## **NRC INSPECTION MANUAL**

#### INSPECTION PROCEDURE 72509

# POWER ASCENSION PROCEDURE REVIEW: CONTROL ROD DRIVE SYSTEM

#### PROGRAM APPLICABILITY:

#### 72509-01 INSPECTION OBJECTIVES

Ascertain whether the control rod drive system test is consistent with regulatory requirements, guidance, license commitments and technical specifications.

#### 72509-02 INSPECTION REQUIREMENTS

- 02.01 Review the FSAR, Safety Evaluation Report, and docketed letters from the licensee and verify that the testing commitments have been included.
- 02.02 Verify standard procedure review requirements are met as described in Procedure 72300.
- 02.03 Verify that the procedure contains acceptance criteria for the following:
  - a. Rod withdrawal speed
  - b. Mean scram time all rods
  - c. Mean scram time three fastest rods in a 2 x 2 array
  - d. Delta P on CRD friction tests
- 02.04 Verify that initial conditions include:
  - a. Data from previous pre-ops tests are at hand
  - b. Rod indicating system is operating properly
  - c. Each CRD is coupled
  - d. Reactor water level is above the upper grid plate

Issue Date: 07/01/80 - 1 - 72509

02.05 Verify that rod scram tests will be conducted at each power level plateau as defined in the FSAR.

72509 - 2 - Issue Date: 07/01/80

### 72509-03 INSPECTION GUIDANCE

Guidance is provided in RG 1.68, Revision 2, Appendix A, Paragraph 5.h and g (25% power); Appendix B; and Appendix C, Paragraph 4.
