

GULF OF MEXICO

The offshore cadastre used in the Gulf of Mexico is based on the North American Datum of 1927. Refer to the appropriate Official Protraction Diagrams.

NORTH ATLANTIC OCEAN

The boundaries of the regular blocks are 4,800 international meters on a side and contain 2,304 hectares. The regular boundaries are defined in terms of X and Y coordinates of the Universal Transverse Mercator Grid System based on the Geodetic Reference System (GRS) 1980 Ellipsoid.

Onshore planimetric base compilation is from NOAA 1:70 000 Digital Shoreline, v18, September, 1994.

The coordinate values appearing on this document were derived using NAD 83/WGS 84.

The State Seaward Boundary, Limit of "8(g) Zone" and along the dividing line between the North Atlantic Ocean and Gulf of Mexico depicted hereon reflect the official federal position for Submerged Lands Act and OCS Lands Act purposes. The areas of the fractional blocks abutting these lines have been determined and are as depicted on the Supplemental Official OCS Block Diagrams (SOBD's). Consult the SOBD's for official descriptions and approval dates.

Copies of these diagrams and other information may be obtained at the appropriate MMS OCS Region, Office of Program Services.
