

China - Establishment of US-China Natural Gas Institute (TA)

This USTDA-funded public-private training initiative will promote enhanced U.S.-China technical and commercial cooperation in the development of China's natural gas sector. The initiative would include information exchange through a set of twelve (12) courses delivered in China by U.S. experts to Chinese energy sector leaders and practitioners, including national policymakers, representatives from Chinese oil and gas companies, regulators and others. The training would cover topics in gas sector technology, regulation, and markets/finance/pricing including production, transport, import, distribution and consumption of natural gas. The initiative also includes an orientation visit to the United States that would showcase U.S. equipment vendors and service providers in the gas industry. Training activities will be designed to support the annual U.S.-China Oil and Gas Industry Forum, facilitate clean energy development and efficiency in China, as well as human capacity building and the transfer of advanced U.S. technology.

USTDA No.: 02-30054C
USTDA Grant: \$433,473.56
Est. Start Date: 9/1/06
Est. Completion Date: 9/30/09
