Several trees were blown down in Harpersville.

A moist and unstable air mass, ahead of an advancing cold front, caused strong to severe thunderstorms, with scattered reports of large hail and damaging winds.

	06/30/08 23:59 CST		0	

Rainfall totals for June were below normal areawide, and in quite a few areas, more than three inches below normal.

Rivers, still feeling the effects of the 2007 drought, have been dropping to baseflow quicker than usual following rainfalls and there was not yet enough groundwater recharge to raise baseflow permanently.

Drought conditions were generally status-quo during the month, with D2 /Severe Drought/ in the eastern counties, and D1 or D0 conditions in most other locations.

A line of thunderstorms moved through Covington county around sunrise. The thunderstorms produced several lightning strikes that damaged transformers and knocked out power. An underground water line was struck and shattered the pipe. Water was shut off for over an hour to repair the pipe.

Severe drought conditions /D2/ were maintained during the month of July in all of northeast and much of north central Alabama.

Rains were of the typical summertime spotty variety. The heaviest rains fell in the Capshaw and Harvest communities northwest of Huntsville in Madison County, and in Vinemont and Cullman in Cullman County. Both of those locations saw over five inches of rain, with isolated spots over seven inches of rain. Rainfall in the Quad Cities region was only around one inch, and communities from Guntersville to Crossville and Boaz to Scottsboro saw less than an inch of rain for the month.

Rivers, still feeling the effects of the 2007 drought, dropped to base-flow quicker than usual following rainfalls and there was not yet enough groundwater recharge to raise baseflow permanently.
