

Lawrence Berkeley National Laboratory Planned Growth

Berkeley Planning Commission

February 14, 2007

Jim Krupnick
Laboratory Project Management Officer

Topics

- Background
- Motivation
- LRDP Summary
- Impacts

Lawrence Berkeley National Laboratory

Only multi-program Lab sited next to a university campus

- Collaboration**
- Partnerships**
- Support of UC education mission**

**Berkeley Lab
202-acre
main site**

UC Berkeley

Berkeley Lab Staff (2006)

3,359 staff plus visiting researchers = 4,515 adjusted daily population

Scientists and Engineers

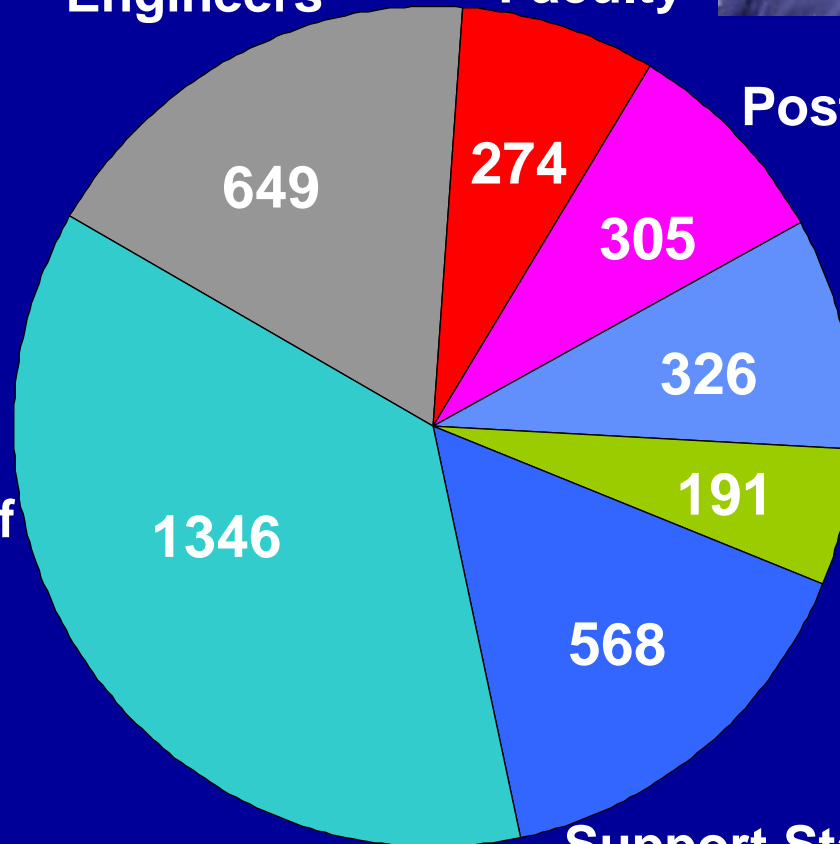

Faculty

Post docs

Technical Staff

Graduate Students

Undergraduate Students

Support Staff

FY 2006 Funding: \$517M

(approximately 80% Department of Energy)

What drives our development? Aging Infrastructure

- **100 buildings and 47 trailers**
 - 36% require modernization or retrofit
 - 18% not suitable for future use
- **Life Safety and seismic deficiencies**
- **Unsuitable for modern science**

Trailers

Old Town

**Seismic Safety
and Functionality**

What drives our growth? Science

Helios

Berkeley Lab's attack on the energy problem

Advanced Light Source National User Facility

CRT
Computational
Research and Theory

Advanced Light Source (materials and environmental sciences, biology)

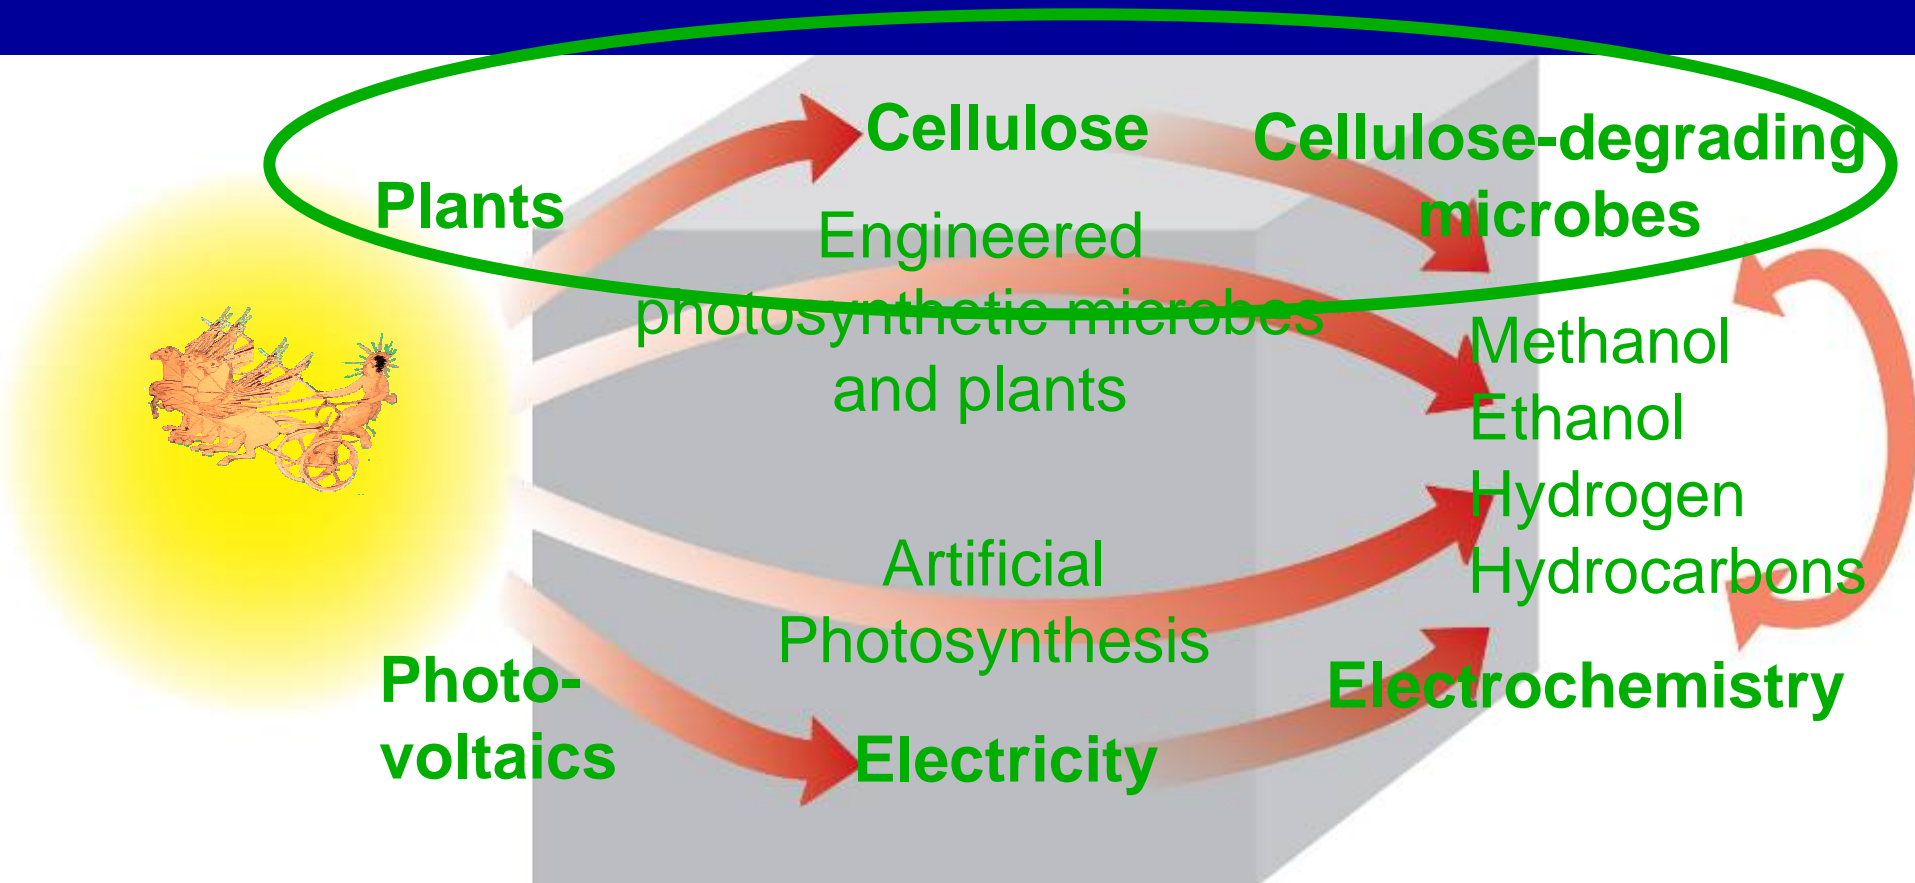

**Roger Kornberg, 2006 Chemistry Nobel Prize
work was done at the ALS;
Rod MacKinnon, 2003 Nobel Prize, also takes
his data here**

Buildings to Support Science at the Advanced Light Source

Helios

Berkeley Lab's Attack on the Energy Problem

Sunlight to energy via Bio-mass

More efficient use of water, sunlight, nutrients.
Drought and pest resistant

Improved conversion of cellulose into fuel.
New organisms for biomass conversion.

Feedstock Development

Maximize photosynthesis and productivity

Problem: Feedstock grasses (*Miscanthus* and Switchgrass) are largely unimproved crops

Helios Concept

Sunlight to Energy via Bio-mass

More efficient use of water, sunlight, nutrients.

Drought and pest resistant

Improved conversion of cellulose into fuel.

New organisms for biomass conversion.

Termites have Many Specialized Enzymes for Efficiently Digesting Lignocellulosic Material

The CRT program

- Strengthen the partnership with UCB computational and engineering programs
- Move the NERSC program back to the main site
- 143,000 square feet of computer floor and office space

Protecting the Gulf Coast

After Hurricane Katrina, the Army Corps of Engineers used NERSC's supercomputers to study how to rebuild Gulf Coast levees to better protect cities against surging waves driven by hurricanes

Berkeley Lab scientists are using supercomputers to create full-scale simulations of lean-burning flames to study how internal combustion devices can be designed to burn less fuel and create fewer pollutants

Assessing Global Warming

NERSC's massive data archive is used to store – and make accessible – one of the world's largest repositories of data used for predicting global climate change

Sea surface temperature (degrees C)

2006 Long Range Development Plan (LRDP)

- **Comprehensive physical planning guide for the next 20 years (2006 to 2025)**
- **Science-driven facilities, modest growth, sustainable development**
- **Commitment to listen and respond to local concerns**
 - **Reduced growth in space, population, and parking**
 - **Transportation demand management (TDM) and follow-up traffic study**

Reduced Growth Projections

Original Plan	Occupied space (gsf)	Population	Parking
2003 baseline	1,760,000	4,375	2,300
New construction	1,240,000		
Demolition	(440,000)		
Net increase	800,000	1,150	600
Original Projection	2,560,000	5,525	2,900

Current Plan			
2003 baseline	1,760,000	4,375	2,300
New construction	980,000		
Demolition	(320,000)		
Net increase	660,000	1,000	500
Total	2,420,000	5,375	2,800

Traffic and Transportation Issues

Berkeley Lab will dedicate resources to focus on transportation demand management

Developing new transportation demand management (TDM) plan in coordination with City of Berkeley Transportation Department

- **Commitment to minimize peak hour trips:**
 - **Commuters**
 - **Trucks (Deliveries/Construction)**
- **Improved bus use**
- **Annual monitoring and focused studies of transportation improvements**

40% rate of mass transit/carpool use - one of the highest in the Bay Area

Follow-up Comprehensive Traffic Study

Re-evaluate traffic impacts

At the earlier of:

- 10 years
- Cumulative increase of 375 parking spaces above the baseline in 2003

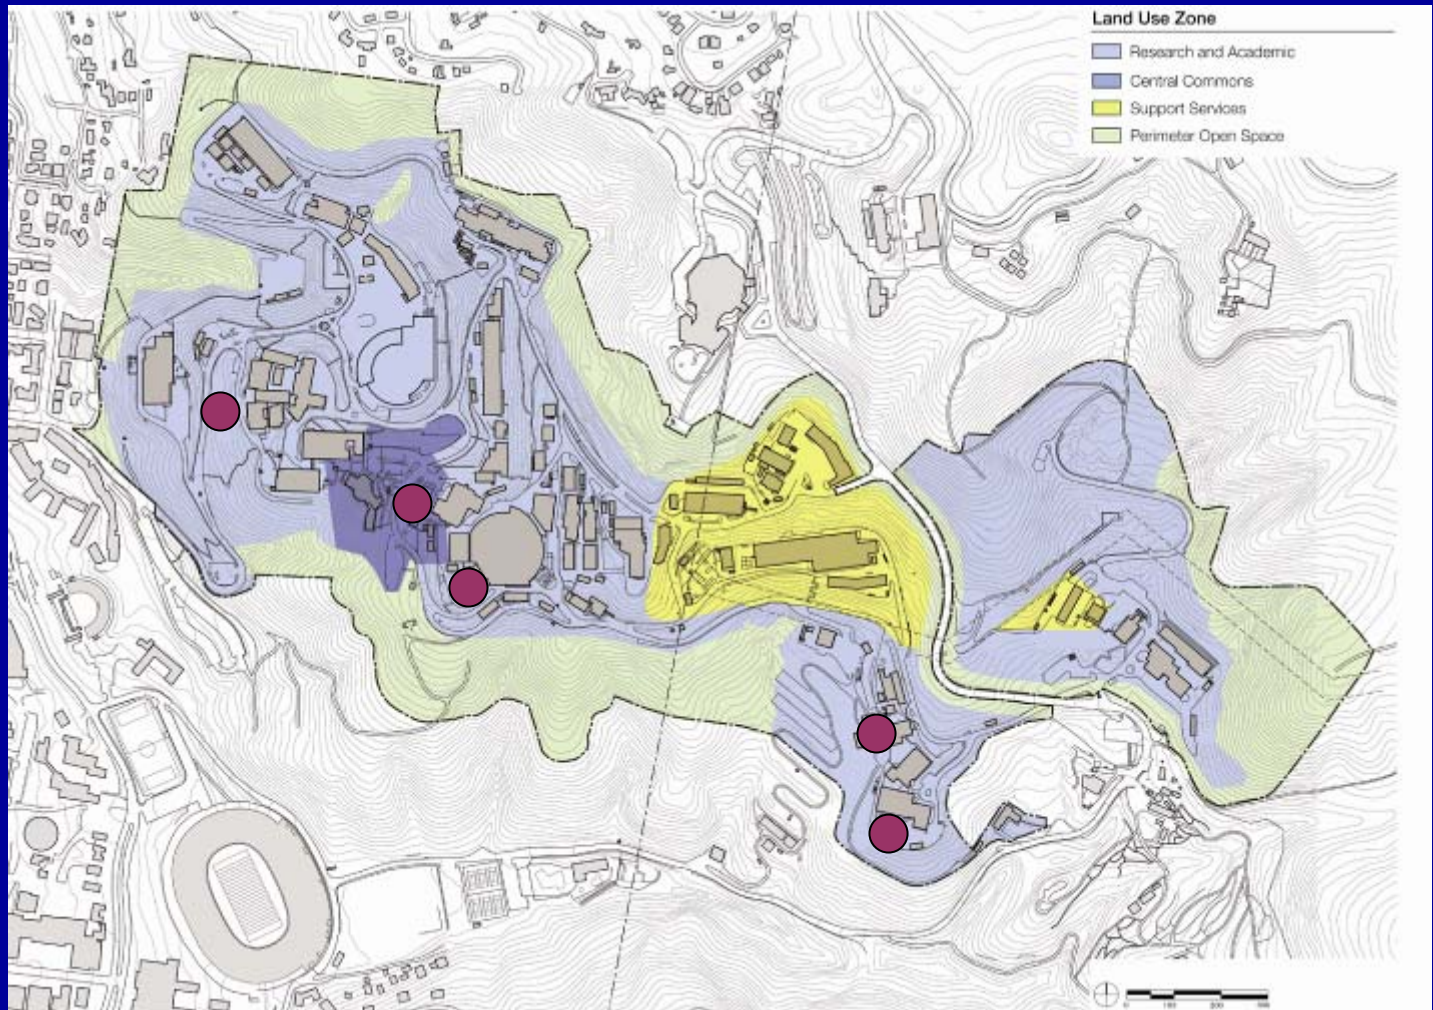

Hearst/La Loma-
Gayley Rd
intersection at
5:30 pm

Land Use Plan

Protects natural and visual resources, provides flexibility for siting facilities, minimizes visibility of development

-  28%
Perimeter
Open Space
-  60%
Research
and
Academic
-   12%

Services

Planned Growth in an Environmentally Sensitive Way

 Rustic hillside landscape - native & non-native vegetation

 Riparian habitat protected

 Filter views with screening trees

  Ornamental landscape areas

Goal of reducing vegetation fire load

Coverage Area for Fire Station 19 at Berkeley Lab Automatic Aid District

 1st Response Area

Impacts Identified in Draft Environmental Impact Report

Significant and unavoidable environmental impacts

- Aesthetics / visual
- Air quality
- Cultural resources
- Construction noise
- Transportation

2006 LRDP Timeline

- Revised Notice of Preparation issued Nov 2003
-

- 2006 Draft LRDP & Draft EIR issued Jan 22, 2007

- Review & Comment Period: Jan 22 – Mar 23

- Berkeley Planning Commission Feb 14

- Draft EIR Public Hearing Feb 26
-

- Seek UC Regents approval July or Sept 2007
