

## **Turn-key Technologies, Inc.**

Turn-key Technologies, Inc. was incorporated in 1992 after over twenty years as the United States branch of Multitone Electronics, PLC, the world's oldest paging equipment manufacturer. Turn-key Technologies, Inc. specializes in the design and installation of large on-site paging systems and paging networks covering extended areas. Our emphasis is directed towards Healthcare, Department of Defense, Homeland Security and Manufacturing where time critical communications are essential. Unlike many companies that sell paging as a side to two-way radios or carrier communications, TTI has always focused on customer owned paging.

TTI has designed, installed and maintained over 1000 paging systems throughout the United States, as well as DoD installations in Qatar, South Korea and Japan. Our dedication to quality and customer service is evident with numerous customers having been with us for over 30 years. We maintain a large technical staff of both bench and field technicians to support our customers and provide the best possible service. 24/7 coverage is offered in order to insure any critical failures cause a minimum of down time. Additionally, our Help Desk is available 24 hours by 365 days a year to insure all service issues are resolved as quickly as possible.

TTI has been at the forefront of narrowband paging migration for the Federal Government. To date, we have performed over 95 narrowband transitions for such agencies as the Department of Defense, Department of Veterans Affairs, Department of Energy, Department of Health and Human Services, and USCENTCOM. We have been working with several Offices of Emergency Management as well as The Department of Home Land Security throughout the country to provide a more reliable and robust means of communications. Our experience in narrowband paging is evident in our ever increasing portfolio of successful transitions.

As our name implies, we provide a full turn-key paging solution. TTI provides initial consultations, systems design, system build and testing, system installation, peripheral integrations, complete training and after sale service and support. Our NTIA approved equipment includes paging terminals, paging transmitters, and voice, alphanumeric, and numeric pagers. TTI also offers private two-way paging systems with no airtime charges.

TTI performs all of our pager repairs in our shop in Sayreville, NJ. By maintaining complete control of the repair process, we can generally turn repairs around within one week from receipt. TTI also stocks pagers on common frequencies to allow us to fulfill orders for add-on and replacement pagers in an efficient and time effective manner.
