The HEP Instrument Repair Group can help you meet the laboratory's mandate of 100% compliance in NRTL electrical equipment safety inspections, due by June 2011. Our staff of 3 Engineering Assistants and 2 Senior Technicians will inspect and evaluate each piece of equipment. We can certify NRTL compliance, and produce the necessary documentation, tagging and database entries required by the program. When feasible, we can remediate any non-compliant equipment and certify it for safe use, or recommend the most cost-efficient solutions. Our staff personnel have been trained in NEC NFPA 70E electrical code, and have been certified as electrical equipment inspectors by the laboratory. We are knowledgeable, efficient, and flexible to meet your special needs.

We offer two methods of participation. For groups with substantial needs, we recommend annual support of fractional Full-Time Equivalents (FTEs) of our staff, who would be dedicated to working on your equipment. The base rate is \$162K/yr per FTE plus 26% Lab Indirect, and you may choose the fractions as little as 10% (yearly participation required.) For smaller needs, we offer walk-in service at a base rate of \$90/hr plus 41% Lab Indirect. (Materials are extra.)

*We also offer Instrument Repair and Calibration Services
Printer Repair Specialists
No job too big or too small!*
