

[Proposed class or classes of copyrighted work(s) to be exempted]= Compact Discs created so that they cannot be copied on to the computer hard drive \*of the person who bought the CD legally\* and, subsequently, an MP3 player \*of the person who bought the CD legally.\*

[Brief summary of the argument(s) in support of the exemption proposed above]= 1) People want to be able to listen to CDs that they buy on more compact media players than CD players.

2) Many people prefer smaller media players to CD players not only for convenience, but because auto CD players make cars more susceptible to theft.

3) Just because someone rips a CD to their computer, it doesn't mean they are distributing the file.

4) The music industry should spend money developing technology for files that aren't distributable over the internet rather than creating CDs that can't rip onto harddrives.

5) Making CDs unrippable will lead many people just to download the album instead so they can listen to it on their digital media players.
