displaced by the difference in volume of the body weighed and the weights required to balance it on an equal arm balance.

$$M = W + \rho \left(\frac{M}{d_1} - \frac{W}{d_2} \right) = W \frac{d_1}{d_2} \left(\frac{d_2 - \rho}{d_1 - \rho} \right) = W \frac{d_1}{d_1 - \rho} \left(1 - \frac{\rho}{d_2} \right) =$$

$$W \left[1 + \frac{\rho}{d_2} \left(\frac{d_2 - d_1}{d_1 - \rho} \right) \right] = W + k W / 1,000$$

M = weight in vacuo; W = apparent weight in air; ρ = density of air; d_1 = density of body; d_2 = density of weights.

The following table has been computed for $\rho = 0.0012$:

Density of body weighed g/cm ³	Correction factor, k			Density of body weighed, g/cm ³	Correction factor, k		
	Pt. Ir. weights d=21.5 g/cm ³	Brass weights 8.4	Quartz or Al. Wts. 2.65		Pt. Ir. weights d=21.5 g/cm ³	Brass weights 8.4	Quartz or Al. Wts. 2.65

TABLES OF CORRECTIONS FOR DETERMINING THE TRUE CAPACITIES
OF GLASS VESSELS FROM THE WEIGHT OF WATER IN AIR

Tables 35 to 47 are intended for the calculation of capacities of glass vessels of common sizes from the weight (in air) of the water contained or delivered. They give for each nominal capacity and observed temperature the amounts to be added to the apparent weight (in air against brass weights) of the water contained in or delivered by a glass vessel to give the capacity in milliliters at 20° C. They are calculated on the following data assumed as approximating ordinary conditions:

Observed barometric pressure.....	76 cm
Relative humidity.....	50 per cent
Coefficient of expansion of glass.....	0.000025 per ° C.

EXAMPLE OF USE OF TABLE

Determination of capacity of glass measuring flask marked "To contain 250 ml at 20° C."

Apparent weight of water at the observed temperature 22°3 C.....	249.198 g
From Table 40, correction.....	.813
Actual capacity at 20°.....	250.011 ml

TABLE 40.—Indicated capacity 250 ml

[Amounts to be added to apparent weight of water in grams to obtain actual capacity in milliliters at 20° C.]

MASTER SCALES FOR THE GRADUATION OF HYDROMETERS

The accompanying tables were prepared for the use of hydrometer makers in the graduation of hydrometer scales to indicate percentages of ethyl alcohol by weight at 20° C or by volume at 60° F, and they give the proportional length of any part of the hydrometer scale, assuming that the entire scale has a length of 1000 mm.¹ and that the hydrometer stem is of uniform cross section. For example, if it is required to construct a hydrometer scale having a certain range the spacing of the graduations of the scale should be made proportional to the differences of the lengths shown in the table for that range.

These tables were prepared from the alcoholometric tables published in this circular (Tables 2 and 3). The original work on which the tables are based is described in detail in the Bulletin of the Bureau of Standards, vol. 9, p. 328 (Reprint No. 197). The indications of hydrometers graduated in accordance with these master scales will be on the basis officially adopted by the Bureau of Standards. Hydrometers may also be graduated to indicate percentages of "proof spirit," according to the official tables of the United States Bureau of Internal Revenue (adopted 1913), by the use of the accompanying master scale intended for the graduation of hydrometers to indicate percentages of alcohol by volume at 60° F. The percentage of proof spirit is in every case twice the percentage of alcohol by volume. For example, 25 per cent alcohol by volume is equivalent to 50 per cent proof spirit; 50 per cent alcohol by volume is equivalent to 100 per cent proof spirit. The spacing of the graduations for proof spirit hydrometers can, therefore, be taken directly from Table 54, the per cent alcohol by volume being multiplied by 2 in each case to give the equivalent per cent proof spirit.

¹ Any other convenient unit may be employed; the tabulated lengths will then be in that unit.

TABLE 53.—Master scale for the graduation of hydrometers to indicate percentages of ethyl alcohol by weight at 20° C.

INDEX

	Page		Page
Air, weight per liter.....	45	Degrees A. P. I. corresponding to specific gravity.....	39
Alcohol, ethyl:		Degrees Baumé, degrees A. P. I., pounds per gallon, and gallons per pound corresponding to specific gravity.....	30
Densities of mixtures with water (by weight) at 10 to 40° C.....	4	Degrees Baumé corresponding to specific gravities:	
Densities of mixtures with water (by weight) at 20° C. to tenths of per cent..	6	For liquids heavier than water.....	33
Master scales for hydrometers.....	62	For liquids lighter than water.....	36
Per cents by volume corresponding to per cents by weight.....	16	Density basis, conversion of....	44
Per cents by weight corresponding to per cents by volume.....	18	Density of:	
Specific gravity of mixtures (by volume) at 60°/60° F.....	8	Air (dry).....	45
Temperature corrections to 60° F.....	10	Alcohol (ethyl) mixtures with water.....	4-6
Temperature corrections to 20° C.....	19	Alcohol (methyl) mixtures with water.....	20
Alcohol, methyl:		Milk and cream.....	42, 43
Densities of mixtures with water (by weight) at 15° C.....	20	Sugar solutions at 20° C....	24
Per cents by volume corresponding to per cents by weight.....	22	Sulphuric acid solutions at 20° C.....	26
Specific gravities of mixtures with water (by volume) at 15°/15° C.....	21	Water from 0 to 41° C....	47
Baumé tables:		Water from 0 to 102° C....	46
For liquids heavier than water.....	33-35	Ethyl alcohol. (<i>See</i> Alcohol, ethyl.)	
For liquids lighter than water.....	36-37	Glass volumetric apparatus:	
Capacity of glass volumetric apparatus.....	56	Capacity of.....	56
Conversion of density basis....	44	Temperature correction for..	52
		Master scales for the graduation of hydrometers to indicate:	
		Per cent alcohol by weight at 20° C.....	62
		Per cent alcohol by volume at 60° F.....	66
		Per cent "proof spirit" at 60° F.....	66
		Methyl alcohol. (<i>See</i> Alcohol, methyl.)	
		Milk and cream.....	42, 43

Petroleum oils:		Temperature corrections to:	
Degrees A. P. I., pounds per gallon, and gallons per pound, corresponding to specific gravities.....	30	Alcoholometers standard at 60° F.....	10
Specific gravities, pounds per gallon, and gallons per pound, corresponding to degrees A. P. I.....	32	Alcoholometers standard at 20° C.....	19
Temperature corrections to specific gravity hydrometers.....	28	Glass volumetric apparatus	52
A. P. I. hydrometers.....	29	Hydrometers for petroleum oils.....	28, 29
Proof spirit. (<i>See</i> Master scales.)		Hydrometers indicating per cent sulphuric acid at 20° C.....	27
		Saccharometers standard at 20° C.....	23
		Volumetric solutions.....	54
		Volumetric apparatus, glass:	
Reduction to vacuo.....	55	Temperature corrections for.....	52
		Capacity of.....	56
Saccharometers, temperature corrections for.....	23	Volumetric solutions, temperature corrections for.....	55
Specific gravities, corresponding to degrees Baumé:		Volume of milk and cream.....	43
For liquids heavier than water.....	35	Water:	
For liquids lighter than water.....	37	Density of, from 0 to 41° C.....	47
Of ethyl alcohol at 60°/60° F.....	8	Density of, from 0 to 102° C.....	46
Of methyl alcohol at 15°/15° C.....	21	Difference between mass and apparent weight in air.....	45
Specific gravities, pounds per gallon, and gallons per pound, corresponding to degrees Baumé..	31	Weight of, in air.....	53
Sugar solutions, density of, at 20° C.....	24	Weight per gallon.....	48
Sulphuric acid solutions:		Weight per cubic foot.....	50
Density at 20° C.....	26	Weight:	
Temperature corrections for hydrometers.....	27	Air per liter.....	45
		Milk and cream per gallon..	42
		Petroleum oil per gallon...	30
		Water per gallon.....	48
		Water per cubic foot.....	50
		In vacuo from weight in air.....	55
