The Strength of Iron

Iron:

Iron helps your blood carry oxygen to your muscles and body parts. You have more energy and are healthier when you have enough iron in your blood. Children and adults who have adequate iron, learn faster and perform better at school and work.

Everyone needs iron every day.

Sources of iron are:

- Lean meat
(beef, pork, wild game)
- Kidney, heart, liver, gizzards
- Fish and shellfish
- Iron enriched cereals
- Poultry
- Dried peas and beans
- Blackstrap molasses

Get on the healthy track.
Include iron rich foods in your diet everyday!

Iron works hard delivering oxygen to your moving parts!

Did You Know?

Iron that comes from meat is used more easily than iron that comes from a plant source.

When you eat iron that comes from a plant source, it is recommended that you also drink or eat food that contains vitamin C. Vitamin C helps your body use iron better.

Cooking in an iron skillet adds small amounts of iron to food.

If an iron supplement has been prescribed, it is important to take it regularly, as directed.

Your body does not absorb all the iron available in the foods you eat when you drink coffee or tea.

Babies that are breastfed or formula-fed receive plenty of iron through the breastmilk or formula up to 1 year.
