When no flooding occurs, include miscellaneous river conditions, such as significant rises, record low stages, ice conditions, snow cover, droughts and hydrologic products issued (NWS Instruction 10-924).

X An X in this box indicates that no flooding has occurred for the month within this hydrologic service area.

Precipitation was at or near normal for the Pocatello Hydrologic Service Area (HSA) in February. Even though amounts were in normal range, January's record low precipitation took a very large chunk out of the region's 2007 Water Year amounts, which will definitely be influencing summer water supply needs.

# **Other Hydrologic Interests**

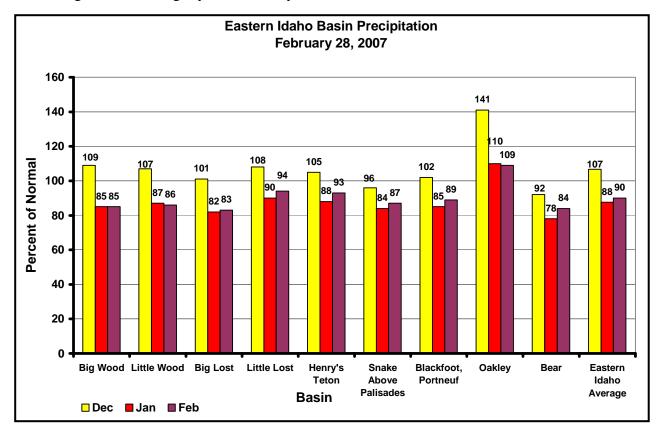

### Precipitation

The entire HSA received an average of 109.98% of normal precipitation for 47 of 56 reporting stations with climate data, according to Western Region Climate Center data. Slightly more than half of the stations received above normal precipitation in February, with Preston topping the list at 194.1% and Shoshone and Logan, Utah followed with 186.4% and 180.5% of normal, respectively. Oakley, Howe, Idaho Falls (2 ESE), Arco and Idaho Falls Airport (ASOS) all received less than 50% of normal precipitation, with the Idaho Falls Airport recording the least at only 17.6% of normal.

#### **River Levels**

River levels across the Pocatello HSA were at or near normal for February; however, icing affected a number of gages during the first couple of weeks of the month.

#### Snowpack

Eastern Idaho's snowpack changed little between January and February. Eastern Idaho's February basin average increased slightly from January from 88% to 90%.

## Reservoirs

The Upper Snake River reservoir system is at 79% of capacity<sup>1</sup>, up 6% from February 12, 2007<sup>2</sup>.

| Reservoir      | % Capacity<br>January 31 <sup>3</sup> | % Capacity<br>February 28 <sup>4</sup> | Percent<br>Change | % of<br>Average <sup>4</sup> | % of<br>Last Year <sup>4</sup> |

# Drought

Reservoir levels and soil moisture helps to maintain Eastern Idaho in the "Abnormally Dry" ranking, D0, on the Drought Monitor, which has been unchanged since late August. If below-normal precipitation continues, it will not be surprising if such conditions reveal themselves in the coming weeks on the Drought Monitor.

### February 2007 Hydrologic Product Summary

The following hydrologic products were issued in January.

| Product  | Number Issued |
|--|---------------|
| Flash Flood Warning  | 0             |
| Flash Flood Statement  | 0             |
| Flood Watch for Flash Flooding   | 0             |
| Flood Warning  | 0             |
| Flood Statement  | 0             |
| Flood Watch for Flooding   | 0             |
| Urban and/or Small Stream Flood Warning                                    | 0             |
| Urban and/or Small Stream Flood Advisory                                   | 0             |
| Hydrologic Outlook   | 0             |
| Hydrologic Statement   | 3             |
| NOW or Special Weather Statement<br>(with information related to flooding) | 0             |
