2006 and Succeeding Crop Years

# UNITED STATES DEPARTMENT OF AGRICULTURE WASHINGTON, D.C. 20250

| FEDERAL CROP INSURANCE HAN                 | NUMBER: 25080   | (11-2005) |  |  |  |
|--|---|-----------|--|--|--|
| SUBJECT:                                   | OPI: Product Development Division                                   |           |  |  |  |
| CORN LOSS ADJUSTMENT<br>STANDARDS HANDBOOK | APPROVED:         DATE:           /S:/ Tim B. Witt         11/30/05 |           |  |  |  |
| 2006 AND SUCCEEDING CROP<br>YEARS          | Deputy Administrator, Research and Development                      |           |  |  |  |

THIS HANDBOOK CONTAINS THE OFFICIAL FCIC-APPROVED LOSS ADJUSTMENT STANDARDS FOR THIS CROP FOR THE 2006 AND SUCCEEDING CROP YEARS. ALL REINSURED COMPANIES WILL UTILIZE THESE STANDARDS FOR BOTH LOSS ADJUSTMENT AND LOSS TRAINING.

#### SUMMARY OF CHANGES/CONTROL CHART

The following list contains significant changes to this handbook, as determined by us. It may not represent all changes made. All changes made to this handbook are applicable regardless of whether or not listed.

Major Changes: See changes or additions in text which have been highlighted. Three stars (\*\*\*) identify where information has been removed.

Changes for Crop Year 2006 (FCIC-25080) issued November 2005:

- A. Page 1, Subsection 2 A: Clarified that the minimum distribution requirements for forms completed by the adjuster and signed by the insured (or insured's authorized representative) for the loss adjustment inspection.
- B. Page 4, Subsection 3 B: Deleted the listed provisions and procedures not applicable to CAT and instructed the adjuster to refer to the CIH and LAM for provisions and procedures not applicable to CAT.
- C. Page 10, Subsection 5 A: Deleted language describing acreage that is cut for silage without a pre-harvest appraisal.
- D. Page 15, Subsection 6 C (3) (e): Deleted "round to nearest five percent".
- E. Page 16, Subsection 6 D (5): Added instructions to use pencil in place of knife to determine maturity line.

#### CORN LOSS ADJUSTMENT STANDARDS HANDBOOK

#### **SUMMARY OF CHANGES/CONTROL CHART (CONTINUED)**

- F Page 31, Subsection 8 D, item 27: Added instruction for the appraisal worksheet on handling freeze damage appraisal adjustments.
- G. Page 41, Subsection 9 B, item 14: Revised to match the current approved standard language.
- H. Page 54, Subsection 9 B, Section I, item M<sub>2</sub>: Added instructions for using the combination test weight factors and instructions for when corn is not stored as shelled corn.
- I. Pages 58 through 60, Subsection 9 B, Section II, production worksheets: Revised to illustrate entry of 1<sup>st</sup> crop / 2<sup>nd</sup> crop codes and to update calculations.
- J. Pages 66 and 67, Subsection 10, **TABLES** C and **D**: Added interpolation examples to show calculations with low number of remaining plants.
- K. Page 68, Subsection 10, **TABLE E**: Added interpolation instructions for percent of production loss not on chart.
- L. Pages 78 and 79, Subsection 10, **TABLE N**: Updated test weight pack factor chart.
- M. Throughout handbook: Made editorial and syntax changes so handbook text tracks with current RMA-approved handbook formatting.

**TABLE OF CONTENTS (Continued)** 

THIS PAGE INTENTIONALLY LEFT BLANK

### 1. INTRODUCTION

# THIS HANDBOOK MUST BE USED IN CONJUNCTION WITH THE LOSS ADJUSTMENT MANUAL (LAM).

This handbook identifies the crop-specific procedural requirements for adjusting Multiple Peril Crop Insurance (MPCI) losses in a uniform and timely manner. These procedures, which include crop appraisal methods and claims completion instructions, supplement the general (not crop-specific) procedures, forms, and manuals for loss adjustment identified in the LAM.

## 2. SPECIAL INSTRUCTIONS

This handbook remains in effect until superseded by reissuance of **either** the entire handbook **or** selected portions (through slipsheets or bulletins). If slipsheets have been issued for a handbook, the original handbook as amended by slipsheet pages shall constitute the handbook. A bulletin can supersede either the original handbook or subsequent slipsheets.

### A. DISTRIBUTION

The following is the minimum distribution of forms completed by the adjuster and signed by the insured (or insured's authorized representative) for the loss adjustment inspection:

One legible copy to the insured. The original and all remaining copies as instructed by the insurance provider.

It is the insurance providers' responsibility to maintain original insurance documents relative to policyholder servicing as designated in their approved plan of operations.

## B. TERMS, ABBREVIATIONS, AND DEFINITIONS

- (1) Terms, abbreviations, and definitions **general** (not crop specific) to loss adjustment are identified in the LAM.
- (2) Terms, abbreviations, and definitions **specific** to corn loss adjustment and this handbook, which are not defined in this section, are defined as they appear in the text.
- (3) Abbreviations:

CAT Catastrophic Risk Protection
CIH Crop Insurance Handbook

**FGIS** Federal Grain Inspection Service

## 3. INSURANCE CONTRACT INFORMATION

The insurance provider is to determine that the insured has complied with all policy provisions of the insurance contract. Crop provisions which are to be considered in this determination include (but are not limited to):

## A. <u>INSURABILITY</u>

- (1) The crop insured will be all the corn in the county for which a premium rate is provided by the county actuarial documents, in which the insured has a share, and:
  - (a) That is planted for harvest either as grain or as silage (Refer to the Coarse Grains Crop Provisions);
  - (b) That is adapted to the area based on days to maturity and is compatible with agronomic and weather conditions in the area;
  - (c) That is yellow dent or white corn, including mixed yellow and white, waxy, or highlysine corn.
- (2) Unless allowed in the Special Provisions or a written agreement, corn is not insurable if it is:
  - (a) Interplanted with another crop, except a mixture of corn and sorghum (grain or forage-type) will be insured as corn silage if the sorghum does not constitute more than twenty percent (20%) of the plants.
  - (b) Planted into an established grass or legume.
  - (c) High-amylose, high-oil, high-protein, flint, flour, Indian, or blue corn, or a variety genetically adapted to provide forage for wildlife or any other open pollinated corn.
    - Refer to the Special Provisions for corn high-oil blends and high protein restrictions to insurability.
  - (d) A variety of corn adapted for silage use only, when the corn is reported for insurance as grain, e.g., TMF (Totally Managed Feedstuffs) corn, etc.
- (3) Any acreage of the insured crop damaged before the final planting date, to the extent that the majority of producers in the area would normally not further care for the crop, must be replanted unless the insurance provider agrees that it is not practical. Refer to the LAM for replanting provision issues. Refer to Section 4 of this handbook for replanting payment procedures.

- (4) <u>Basis of insurance</u>: Generally, if the actuarial documents for the county provides a premium rate for:
  - (a) Grain but not silage, all insurable acreage will be insured, appraised, and adjusted on a grain basis. Corn harvested as silage must be appraised as grain prior to harvest. Failure to obtain a grain appraisal before harvesting the acreage for silage will result in a declaration that such acreage is destroyed without consent and an appraisal of not less than the production guarantee will be assessed for those acres, unless all conditions in subsection 5 A (2) are met.
  - (b) Silage but not grain, all insurable acreage will be insured, appraised, and adjusted on a silage basis. Corn harvested as grain must be appraised as silage prior to harvest. The silage appraisal will be eligible for grain deficiency quality adjustment, as applicable, and will be adjusted for low silage moisture as required. Failure to obtain a silage appraisal before harvesting the acreage for grain will result in a declaration that such acreage is destroyed without consent and an appraisal of not less than the production guarantee will be assessed for those acres.

#### (c) Grain and silage:

- For all insurable acreage which will remain unharvested or is harvested as the type reported on the acreage report, all insurable corn will be insured, appraised and adjusted on the basis shown on the acreage report (exception a silage-only corn variety is insurable only as silage). Normal quality adjustment procedures apply.
  - In counties for which the actuarial documents provides a non-irrigated silage premium rate but not a non-irrigated grain premium rate, if the insured reports acreage for non-irrigated silage but plans to harvest such acreage for grain, the Special Provisions require that silage appraisals be made. Failure to obtain a silage appraisal before harvesting the acreage for grain will result in a declaration that such acreage is put to other use without consent and an appraisal of at least the production guarantee will be assessed for those acres.
  - <u>b</u> The production may be corrected to standard moisture (harvested and appraised silage is adjusted up to at least 65 percent moisture if the normal silage harvesting period for the area (as determined by the insurance provider) has ended, or for any acreage harvested as silage or appraised as silage after September 30 of the crop year (unless a different date is indicated in the Special Provisions of Insurance), while grain is adjusted down to 15.0 percent moisture).
  - <u>c</u> Unharvested production (that will remain unharvested) is adjusted appropriately for the type reported on the acreage report.
- 2 APH yields are to reflect the reported type.

- <u>3</u> Acreage reports are not to be revised to change corn types after the final acreage reporting date.
- 4 Corn planted for silage which produces few or no ears due to UNINSURED causes (i.e., growing season length requirements longer than that normally available in the area, varieties genetically selected to not produce grain, etc.) is NOT eligible for adjustment for grain deficiency.

Refer to the Special Provisions for additional information.

# B. PROVISIONS AND PROCEDURES NOT APPLICABLE TO CAT COVERAGE

\*\*\* Refer to the CIH and LAM for provisions and procedures not applicable to CAT.

## C. UNIT DIVISION

Refer to the insurance contract for unit provisions. Unless limited by the Crop or Special Provisions, a basic unit, as defined in the Basic Provisions, may be divided into optional units if, for each optional unit, all the conditions stated in the applicable provisions are met.

## D. QUALITY ADJUSTMENT

- (1) Refer to the LAM for information on speculative type contract prices in quality adjustment. THE QUALITY ADJUSTMENT FACTOR CANNOT BE GREATER THAN 1.000 or less than zero (.000).
- (2) Corn production will be eligible for quality adjustment if, (a) deficiencies in quality (due to insurable causes of loss), in accordance with the Official United States Standards for Grain, result in corn not meeting the grade requirements for U.S. No. 4 (grades U.S. No. 5 or worse) because of test weight or kernel damage (excluding heat damage) or having a musty, sour, or commercially objectionable foreign odor, or (b) substances or conditions are present that are identified by the Food and Drug Administration or other public health organization of the United States as being injurious to human or animal health.
- (3) Refer to the LAM for instructions on who can obtain samples for grading, and who can make determinations of deficiencies, conditions, and substances that would cause the crop to qualify for quality adjustment.
- (4) The adjuster must refer to the Special Provisions if production is eligible for quality adjustment as identified in the Coarse Grains Crop Provisions.

- (5) When due to insurable cause(s), use of quality adjustment for corn is handled by determining the appropriate discount factors from the Special Provisions, summing them together, if applicable, and subtracting from 1.000 to obtain the applicable Quality Adjustment Factor (percent of production to count). Refer to the Special Provisions for chart discount factors, instructions for calculating non-chart discount factors, and other discounts allowed. Also, refer to the LAM for examples and guidance in determining reduction in values (RIV's) to determine non-chart discount factors.
- (6) Moisture adjustment is applied prior to applying any qualifying quality adjustment factors such as test weight, kernel damage, etc. A corn moisture adjustment chart is in **TABLE M**. Moisture adjustment results in a reduction in production to count of 0.12 percent for each 0.1 percent moisture in excess of 15 percent through 30 percent and 0.2 percent reduction for each 0.1 percent above 30 percent.
- (7) If a local market cannot be found for the damaged corn, refer to the LAM.
- (8) Refer to the LAM for special instructions regarding mycotoxin infected grain (quality adjustment is not allowed for corn silage).
- (9) Document quality adjustment information as described in the instruction for the "Narrative" section of the claim form (subsection 9 B), or on a Special Report.
- (10) For additional quality adjustment definitions, instructions, sampling requirements, graders, qualifications, and testing requirements; refer to the LAM and the Official United States Standards for Grain.

#### E. CALCULATING QUANTITY OF CORN SILAGE – REFER TO WARNING BELOW!

<u>WARNING</u>: THERE IS DANGER OF GASES IN TIGHTLY CONSTRUCTED SILOS. The insurance provider shall establish methods to be used, depending on the TYPE OF STRUCTURE INVOLVED.

Quantity of silage in storage is calculated by determining the volume, in cubic feet, occupied by the silage, correcting for packing depth (sample weight factor) and test weight per cubic foot. The silage test weight corrects the gross weight to reflect the individual character of the silage (fineness of chop, moisture, leaf percent, ear percent, etc.). **TABLES I and J** provide the gross weight of silage in upright silos according to diameter and depth. For other structures:

- (1) Determine volume, in cubic feet, occupied by the silage.
- (2) Multiply the volume, in cubic feet, by the silage weight factor, then divide by 2000 to determine tons.
- (3) Silage factors are determined as follows:
  - (a) For PACKED silage such as that in a trench, bunker or mechanically packed piles, use the factor of 40 POUNDS per cubic foot.

- (b) For UNPACKED, UNSETTLED silage in round structures, use the tonnage recorded for depth from **TABLE J**. If only part of the unmeasured silage has been stored for two weeks in the structure, defer measurement until all silage in the structure has been undisturbed for at least two weeks. Item (c) is then applicable.
- (c) For UNPACKED, SETTLED silage in round structures, use the silage weight factor for the silage depth from **TABLE I**. Silage is to be considered settled if it is of normal silage moisture and the silage has been undisturbed for at least two weeks.
- (d) For FRESH CHOPPED SILAGE not going into storage:
  - 1 Use weight records, if satisfactory weight records were maintained.
  - 2 Use number of loads fed if satisfactory records have been maintained. Determine the cubic foot volume per load and multiply by;
    - <u>a</u> 10 pounds per cubic foot for corn that was under 4 feet tall, drought stricken, or frozen.
    - <u>b</u> 15 pounds per cubic foot for corn that was of uneven height, partially dry or frozen, and contained few ears.
    - <u>c</u> 20 pounds per cubic foot for all other corn.
- (e) For silage stored in a trench, bunker or mechanically packed piles. Determine quantity of silage by multiplying the average width, depth, and length to determine the total cubic feet. Use 40 pounds per cubic foot.

**EXAMPLE:** Trench silage storage with a top width 12.0 ft., bottom width 8.0 ft., depth 8.0 ft., and a length of 50.0 ft.

The gross tonnage of packed silage is: 
$$8.0 \text{ ft.} + 12.0 \text{ ft.} \times 8.0 \text{ ft.} \times 50.0 \text{ ft.} = 4000.0 \text{ cu. ft.}$$

$$\frac{4000.0 \text{ cu. ft. } \times 40 \text{ lb./cu. ft.}}{2000 \text{ lbs./ton}} = 80 \text{ tons}$$

#### **Short Method**

$$8.0 \text{ ft.} + 12.0 \text{ ft.} \times 8.0 \text{ ft.} \times 50.0 \text{ ft.} \times .02 = 80 \text{ tons}$$

$$(40 \text{ lbs./cu. ft.} \div 2000 \text{ lbs./ton} = .02 \text{ tons/cu. ft.})$$

(f) For upright silos containing other production.

**EXAMPLE:** An upright silo has a diameter of 20.0 ft. and a filled depth of 30.0 ft. Prior measurement determined 5.0 ft. of old silage in the silo. The gross tonnage in the silo is 223 tons (from **TABLE J**):

30 ft. total depth (223 tons) -5 ft. depth (old silage) = 25 ft. depth (181 tons new silage)

223 tons - 181 tons = 42 tons production not to count.

Gross production recorded on the claim form could be new silage with a depth of 25-ft. (181 tons) OR old-and-new silage with a depth of 30-ft. (223 tons) with 42 tons listed as production not to count. ACTUAL old silage tonnage will be greater than 42 tons (due to pack) but by listing 42.0 tons, we effectively remove old silage VOLUME from the total silage volume.

Where new silage is stored on premeasured, unpacked new silage (from another unit, etc.), compute gross tonnage using the unpacked silage method. THE ENTIRE SILO WILL BE MEASURED AND THE EARLIER SILAGE WILL BE SHOWN AS PRODUCTION NOT TO COUNT.

- (4) All gross weight silage determinations involving structure measurements will be adjusted by use of a silage test weight factor.
  - (a) If the insured refuses to permit test weight sampling, or it is not possible to determine the test weight, record the test weight factor as "1.00" in item  $M_2$  of the claim form.
  - (b) If the insured chooses to harvest "low moisture" silage, record the test weight factor as "1.00" in item  $M_2$  of the claim form.

Low moisture silage may be adjusted to 65 percent moisture by a factor from **TABLE** K (recorded in item  $L_2$  of the claim form) if the normal silage harvesting period for the area (as determined by the insurance provider) has ended, or for any acreage harvested as silage or appraised as silage after September 30 of the crop year (unless a different date is indicated in the Special Provisions of Insurance).

(c) The actual test weight factor is determined from representative silage samples. It is especially important that freshly chopped silage is representative of the production.

To determine the test weight factor:

Weigh an empty FIVE-gallon bucket. Fill the bucket to slightly more than level with FLUFFED silage (DO NOT PACK). Using a yardstick or similar object, level with zigzag sweeps and weigh the full bucket. Subtract weight of the empty bucket, determine test weight factor from **TABLE H**, and record, to hundredths, in item M<sub>2</sub> of the claim form.

## 4. REPLANTING PAYMENT PROCEDURES

## A. <u>GENERAL INFORMATION</u>

- (1) Replanting payments made on acreage replanted to a practice that was uninsurable as an original planting will require the deduction of the replanting payment for such acreage from the original unit liability. If the unit dollar loss (final claim) is less than the original unit liability minus such replanting payment, the actual indemnity dollar amount will not be affected by the replanting payment. The premium will not be reduced.
- (2) No replanting payment will be made on acreage on which one replanting payment has already been allowed for the crop year.

## B. QUALIFICATIONS FOR REPLANTING PAYMENT

To qualify for replanting payment, the:

- (1) insured crop must be damaged by an insurable cause;
- (2) insurance provider determines that it is practical to replant;
- (3) acres being replanted must have been initially planted on or after the "Earliest Planting" date established by the Special Provisions;
- (4) per acre appraisal (or appraisal plus any appraisals for uninsured causes of loss) must be less than 90 percent of the per acre production guarantee for the acreage the insured intends to replant (refer to Section 5, "Corn Appraisals");
- (5) acreage replanted must be AT LEAST the lesser of 20 acres or 20 percent of the insured **planted** acreage for the unit (as determined on the final planting date or within the late planting period if a late planting period is applicable); (Any acreage planted after the end of the late planting period will not be included when determining if the 20 acres or 20 percent qualification is met. Refer to the LAM); and
- (6) insurance provider has given consent to replant.
- (7) In the Narrative of the claim form or on Special Report, show the appraisal for each field or subfield and the calculations to document that qualifications for a replanting payment have been met.

# C. MAXIMUM REPLANTING PAYMENT

The maximum amount of the replanting payment per acre will be the LESSER OF:

(1) the insured's actual replanting cost;

- (2) the product of multiplying the maximum bushels allowed in the policy (8 bushels for grain, 1 ton for silage) by the insured's price election, times the insured's share in the crop; or
- (3) 20 percent of the production guarantee times applicable price election times the insured's share.

Compute the number of bushels (tons for silage) per acre allowed for a replanting payment by dividing the maximum replanting payment by the price election. Show all calculations in the Narrative of the claim form or on a Special Report.

#### The following illustrate replant examples for grain corn:

#### **EXAMPLE 1**

Owner/operator (100 percent share)

25 acres replanted

Insured's actual cost to replant = \$20.00/acre

Price election = 2.45/bu.

20% of prod. Guar. (100.0 bu. x 20%) = 20.0 bu. x \$2.45 (price election) x 1.000 (share) =\$49.00

8.0 bu. (Maximum bu. allowed in policy) x \$2.45 (price election) x 1.000 (share) = \$19.60

The lesser of \$49.00, \$19.60 and \$20.00 is \$19.60

Actual bushels per acre allowed = 8.0 bu. (\$19.60 ÷ \$2.45)

Enter 8.0 bu. in Section I, "Adjusted Potential" column of the claim form.

#### **EXAMPLE 2**

Landlord/tenant on (50/50 percent share)

No agreement exists that allows the tenant to have the landlords share of the replanting payment 25 acres replanted

Insured's actual cost to replant = \$10.00/acre

Price election = 2.45/bu.

20% of prod. Guar. (100.0 bu. x 20%) = 20.0 bu. x \$2.45 (price election) x .500 (share) = \$24.50 8.0 bu. (Maximum bu. allowed in policy) x \$2.45 (price election) x .500 (share) = \$9.80

The lesser of \$10.00, \$24.50 and \$9.80 is \$9.80

Actual bushels per acre allowed = 4.0 bu. ( $$9.80 \div $2.45$ )

Enter 4.0 bu. in Section I, "Adjusted Potential" column of the claim form if share has been applied or 8.0 bu. if share has yet to be applied. (Follow individual insurance provider guidelines). Indicate in the Narrative if adjusted potential has/has not been reduced for share on claim form according to individual company guidelines.

#### The following illustrate replant examples for corn silage:

#### **EXAMPLE 3**

Owner/operator (100 percent share)

25 acres replanted

Insured's actual cost to replant = \$20.00/acre

Price election = \$16.70/ton

20% of prod. Guar. (15.0 ton x 20%) = 3.0 ton x \$16.70 (price election) x 1.000 (share) = \$50.10 1.0 ton (Maximum tons allowed in the policy) x \$16.70 (price election) x 1.000 (share) = \$16.70 The lesser of \$50.10, \$16.70 and \$20.00 is \$16.70

Actual tons per acre allowed =  $1.0 \text{ ton } (\$16.70 \div \$16.70)$ 

Enter 1.0 ton in Section I, "Adjusted Potential" column of the claim form.

#### **EXAMPLE 4**

Landlord/tenant (50/50 percent share)

No agreement exists that allows the tenant to have the landlords share of the replanting payment 25 acres replanted

Insured's actual cost to replant = \$10.00/acre

Price election = \$16.70/ton

20% prod. Guar.  $(15.0 \text{ tons } x \ 20\%) = 3.0 \text{ ton } x \ $16.70 \text{ (price election)} \ x \ .500 \text{ (share)} = $25.05 \ 1.0 \text{ ton (Maximum tons allowed in policy)} \ x \ $16.70 \text{ (price election)} \ x \ .500 \text{ (share)} = $8.35 \ The lesser of $8.35, $25.05 \text{ and } $10.00 \text{ is } $8.35$ 

Actual tons per acre allowed =  $.5 \text{ ton } (\$8.35 \div \$16.70)$ 

Enter .5 ton in Section I, "Adjusted Potential" column of the claim form if share has been applied or 1.0 ton if share has yet to be applied. (Follow individual insurance provider guidelines). Indicate in the Narrative if adjusted potential has/has not been reduced for share on claim form according to individual company guidelines.

## D. <u>REPLANTING PAYMENT INSPECTIONS</u>

Replanting payment inspections are to be prepared as final inspections on the claim form only when qualifying for a replanting payment. Non-qualifying replanting payment inspections (unless the claim is withdrawn by the insured) are to be handled as preliminary inspections. If qualified for a replanting payment, a Certification Form may be prepared on the initial farm visit. Refer to the LAM.

For replanting payments, in grain and silage counties where both grain and silage types have been reported, the type applicable to the replanted acreage is to be provided by the insured. The adjuster is cautioned to ensure the stated replanting payment acreage for a type does not exceed the reported acreage for the type for the field and unit.

## 5. CORN APPRAISALS

## A. GENERAL INFORMATION

Potential production for all types of inspections will be appraised in accordance with procedures specified in this handbook and the LAM. Appraisals are to be made on the basis of the type (grain or silage) reported on the acreage report.

## B. <u>SELECTING REPRESENTATIVE SAMPLES FOR APPRAISALS</u>

- (1) Determine the minimum number of required samples for a field or subfield by the field size, the average stage of growth, age (size) and general capabilities of the plants, and variability of potential production and plant damage within the field or subfield.
- (2) Split the field into subfields when:
  - (a) variable damage causes the crop potential to appear to be significantly different within the same field; or
  - (b) the insured wishes to destroy a portion of a field.
- (3) Each field or subfield must be appraised separately.
- (4) Take not less than the minimum number (count) of representative samples required in **TABLE A** for each field or subfield.

## C. MEASURING ROW WIDTH FOR SAMPLE SELECTION

Use these instructions for all appraisal methods that require row width determinations.

- (1) Use a measuring tape marked in inches or convert a tape marked in tenths, to inches, to measure row width (refer to the LAM for conversion table).
- (2) Measure across FOUR OR MORE rows, from the center of the first row **space** to the center of the fifth row **space** (or as many rows as needed), and divide the result by the number of rows measured across, to determine an average row width.

#### **EXAMPLE:**

- (3) Where rows are skipped for tractor and planter tires, refer to the LAM.
- (4) When two or more rows are used for a pattern, divide the length of a single row pattern by the number of rows in the pattern. The combined length of all rows must equal the single row length.
- (5) Apply average row width in **TABLE B** to determine the factor required for the sample row.

## D. STAGES OF GROWTH

Corn growth stages identify the time interval to next stage in relation to appraisal methods.

- (1) Actual leaf count is used to determine stages of growth from emergence to tasseling.
  - (a) Starting with the rounded tip leaf, count all leaves developed up to, and including, the stage indicator leaf. The stage indicator leaf is that leaf which is 40 to 50 percent exposed. It is usually the uppermost leaf that is pointing below a horizontal line.
  - (b) If the rounded tip leaf cannot be determined, the node identification system will be used as follows (refer to **EXHIBIT 2, Figure A**):
    - <u>1</u> Pull up the entire plant and carefully split stalk to expose stalk nodes and root whorls.
    - The FIFTH leaf attaches to the top of the first noticeable elongation between the stalk nodes (an internode).
    - <u>3</u> After the fifth leaf node is identified, count upward to the stage indicator leaf.
    - In the early stages of the plant's development, the internodes are very compact and, therefore, difficult to distinguish. By stage seven or eight, the internode elongation should be easily found.
- (2) Ear development is used to determine stage of growth from tassel to maturity (100 percent stage).
- (3) Stage Definitions. The definitions listed in **EXHIBIT 1** are based on normal or average conditions in the Corn Belt Area for 120-day or full season corn. There are approximately 7 days from planting to emergence, and 21 days from emergence to the 7<sup>th</sup> leaf stage.

# 6. APPRAISAL METHODS

## A. **GENERAL INFORMATION**

These instructions provide information on appraisal methods for:

| Appraisal Method            | Use   |  |  |  |  |  |
|-----------------------------|---|--|--|--|--|--|
| Stand Reduction Method      | for planted acreage with no emerged seed, and from emergence through the milk stage.                                  |  |  |  |  |  |
| Hail Damage Method          | for hail damaged corn beginning with the 7 <sup>th</sup> lead stage and until the corn reaches the milk stage.        |  |  |  |  |  |
| Maturity Line Weight Method | from the milk stage until kernel moisture drops below 40 percent.   |  |  |  |  |  |
| Weight Method               | for all corn appraisals after the corn kernels are physiologically mature and kernel moisture drops below 40 percent. |  |  |  |  |  |

## B. STAND REDUCTION METHOD

- (1) Use for all appraisals from emergence to the milk stage (stand reduction appraisals for hail damage begin with the 7<sup>th</sup> leaf stage). This method is based on the number of surviving plants in a designated sample row length.
- (2) If the reduction in stand is partly due to non-emerged seed due to insufficient soil moisture, do not complete appraisals prior to the time specified in the LAM. Refer to the paragraph in the LAM regarding deferred appraisals and non-emerged seed.
  - (a) Surviving plant counts at the time of appraisal are converted to bushels or tons per acre by multiplying the percent of potential remaining by the base yield. Base yield is the appropriate verified yield for the acreage from the APH form.
  - (b) Prior to the 11<sup>th</sup> leaf stage, the "Stand Reduction Chart" is used to determine the percent of potential remaining (**TABLE C**).
  - (c) In the 11<sup>th</sup> leaf stage to the milk stage, the yield and stand reductions are on a one-to-one ratio. (Example: 80 percent stand = 80 percent potential.)
  - (d) Samples size is 1/100 acre.

### C. HAIL DAMAGE METHOD

(1) Use for hail-damaged corn appraisals beginning with the 7<sup>th</sup> leaf stage and until the corn reaches the milk stage. This method is based on the calculation of direct and indirect damage from hail to determine percent of potential remaining, converted to a bushel or ton-per-acre appraisal.

For damage due to hail, inspections shall be delayed 7 to 10 days after damage for a more accurate damage assessment.

(2) Direct damage includes loss from stand reduction, crippled plants, and damage to the ear and stalk.

#### (a) Stand Reduction:

- Prior to the 11<sup>th</sup> leaf stage, the "Hail Stand Reduction Loss" (**TABLE D**) is used to determine percent of damage due to stand reduction.
- Beginning with the  $11^{th}$  leaf stage, stand reduction and yield are on a one-to-one ratio. (Example: 80 percent stand = 80 percent potential).

### (b) Crippled Plants:

- Cripples are plants which grow to approximately normal height or less but do not produce a normal, harvestable ear. Naturally barren stalks should not be counted as cripples.
- Crippled plants must be individually evaluated to determine their contribution to potential yield. CRIPPLES ARE NOT COUNTED AS TOTALLY DESTROYED PLANTS. For example, in a particular sample it may take three ears from crippled plants to make an average ear (3-for-1). If 30 cripples were counted out of 100 remaining plants and evaluated on a 3-for-1 basis (.67 factor, since 2 of every 3 plants are considered damaged), the gross cripple damage would be 20 percent (.67 x 30).

#### (c) Ear Damage:

Ear damage is determined by comparing the number of damaged kernels to the number of total kernels, in a sample of all ears from 10 consecutive representative plants.

#### (d) Stalk Damage:

Plants having bruises on the stalk should not be counted as destroyed until such time as they actually fall over and become unharvestable. Young bruised plants usually will produce a normal (or near normal) ear. When considerable bruising is evident, the adjustment should be deferred until the actual loss can be determined.

- (3) Indirect damage is caused by defoliation (the loss of leaf area) due to hail. To determine defoliation or leaf destruction:
  - (a) select representative plants;
  - (b) remove the leaves which were exposed at the time of damage;
  - (c) determine the percent of leaf area destroyed (missing or brown areas) for each leaf;
  - (d) total the percentages; and
  - (e) divide by the number of leaves to determine the average percent. Apply the percent to the Leaf Loss table, **TABLE E**.
- (4) Stage Modification Procedure:

Plant stages may not be accurate for leaf area determination when short season (short statured) field varieties which produce less than 19-21 actual leaves in a season are appraised. The stages used for defoliation determination are modified to reflect this lower potential leaf area. Determine the ultimate number of leaves to be produced by tearing the plant down. After the stage indicator leaf has been identified, dissect the plant and count the nodes or leaves not yet emerged to determine the ultimate number.

- (a) If the actual number of leaves to be produced cannot be determined, defer the appraisal until the actual number of leaves can be determined. AT THE TIME OF DEFERRAL, ACCURATELY DETERMINE PERCENT OF DEFOLIATION AS OF DATE OF LOSS.
- (b) When the actual leaves to be produced can be determined, refer to **TABLE F**, to obtain the modified stage for use with the Leaf Loss table (**TABLE E**).

No further determination of defoliation should be made at the time of a later inspection unless further damage occurs.

## D. MATURITY LINE WEIGHT METHOD

- (1) Use for all grain appraisals from the milk stage until kernel moisture drops below 40 percent. If at all possible, defer appraisal to the weight method.
  - (a) Select representative samples of:
    - $\underline{1}$  1/100 acre if potential appears to be 20 bushels per acre or less.
    - 2 1/1000 acre if potential appears to be in excess of 20 bushels per acre.
- (2) This method is based on weighing ear samples which are grouped according to maturity and converting this production to bushels per acre.

- (3) The stage of maturity is established by determining where the line separating the solids and the liquid is located in the grain kernel. The solids start to form at the end opposite the kernel tip. The five stages of maturity and the number of pounds of immature ear corn required to make a bushel of mature shelled corn are as illustrated in **EXHIBIT 2**, **Figure C**.
- (4) Pick and husk all harvestable ears in the sample area. Discard portions of ears without kernels.
- (5) Break the ears in half and with the exposed kernels on the stem end of the cob, use a pencil to determine which quarter of the kernel the maturity (solids) line is located. To locate the maturity line, apply moderate pressure at the top of the kernel and draw the pencil toward the bottom of the kernel. Place both parts of each ear in an appropriate stage pile to determine the stage weights. In most samples, the ears will be in only two stages. (Refer to **EXHIBIT 2, Figure C**.)
- (6) Use the appropriate factor on the appraisal worksheet for converting the stage weight to bushels per acre of mature potential production.

## E. WEIGHT METHOD

- (1) Use for all corn grain appraisals after the corn kernels are physiologically mature (some kernels have developed the black or brown abscission layer in the kernel tip, signifying the end of dry matter accumulation) and kernel moisture drops **below 40 percent**.)
  - (a) This method is based on weighing the ears in a fraction of an acre, then converting this production to bushels per acre.
  - (b) Select representative samples of:
    - 1 1/100 acre if potential appears to be 20 bushels per acre or less.
    - 2 1/1000 acre if potential appears to be in excess of 20 bushels per acre.
  - (c) Pick and husk all harvestable ears in the sample area. Weigh production.
  - (d) Multiply average sample weight by:
    - $\underline{1}$  1.43 if sample size selected was 1/100 acre.
    - 2 14.3 if sample size selected was 1/1000 acre.
      - The results will be the bushels-per-acre of potential production (not corrected for moisture, test weight, etc.).
  - (e) Determine shelling percentage factor for ear corn as follows:
    - Select and husk a **five**-pound representative ear corn sample, shell, and weigh grain.

- <u>2</u> Divide the weight of the shelled corn by 4 and round to two decimal places; or
- <u>3</u> Determine in accordance with **TABLE G**.

Shelling percent (and shelling factor) is ONLY applicable to corn in the EAR such as weight-method appraisals (or stored as ear corn). The standard shelling percent assumes 70 lbs. per bushel of ear corn equals 56 lbs. per bushel of shelled corn (80 percent shell, 100 percent shelling factor). If the corn is already shelled, no shelling percent or shelling factor is used.

### F. TONNAGE METHOD OF APPRAISING SILAGE

- (1) Use for silage appraisals of field corn from the milk stage to maturity when silage is indicated as the basis of insurance on the acreage report and silage production will not be determinable later. Refer to Section G, below, to determine when to make silage appraisals.
  - (a) This method is based on weighing the production in a fraction of an acre, then converting this production to tons per acre.
  - (b) Select representative samples of:
    - $\underline{1}$  1/2000 acre if the stand is uniform and high tonnage is expected.
    - 2 1/1000 acre for other silage.
  - (c) Measure all production in the sample area by cutting the stalks at normal machine harvesting height for silage, and weighing.
  - (d) Multiply average sample weight by:
    - $\underline{1}$  1.0 if sample size selected was 1/2000 acre.
    - 2 0.5 if sample size selected was 1/1000 acre.

The result will be tons per acre of potential production.

- (e) For silage appraisals made after the normal time of harvest or after September 30, determine the tonnage appraisal and convert to equivalent tons of 65 percent moisture silage, utilizing factors from **TABLE K**.
- (f) Concurrent grain and silage appraisals or grain appraisals from representative sample areas for fields otherwise harvested for silage MUST be used if adjustments to production are to be allowed for GRAIN DEFICIENT SILAGE. If, due to insurable causes, the silage contains less than 4.5 bushels of grain per ton of silage, apply the appropriate factor from **TABLE L**. Adjustment for grain-deficient silage is allowed ONLY FOR CORN INSURED AS SILAGE (including corn appraised as silage and the silage tonnage will not be determinable later) with grain production based upon maturity-line or weight-method appraisals, as appropriate.

# G. <u>DETERMINING WHETHER TO MAKE CORN GRAIN OR SILAGE</u> <u>APPRAISALS</u>.

- (1) The acreage report will be the primary tool for determining when to appraise as grain or silage. The crop will be appraised on the basis of type reported on the acreage report. Refer to the Special Provisions for additional guidance.
- (2) In a "grain and silage" county, if a pre-harvest release of acreage to another use is required, the insured must designate which areas within the unit were planted for grain and which were planted for silage. The adjuster is cautioned to ensure the stated acreage for a type does not exceed the reported acreage for the type for the field and unit.

# 7. APPRAISAL DEVIATIONS AND MODIFICATIONS

## A. <u>DEVIATIONS</u>

Deviations in appraisal methods require FCIC written authorization (as described in the LAM) prior to implementation.

## B. MODIFICATIONS

Modifications in appraisal methods require insurance provider authorization (as described in the LAM).

When applicable, with the insurance provider approval, use the following instructions in conjunction with the appropriate appraisal methods for damage due to insurable causes.

(1) No Pollination Due To Drought, Heat, Hot Winds, And/Or Insects:

Appraise corn insured as grain as "0" (for the actual acreage so affected) if, after a general survey of the crop, the adjuster finds:

- (a) Ear shoots, and the pollination period:
  - 1 Has ended. Blisters on the cob are enlarged (wart-like); or
  - 2 Is in progress. Blisters on the cob are not enlarged, and all the silk has been eaten below the husk by insects.
- (b) No ear shoots, and the pollination period:
  - 1 Is in progress or has ended; or
  - Has not begun. The tassel is exposed and the still unexposed ear bud is less than 2 inches in length.

#### (2) Poor Pollination Due To Drought, Heat, Hot Winds, And/Or Insects:

Appraise corn insured as grain based upon stand reduction ONLY if the appraisal cannot be deferred. After normal silking to milk stage, stalks with partial pollination are considered surviving plants but only to the extent they contribute to the production of a normal 1/2 pound ear of corn, i.e., if 3 ears are required to produce the grain equivalent of one normal ear, count only 1/3 of such plants. Barren stalks are not counted as surviving. Individually evaluate ears to determine total surviving plants to be entered on the appraisal worksheet. Document adjustment in the "Notes and Calculation Section" of the stand reduction appraisal worksheet or on an attached Special Report.

#### (3) Severely Drought-Stunted Corn:

Defer the appraisal until the milk stage, at which time the maturity line method or tonnage method may be used. The appraisal method must agree with the type reported on the acreage report. If the insured does not wish to leave representative sample areas for this appraisal or it is impractical to do so, use the stand reduction method.

#### (4) Permanently Wilted Corn:

Note on appraisal worksheet "no production potential due to permanent wilt" and enter a zero appraisal for the affected acres. For acreage with no or minimal damage due to permanent wilt, but wilt conditions have been determined to be in the area, appraise in the normal manner unless the insured agrees to leave representative sample areas for later appraisal. Inform insured to request another appraisal within 30 days of this inspection.

Permanent wilt is caused by extremely dry soil conditions and can occur at any immature stage of growth. It is a condition where plants are stressed from lack of moisture to the extent that all leaves remain tightly rolled throughout the night. Lower plant leaves become dry and brittle and will crumble when rolled between the hands. Permanently wilted plants are damaged to the extent that they will die even if supplied moisture.

#### (5) Irregular Germination or Crop Development Due To Insured Causes:

Use the stand reduction method of appraisal based upon the number of plants capable of reaching the milk stage prior to a killing frost.

- (a) Count all plants to determine the plant population and enter in item 11 of the stand reduction appraisal worksheet.
- (b) Determine stage of growth for EARLY-GERMINATING corn and record in item 19.
- (c) Determine the stage of growth for EACH LATE-GERMINATING corn plant and record, in item 23 ("NOTES AND CALCULATIONS" section):
  - 1 The stage of each plant; and

- The computation of the number of days from the current stage to the milk stage for each plant and add FIVE days (the additional five days are to account for slower plant development as the frost date approaches).
- (d) Compute the number of days from the appraisal date to the average killing frost date for the area (contact local State Extension Service) and show calculation in item 23.
- (e) Count and record in item 12 as "surviving," those plants which will reach the milk stage before the average killing frost date (include early-germinated plants).
- (f) The percent of potential (item 15) is equal to the percent of "surviving" plants ("surviving" plant number divided by original plant population).
- (g) Percent of potential (item 15) multiplied by the applicable APH yield (refer to note above) results in the per-acre appraisal.

#### **EXAMPLE:**

Some plants are in the 5<sup>th</sup>, 8<sup>th</sup>, and 10<sup>th</sup> leaf stages. Date of the appraisal is July 24. Frost date is September 25, 63 days from the date of appraisal. Late developing plants which will not reach the milk stage prior to the frost date will not be counted as surviving plants.

Plants in the 10<sup>th</sup> leaf stage will be counted as surviving, since they will reach the milk stage in 60 days (allowing the additional FIVE days for maturity retardation). Plants in the 8<sup>th</sup> leaf and earlier stage would not be counted as surviving, as they would not reach the milk stage prior to the frost date.

| <u>STAGE</u>          | DAYS TO MILK STAGE |
|-----------------------|--------------------|
| 5 <sup>th</sup> leaf  | 75                 |
| 8 <sup>th</sup> leaf  | 66                 |
| 10 <sup>th</sup> leaf | 60                 |

(6) Appraisal Modification for Early Freeze Damage:

WHEN AUTHORIZED BY THE INSURANCE PROVIDER, the maturity line appraisal method may be modified to more closely reflect the actual potential remaining after freeze damage. Apply the following procedure on a case-by-case basis ONLY as circumstances warrant. Document on a Special Report, all pertinent information regarding the loss such as the corn hybrid planted, the maturity rating of the variety, whether the late planting provisions apply, planting (and any replanting) dates, the practicality of any late replanting, the extent of freeze damage to corn in the area (whether general or isolated), date of normal freeze, date(s) of damaging freeze(s), and specifically why the corn did not escape freeze damage. DO NOT APPLY the appraisal modification for early freeze damage if the adjuster determines that the insured could have prevented the damage through proper farming practices. The modification is only applied on corn that is less than fully mature.

Quality adjustment procedures do not apply when using the freeze modification. The stage of corn on the date of final adjustment must be used when applying the modification factors. Do not backstage to the stage at the date of freeze.

The conditions that determine the extent of damage are the maturity of the plant at the time of freeze and the number of leaves killed above the ear-stalk attachment. If the freeze occurs when the maturity line method of appraisal is applicable (except doughy and extended stages), adjustments to the maturity line appraisal are allowed IF ALL the leaves above the base of the ears are killed by the freeze. For:

- (a) \( \frac{1}{4} \) stage count 25 percent of the appraisal.
- (b)  $\frac{1}{2}$  stage count 50 percent of the appraisal.
- (c) 3/4 stage count 75 percent of the appraisal.

The adjustments do not apply if:

- 1 Kernels are in the doughy or extended stage at the time of freeze use normal appraisal.
- Any leaves remain alive above the base of the ear (regardless of stage) use normal appraisal.
- 3 Kernels are in the pre-1/4 stage (leaves are all killed above the base of the ear) ear has no potential. If all ears are in this category, appraise at zero.
- 4 The corn is insured as silage (reported for silage on the Acreage Report). Adjustment can be used if silage is eligible to be adjusted for grain deficiency and meets the above criteria.

For purposes of this appraisal modification, "early freeze damage" refers to a freeze which occurs early enough in the corn's growth stages to cause damage to the developing ears, without regard to its relationship to the calendar date of occurrence. The calendar date of the freeze is important, however, in determining whether the insured could have prevented the damage through proper farming practices.

# 8. APPRAISAL WORKSHEET ENTRIES AND COMPLETION PROCEDURES

# A. GENERAL INFORMATION

(1) Include the insurance provider's name in the appraisal worksheet title if not preprinted on the insurance provider's worksheet, when a worksheet entry is not provided.

- (2) Include the claim number on the appraisal worksheet (when required by the insurance provider), when a worksheet entry is not provided.
- (3) Separate appraisal worksheets are required for each unit appraised, and for each field or subfield, which has a differing base (APH) yield or farming practice (applicable to replant, preliminary, and final claims). Refer to Section 5 for sampling requirements.

Standard appraisal worksheet items are numbered consecutively in subsection B. An example appraisal worksheet is also provided to illustrate how to complete entries.

### B. WORKSHEET ENTRIES AND COMPLETION INFORMATION

#### STAND REDUCTION METHOD

Verify or make the following entries:

#### Item

## No. <u>Information Required</u>

**Company:** Name of insurance provider, if not preprinted on the worksheet (Company Name).

- 1. **Insured's Name:** Name of the insured that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 2. **Policy Number:** Insured's assigned policy number.
- 3. **Unit No.:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g., 00100).

**Claim Number:** Claim number as assigned by the insurance provider.

- 4. **Crop:** "Corn Grn." Or "Corn Sil."
- 5. **Crop Year:** Four-digit crop year, as defined in the policy, for which the claim has been filed.
- 6. **FSA Farm No.:** FSA farm serial number, if applicable.
- 7. **Field No.:** Field or subfield identification symbol.

**No. of Acres:** Number of determined acres, to tenths, in the field or subfield being appraised.

- 8. **Row Width:** Row width to nearest inch. Refer to subsection 5 C for row width determination information.
- 9. **Base Yield:** Enter the approved APH yield to nearest whole bushel or tons to tenths from the APH form, after verifying to be correct.

- 10. **Sample No.:** MAKE NO ENTRY.
- 11. **Normal Plant Population 1/100 acre:** Determine by counting the potential (living, dead, missing, and non-emerged) plants in a length of row equivalent to 1/100 acre.
- 12. **No. of Surviving Plants 1/100 acre:** Number of surviving plants in the same sample.
- 13. **Percent of Stand:** MAKE NO ENTRY.
- 14. **Round Col. 13 to nearest 5 percent:** MAKE NO ENTRY.
- 15. **Percent of Potential:** Enter percent of potential as follows:
  - a. Determine stage of growth at time of damage and enter in item 19.
  - b. Before 11<sup>th</sup> leaf stage, use Stand Reduction (**TABLE C**) and enter percent potential to nearest whole percent, after interpolating.
  - c. In 11<sup>th</sup> leaf stage and beyond, enter result of dividing number of surviving plants (item 12) by normal plant population (item 11) to whole percent.
- 16. **Base Yield:** Repeat entry from item 9.
- 17. **Appraisal for Sample:** Result, to nearest tenth, of multiplying percent of potential (item 15) expressed as a decimal by the base yield (item 16).
- 18. **Total:** Sum of entries in item 17 (to nearest tenth).
- 19. **Stage of Growth at Time of Damage:** Stage of growth at time of damage (refer to Section 5 D).
- 20. **Total Appraisals for all Samples:** Repeat entry from item 18.
- 21. **No. of Samples:** Enter total number of samples.
- 22. **Appraisal per Acre/Field:** Result (to nearest tenth) by dividing total appraisals for all samples (item 20) by the total number of samples (item 21).
- 23. **Notes and Calculations:** Remarks pertinent to the appraisal, sampling, and conditions in general (e.g. very hot and dry), etc.
- Insured's Signature and Date: Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Appraisal Worksheet WITH THE INSURED, particularly explaining codes, etc., which may not be readily understood.

25. **Adjuster's Signature, Code No., and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. If the appraisal is performed prior to signature date, document the date of appraisal in the Remarks section of the Appraisal Worksheet (if available); otherwise, document the appraisal date in the Narrative of the Production Worksheet.

Page: Page numbers – (EXAMPLE: Page 1 of 1, Page 1 of 2, Page 2 of 2, etc.).

## C. WORKSHEET ENTRIES AND COMPLETION INFORMATION

#### HAIL DAMAGE METHOD

#### Verify or make the following entries:

#### **Item**

#### **No.** Information Required

**Company:** Name of insurance provider, if not preprinted on the worksheet (Company Name).

**Claim No.:** Claim number as assigned by the insurance provider.

- 1. **Insured's Name:** Name of the insured that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 2. **Policy No.:** Insured's assigned policy number.
- 3. **Unit Number:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g., 00100).
- 4. **Crop:** "Corn Grn." Or "Corn Sil."
- 5. **Crop Year:** Four-digit crop year, as defined in the policy, for which the claim is filed.
- 6. **FSA Farm No.:** FSA Farm Serial Number, if applicable.
- 7. **Field No.:** Field or subfield identification symbol.
- 8. **Ultimate No. of Leaves:** MAKE NO ENTRY.
- 9. **Base Yield:** The approved yield, in whole bushels or tons to tenths, from the APH form after verifying to be correct.
- 10. **Sample No.:** MAKE NO ENTRY.
- 11. **Normal No. of Plants 1/100 acre:** Normal plant population (original stand) determine by counting the potential (living, dead, missing or non-emerged) plants in a length of row equivalent to 1/100 acre.
- 12. **No. Plants Totally Destroyed 1/100 acre:** Number of plants totally destroyed. If totally destroyed plants cannot be accurately counted, complete item 13 and enter result of subtracting remaining stand (item 13) from normal number of plants (item 11).
- 13. **Remaining Stand No. Plants 1/100 acre:** Determine the number of remaining plants or enter the result of subtracting number of plants totally destroyed (item 12) from normal number of plants (item 11).

- 14. **% Damage from Stand Reduction (TABLE C):** Determine and enter percent of damage (to whole percent).
  - a. From 7<sup>th</sup> through 10<sup>th</sup> leaf stages, use "Hail Stand Reduction Loss" (**TABLE D**) based on entries in items 11 (normal number of plants) and item 13 (remaining stand). Interpolate to nearest whole percent.
  - b. After 10<sup>th</sup> leaf stage, divide number of plants totally destroyed (item 12) by normal number of plants (item 11), round to nearest whole percent.
- 15. **% Cripples (Corn Only):** Determine entry as follows (refer to sample on worksheet for calculations and Section 6 C (2) (b) for definition):
  - a. Count the number of cripples in 100 remaining live plants.
  - b. Individually evaluate the ears on the crippled plants to determine the GROSS damage from cripples. (Percent of cripples which will not produce a normal harvestable ear.) Multiply number of cripples (a) by percent of cripples (b).
  - c. Multiply this Gross percent times the remaining crop (100 percent damage from stand reduction (item 14)) to obtain the NET percent of damage. Round to nearest tenth.

#### 16. **% Ear Damage (Corn):**

- a. If no ear damage MAKE NO ENTRY.
- b. If ear damage:
  - (1) Select all ears from 10 consecutive representative plants.
  - (2) Determine the total number of kernels on all ears.
  - (3) Determine the total number of damaged kernels on sample ears. The GROSS percent of ear damage is determined by dividing the total number of kernels damaged by the total number of kernels.
  - (4) Determine NET percent of ear damage by multiplying the gross percent times the remaining crop (100 percent damage from stand reduction (item 14) percent cripples (item 15) and enter the results in item 16).
- 17. **Total Direct Damage:** Sum of items 14, 15 and 16.
- 18. **Potential Remaining:** Result of subtracting total direct damage (item 17) from 100.
- 19. **% Leaf Area Destroyed:** Determine and enter percent of leaf area destroyed.

- 20. **% Damage for Leaf Destruction:** Percent of damage for leaf destruction based on **TABLE E**, percent leaf area destroyed (items 19) and stage of plant (item 27), to nearest tenth percent. Refer to Subsection 6 C (3).
- 21. **Net Indirect Damage:** Result (to tenths) of multiplying potential remaining (item 18) by percent damage for leaf destruction (item 20).
- 22. **% Damage from Hail:** Sum of total direct damage (item 17) and net indirect damage (item 21), to nearest tenth.
- 23. **% Potential Production Remaining:** Result of subtracting percent damage from hail (item 22) from 100 (to nearest tenth).
- 24. **Base Yield:** Repeat entry from item 9.
- 25. **Appraisal For Sample:** Result, to nearest tenth, of multiplying percent potential production remaining (item 23) expressed as a decimal by the base yield (item 24).
- 26. **Total:** Sum of entries in item 25.
- 27. **Stage of Plant Growth at Time of Damage:** Stage of growth at time of damage.
- 28. **Total All Samples:** Repeat entry from item 26.
- 29. **No. Samples:** Enter total number of samples.
- 30. **Per Acre Appraisal Bu.:** Result, to nearest tenth, of dividing total appraisals for all samples (item 28) by the total number of samples (item 29).
- 31. **Remarks:** Remarks pertinent to the appraisal, sampling, conditions in general (e.g. very hot and dry), etc.
- 32. **Insured's Signature and Date:** Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Appraisal Worksheet WITH THE INSURED, particularly explaining codes, etc., which may not be readily understood.
- 33. **Adjuster's Signature, Code No., and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. If the appraisal is performed prior to the signature date, document the date of appraisal in the Remarks/Narrative section of the Appraisal Worksheet (if available); otherwise, document the appraisal date in the Narrative of the Production Worksheet.

# D. WORKSHEET ENTRIES AND COMPLETION INFORMATION

#### MATURITY LINE WEIGHT METHOD

Complete HEADING items 1 through 7, and PART II items 20 through 32.

### Verify or make the following entries:

#### Item

#### No. Information Required

**Company:** Name of insurance provider, if not preprinted on the worksheet (Company Name).

**Claim Number:** Claim number as assigned by the insurance provider.

- 1. **Insured's Name:** Name of person that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 2. **Policy No.:** Insured's assigned policy number.
- 3. **Unit No.:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g. 00100).
- 4. **Crop:** "Corn Grn."
- 5. **Crop Yr.:** Four-digit crop year as defined in the policy for which the claim has been filed.
- 6. **FSA Farm No.:** FSA farm serial number.
- 7. Circle Appraisal Code and enter in col. 10 part 1: Circle "EC" for ear corn.
- 8-19 MAKE NO ENTRY.

### **PART II – MATURITY LINE WEIGHT METHOD** (from milk stage to 40 percent grain moisture).

- 20. **Field ID:** Field or subfield identification symbol
- 21. **Acreage in Field to tenths:** Number of determined acres, to tenths, in field or subfield being appraised.
- 22. **Stage:** MAKE NO ENTRY.
- 23. **Fraction of Acre:** Use "1/100," if potential appears to be 20 bushels per acre or less, or "1/1000," if potential appears to be in excess of 20 bushels or more per acre.

- Weight by Stage: Pound weight, to tenths, for each sample by stage of maturity. Determine weights by:
  - (1) Picking and husking all harvestable ears from the sample.
  - (2) Discarding portions of ears having no kernels.
  - (3) Determining maturity line of each ear in order to determine its stage.
  - (4) Sorting ears by stage and weighing all ears in stage (pounds to tenths).
- 25. **Total Weight All Sample Plots:** Total of sample weights from all sample plots for that stage (to tenths).
- 26. **Yield Factor:** Use appropriate factor for fraction of an acre used.
- 27. **Appraisal Per Stage:** Result of multiplying Total Weight All Sample Plots (item 25) by appropriate yield factor (item 26), rounded to tenths.

For appraisal modifications for early freeze damage, multiply the result of appraisal per stage by the appropriate freeze damage appraisal adjustment, rounded to tenths and make a notation of adjustment in the remarks section of the appraisal worksheet. Refer to section 7 B (6).

- 28. **Total Appr. All Stages:** Sum of entries in item 27 (Appraisal Per Stage), to tenths.
- 29. **Total No. Rep. Sample Plots:** Number of sample plots.
- 30. **Acre Appraisal:** Result of dividing Total Appraisals All Stages (item 28) by number of Total Number of Representative Sample Plots (item 29).

**Remarks:** Remarks pertinent to the appraisal, sampling, conditions in general (e.g. – very hot and dry), etc.

- 31. **Insured's Signature and Date:** Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Appraisal Worksheet WITH THE INSURED, particularly explaining codes, etc., which may not be readily understood.
- 32. **Adjuster's Signature, Code No., and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. If the appraisal is performed prior to signature date, document the date of appraisal in the Remarks section of the Appraisal Worksheet (if available); otherwise, document the appraisal date in the Narrative of the Production Worksheet.

Page: Page numbers – (EXAMPLE: Page 1 of 1, Page 1 of 2, Page 2 of 2, etc).

# E. WORKSHEET ENTRIES AND COMPLETION INFORMATION

#### **WEIGHT METHOD**

Complete heading, items 1 through 7, Part I items 8 through 19, and Part II items 31 and 32.

## Verify or make the following entries:

#### Item

## No. <u>Information Required</u>

**Company:** Name of insurance provider, if not preprinted on the worksheet (Company Name).

**Claim Number:** Claim number as assigned by the insurance provider.

- 1. **Insured's Name:** Name of person that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 2. **Policy No.:** Insured's assigned policy number.
- 3. **Unit No.:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g., 00100).
- 4. **Crop:** "Corn Grn."
- 5. **Crop Yr.:** Four-digit crop year as defined in the policy for which the claim has been filed.
- 6. **FSA Farm No.:** FSA farm serial number.
- 7. **Circle Appraisal Code and enter in Col. 10 Part 1:** Circle "EC" and enter in item 10, Part I.

#### **PART I – WEIGHT METHOD**

Use this method for corn for grain when grain moisture is 40 percent or below, through maturity.

- 8. **Field ID:** Field or subfield identification symbol
- 9. **Acres in Field:** Number of determined acres, to tenths, in field or subfield being appraised.
- 10. **Kind of Appr.:** Enter "EC."
- 11. **Fraction of Acre:** Enter "1/100," if potential appears to be less than 20 bushels per acre. Enter "1/1000," if potential appears to be 20 bushels or more per acre.
- 12. **Weight per Sample:** Weight for each sample (pounds, to tenths).

- 13. **Total Weight All Sample Plots:** Sum of entries in item 12 (pounds, to tenths).
- 14. **No. of Sample Plots:** Number of sample plots.
- 15. **Avg. Sample Weight per Field:** Result, to tenths, of dividing total weight of all samples (item 13) by the number of sample plots (item 14).
- 16. **Yield Factor:** If entry in item 11 is 1/100, enter "1.43." If entry in item 11 is 1/1000, enter "14.3."
- 17. **Per Acre Yield:** Result, to tenths, of multiplying average sample weight per field (item 15) by the yield factor (item 16). Circle appropriate unit of measure.
- 18. **Moisture:** Record moisture percentage, if in excess of 15.0 (through 40) percent, rounded to tenths.
- 19. **Shelling:** Shelling percentage factor (to whole percent). Refer to **TABLE G**.
- Insured's Signature and Date: Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Appraisal Worksheet WITH THE INSURED, particularly explaining codes, etc., which may not be readily understood.
- 32. **Adjuster's Signature, Code No. and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. If the appraisal is performed prior to signature date, document the date of appraisal in the Remarks section of the Appraisal Worksheet (if available); otherwise, document the appraisal date in the Narrative of the Production Worksheet.

Page: Page numbers – (EXAMPLE: Page 1 of 1, Page 1 of 2, Page 2 of 2, etc.).

# F. WORKSHEET ENTRIES AND COMPLETION INFORMATION

#### **CORN TONNAGE METHOD**

Complete heading, items 1 through 7, Part I, items 8 through 19, and Part II items 31 and 32.

## Verify or make the following entries:

#### **Item**

## No. <u>Information Required</u>

**Company:** Name of insurance provider, if not preprinted on the worksheet. (Company Name)

**Claim Number:** Claim number as assigned by the insurance provider.

- 1. **Insured's Name:** Name of person that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 2. **Policy No.:** Insured's assigned policy number.
- 3. **Unit No.:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g., 00100).
- 4. **Crop:** "Corn Sil."
- 5. **Crop Year:** Four-digit crop year as defined in the policy for which the claim has been filed.
- 6. **FSA Farm No.:** FSA farm serial number.
- 7. **Circle Appraisal Code and enter in Col 10 Part 1:** Circle "EC" and enter in item 10, Part I.

#### PART I – WEIGHT METHOD

Use this method for corn for silage (tonnage) from milk stage through maturity.

- 8. **Field ID:** Field or subfield identification symbol.
- 9. **Acres in Field:** Acreage (to tenths) in field identified by item 8.
- 10. Kind of Appr.: "CS."
- 11. **Fraction of Acre:** Enter "1/1000." If the stand is uniform across the field and tonnage is expected to be high, enter "1/2000."

- 12. **Weight per Sample:** Weight for each sample (pounds, to tenths).
- 13. **Total Weight for All Samples:** Sum of entries in item 12 (pounds, to tenths).
- 14. **No. of Sample Plots:** Number of sample plots.
- 15. **Average Sample Weight per Field:** Result of dividing total weight of all samples (item 13) by the number of sample plots (item 14), rounded to tenths.
- 16. **Yield Factor:** If the entry for fraction of acre (item 11) is "1/2000," enter "1.00;" if entry for fraction of acre (item 11) is "1/1000," enter ".5."
- 17. **Per Acre Yield:** Result of multiplying average sample weight (item 15) by yield factor (item 16), rounded to tenths. Circle appropriate unit of measure.

For grain-deficient silage (less than 4.5 bushels per ton based on grain appraisal of the standing crop), apply the appropriate factor from **TABLE L**. No reduction for grain deficiency is to be made if a grain appraisal cannot be made prior to harvest or a representative unharvested sample is not left in accordance with the policy provisions. Corn planted for harvest as silage which produces few or no ears due to uninsurable causes (i.e., growing season requirements which are longer than that normally available for the area, corn genetically selected to not produce grain, etc.) is not eligible for adjustment due to grain deficiency.

- 18. **Moisture:** Use only when silage moisture must be corrected silage moisture percent (to tenths).
- 19. **Shelling:** MAKE NO ENTRY.

**Remarks:** Remarks pertinent to the appraisal, sampling, conditions in general (e.g. – very hot and dry), etc.

- Insured's Signature and Date: Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Appraisal Worksheet WITH THE INSURED, particularly explaining codes, etc., which may not be readily understood
- 32. **Adjuster's Signature, Code No. and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. If the appraisal is performed prior to signature date, document the date of appraisal in the Remarks section of the Appraisal Worksheet (if available); otherwise, document the appraisal date in the Narrative of the Production Worksheet.

# 9. CLAIM FORM ENTRIES AND COMPLETION PROCEDURES

## A. GENERAL INFORMATION

- (1) The claim form (hereafter referred to as "Production Worksheet") is a progressive form containing all notices of damage for all preliminary, replant, and final inspections on a unit.
- (2) If a Production Worksheet has been prepared on a prior inspection, verify each entry and enter additional information as needed. If a change or correction is necessary, strike out all entries on the line and re-enter correct entries on a new line. The adjuster and insured should initial any line deletions.
- (3) Refer to the LAM for instructions regarding the following:
  - (a) Acreage report errors;
  - (b) Delayed notices and delayed claims;
  - (c) Corrected claims or fire losses (double coverage) and cases involving uninsured causes of loss, unusual situations, controversial claims, concealment, or misrepresentation;
  - (d) Claims involving a Certification Form (when all the acreage on the unit has been appraised to be put to another use, when acreage is being appraised for a replanting payment and all acreage on the unit has been initially planted, or other reasons described in the LAM);
  - (e) "No Indemnity Due" claims (which must be verified by an APPRAISAL or NOTIFICATION from the insured that the production exceeded the guarantee); and
  - (f) Late planting.
- (4) Refer to the Prevented Planting Handbook for information on prevented planting.
- (5) The adjuster is responsible for determining if the insured has complied with all of their requirements under the notice and claim provisions of the policy. If they have not, the adjuster should contact the insurance provider.
- (6) Instructions labeled "**PRELIMINARY**" apply to preliminary inspections only. Instructions labeled "**REPLANT**" apply to replant inspections only. Instructions labeled "**FINAL**" apply to final inspections only. Instructions not labeled apply to ALL inspections.

# B. FORM ENTRIES AND COMPLETION INFORMATION

Verify or make the following entries:

#### **Item**

# No. <u>Information Required</u>

- 1. **Crop/Code #:** "Corn" (0041).
- 2. **Unit #:** Five-digit unit number from the Summary of Coverage after it is verified to be correct (e.g., 00100).
- 3. **Legal Description:** Section, township, and range number or other legal description that identifies the location of the unit.
- 4. **Date of Damage:** First three letters of the month during which MOST of the insured damage (including progressive damage) occurred for each inspection. Include the SPECIFIC DATE where applicable as in the case of hail damage (e.g., AUG 11).
- 5. **Cause of Damage:** Name of insured cause(s) of loss for **this crop** as listed in the LAM. If it is evident that no indemnity is due, enter "NONE." If an insured cause of loss is coded as "Other," explain in the "Narrative."

Refer to the Basic Provisions and the crop provisions for this crop for information pertaining to insured and uninsured causes of loss.

6. **Primary Cause %:** 

**PRELIMINARY:** MAKE NO ENTRY.

**REPLANT AND FINAL:** Percent of damage for the cause of damage listed in item 5 above that is determined to be the primary cause of damage, to the nearest whole percent. The primary cause of damage must exceed 50 percent (e.g., 51%). Enter an "X" for the major secondary cause of damage.

- 7. **Company/Agency:** Name of company and agency servicing the contract.
- 8. **Name of Insured:** Name of the insured that identifies EXACTLY the person (legal entity) to whom the policy is issued.
- 9. **Claim #:** Claim number as assigned by the insurance provider.
- 10. **Policy #:** Insured's assigned policy number.
- 11. **Crop Year:** Four-digit crop year, as defined in the policy, for which the claim is filed.

#### 12. Additional Units:

#### PRELIMINARY AND REPLANT: MAKE NO ENTRY.

**FINAL:** Unit number(s) for ALL non-loss units for the crop at the time of final inspection. A non-loss unit is any unit for which a Production Worksheet has not been completed. Additional non-loss units may be entered on a single Production Worksheet.

If more spaces are needed for non-loss units, enter the unit numbers, identified as "Non-Loss Units," in the Narrative or on an attached Special Report.

#### 13. Est. Prod. Per Acre:

#### **PRELIMINARY AND REPLANT:** MAKE NO ENTRY.

**FINAL:** Estimated yield per acre, in whole bushels or tons to tenths, of all non-loss units for the crop at the time of final inspection.

## 14. **Date(s) Notice of Loss:**

#### **PRELIMINARY:**

- a. Date the first or second notice of damage or loss was given for the unit in item 2, in the 1<sup>st</sup> or 2<sup>nd</sup> space, as applicable. Enter the complete date (MM, DD, and YYYY) for each notice.
- b. A notice of damage or loss for a third preliminary inspection (if needed) requires an additional set of Production Worksheets. Enter the date of notice for a third preliminary inspection in the 1st space of item 14 on the second set of Production Worksheets.
- c. Reserve the "Final" space on the first page of the first set of Production Worksheets for the date of notice for the final inspection.
- d. If the inspection is initiated by the insurance provider, enter "Company Insp." instead of the date.
- e. If the notice does not require an inspection, document as directed in the Narrative instructions.

**REPLANT AND FINAL:** Transfer the latest date (in the 1st or 2nd space from the first or second set of Production Worksheets) to the FINAL space on the first page of the first set of Production Worksheets) if a final inspection should be made as a result of the notice. Always enter the complete date of notice (MM, DD, and YYYY) for the FINAL inspection in the FINAL space on the first page of the first set of Production Worksheets. For a delayed notice of loss or delayed claim, refer to the LAM.

## 15. **Companion Policy(s):**

- a. If no other person has a share in the unit (insured has 100 percent share), MAKE NO ENTRY.
- b. In all cases where the insured has LESS than a 100 percent share of a loss-affected unit, ask the insured if the OTHER person sharing in the unit has a multiple-peril crop insurance contract (i.e., not crop-hail, fire, etc.). If the other person does not, enter "NONE."
  - (1) If the other person has a multiple-peril crop insurance contract and it can be determined that the SAME insurance provider services it, enter the contract number. Handle these companion policies according to insurance provider instructions.
  - (2) If the OTHER person has a multiple-peril crop insurance contract and a DIFFERENT insurance provider or agent services it, enter the name of the insurance provider and/or agent (and contract number) if known.
  - (3) If unable to verify the existence of a companion contract, enter "Unknown" and contact the insurance provider for further instructions.

Refer to the LAM for further information regarding companion contracts.

## SECTION I – ACREAGE APPRAISED, PRODUCTION AND ADJUSTMENTS

Make separate line entries for varying:

- (1) Rate classes, types, or farming practices;
- (2) APH yields;
- (3) Appraisals;
- (4) Adjustments to appraised mature production (moisture and/or quality adjustment factors):
- (5) Stages or intended use(s) of acreage;
- (6) Shares (e.g., 50 percent and 75 percent shares on the same unit); or
- (7) Appraisals for damage due to hail or fire if Hail and Fire Exclusion is in effect.

#### Verify or make the following entries:

#### Item

### No. <u>Information Required</u>

A. **Field ID:** The field identification symbol from a sketch map or an aerial photo. Refer to the Narrative. In the margin (or in a separate column), enter the date of inspection for the last line entry of each inspection.

Where acreage is PARTLY replanted, omit the field ID symbol for the fields that have not been replanted and that have been consolidated into a single line entry.

# REFER TO THE LAM FOR INSTRUCTIONS REGARDING ENTRIES OF FIRST CROP AND SECOND CROP CODES.

#### B. **Preliminary Acres:**

**PRELIMINARY:** The number of acres, to tenths, (include "E" if estimated), for which consent for other use has been given. Determine actual acreage, to tenths, when the boundaries of the appraised acreage may not be determined later.

#### **REPLANT AND FINAL:** MAKE NO ENTRY.

C. **Final Acres:** Refer to the LAM for definition of acceptable determined acres used herein.

Determined acres to tenths (include "E" if estimated) for which consent is given for other use and/or:

- a. Put to other use without consent.
- b. Abandoned.
- c. Damaged by uninsured causes.
- d. For which the insured failed to provide acceptable records of production.

**REPLANT:** Determine the total acres, to tenths, of replanted acreage (DO NOT ESTIMATE). Make a separate line entry for any PART of a field or subfield NOT replanted.

- a. Determine the planted acreage of any fields or subfield NOT replanted. Consolidate it into a single line entry UNLESS the usual reasons for separate line entries apply. Record the field or subfield identities (from a map or aerial photo) in the Narrative.
- b. ACCOUNT FOR ALL PLANTED ACREAGE IN THE UNIT.

**FINAL:** Determined acres to tenths.

Acreage breakdowns WITHIN a unit may be estimated (enter "E" in front of the acres) if a determination is impractical AND if authorization was received from the insurance provider. Document authorization in the Narrative.

ACCOUNT FOR ALL ACREAGE IN THE UNIT. In the event of over-reported acres, handle in accordance with individual insurance provider's instructions. In the event of under-reported acres, draw a diagonal line in Column "C" as shown.

- C<sub>1</sub> Enter the ACTUAL acres for the field or subfield.
- C<sub>2</sub> Enter the REPORTED acres for the field or subfield.

D. **Interest or Share:** Insured's interest in the crop to three decimal places as determined at the time of inspection. If shares vary on the same UNIT, use separate line entries.

- E. **Risk:** Three-digit code for the correct "Rate Class" specified on the actuarial documents. If a "Rate Class" or "High Risk Area" is not specified on the actuarial documents, make no entry. Verify with the Summary of Coverage and if the Rate Class is found to be incorrect, revise according to the insurance provider's instructions. Refer to the LAM. Unrated land is uninsurable without a written agreement.
- F. **Practice:** Three-digit code number entered exactly as specified on the actuarial documents, for the practice carried out by the insured. If "No Practice Specified," enter appropriate 3-digit code number from the actuarial documents.
- G. **Type/Class/Variety:** Three-digit code number entered exactly as specified on the actuarial documents, for the type grown by the insured. If "No Type Specified," enter appropriate 3-digit code number from the actuarial documents.
- H. Stage:

**PRELIMINARY: MAKE NO ENTRY.** 

**REPLANT:** Replant stage abbreviation as shown below.

## **STAGE EXPLANATION**

"R" . . . . . . . . . . . . Acreage replanted and qualifying for replanting payment.

"NR"..... Acreage not replanted or not qualifying for a replanting payment.

Enter "NR" if the combined potential production appraisal and
uninsured cause appraisal totals 90 percent or more of the guarantee
for replanting claims.

**FINAL:** Stage abbreviation as shown below.

## **STAGE EXPLANATION**

"P"..... Acreage abandoned without consent, put to other use without consent, damaged solely by uninsured causes, or for which the insured failed to provide records of production which are acceptable to the insurance provider.

"H"..... Harvested for grain if insured for grain or harvested as silage if insured for silage.

There will be no "H" entries for appraisals.

"UH"..... Unharvested or put to other use with consent.

PREVENTED PLANTING: Refer to the Prevented Planting Handbook for proper codes for any eligible prevented planting acreage.

## **GLEANED ACREAGE:** Refer to the LAM for information on gleaning.

I. **Intended or Final Use**: Use of acreage. Use the following "Intended Use" abbreviations.

## <u>USE</u> <u>EXPLANATION</u>

"Replant"..... Acreage replanted and qualifying for replanting payment

"Not Replanted".... Acreage not replanted or not qualifying for a replanting payment

"To Millet," etc. . . . Use made of the acreage "WOC"..... Other use without consent

"SU"..... Solely uninsured

"ABA"..... Abandoned without consent

"H"..... Harvested "UH"..... Unharvested

"HM/G"..... High moisture grain

"S"..... Appraised silage going into a sealed upright silo.

**EXAMPLE:** Corn insured as grain but requiring a grain appraisal because it is going into high moisture storage would have "UH" entered in Section I, item H under "Stage" and "HM/G" entered in Section I, item I under "Intended Use." Verify any "Intended Use" entry. If the final use of the acreage was not as indicated, strike out the original line and initial it. Enter all data on a new line showing the correct "Final Use."

PREVENTED PLANTING: Refer to the Prevented Planting Handbook for proper codes for any eligible prevented planting acreage.

**GLEANED ACREAGE:** Refer to the LAM for information on gleaning.

### J. Appraised Potential:

**REPLANT:** MAKE NO ENTRY. (Enter the replant appraisal in the Narrative. Refer to Section 4.)

**PRELIMINARY AND FINAL:** Per-acre appraisal in bushels or tons to tenths, of POTENTIAL production for the acreage appraised. Refer to Section 5, "Corn Appraisals" for additional instructions.

If there is no potential on UH acreage, enter "0."

#### $K_1$ Moisture %:

**REPLANT:** MAKE NO ENTRY.

**PRELIMINARY AND FINAL:** Moisture percent (if in excess of 15.0 percent) to nearest tenth. Moisture adjustment is applied prior to applying any qualifying adjustment for quality.

#### $K_2$ Factor:

**REPLANT:** MAKE NO ENTRY.

**PRELIMINARY AND FINAL:** Moisture factor – For appraised mature grain production in excess of 15.0 percent, obtain factor from **TABLE M.** 

## L. Shell and/or Quality Factor:

**REPLANT:** MAKE NO ENTRY.

**PRELIMINARY AND FINAL:** If a Weight Method appraisal is made in bushels, enter:

- a. The shelling percentage factor rounded to a two-place decimal (refer to **TABLE G**).
- b. For Weight Method appraisals (for mature unharvested grain corn) which due to insurable causes qualify for quality adjustment as provided in the Coarse Grains Crop Provisions, enter the Quality Adjustment factor (three place decimal) calculated in accordance with the Quality Adjustment Statements in the Special Provisions. If appraised mature corn has no value enter ".000." For additional quality adjustment definitions, instructions, qualifications and testing requirements, refer to the LAM and the Official United States Standards for Grain. Also, refer to the quality adjustment instructions in the "Narrative," herein.

If both the shell factor and quality factor apply, multiply the shelling factor times the quality factor to three decimal places and enter.

#### M. + Uninsured Cause:

**REPLANT:** MAKE NO ENTRY.

PRELIMINARY AND FINAL: EXPLAIN IN THE NARRATIVE.

- a. Hail and Fire exclusion NOT in effect.
  - (1) Enter NOT LESS than the insured's production guarantee per acre in bushels or tons, to tenths, for the line, (calculated by multiplying the elected coverage level percentage times the approved APH yield per acre shown on the APH form) for any "P" stage acreage.
    - On preliminary inspections, advise the insured to keep the harvested production from any acreage damaged SOLELY by uninsured causes separate from other production.
  - (2) For acreage that is damaged PARTLY by uninsured causes, enter the APPRAISED UNINSURED loss of production per acre in bushels or tons, to tenths, for any such acreage.

- b. When there is late-planted acreage, the applicable per-acre production guarantee for such acreage is the production guarantee that has been reduced for late-planted acreage.
- c. Refer to the LAM when a Hail and Fire Exclusion is in effect and damage is from hail or fire.
- d. Enter the result of adding uninsured cause appraisals to hail and fire exclusion appraisals.

For fire losses, if the insured also has other fire insurance (double coverage), refer to the LAM.

## N. **Adjusted Potential:**

**REPLANT:** Enter the bushels or tons per acre allowed for replanting. (Refer to Section 4 for qualifications and computations.)

**PRELIMINARY AND FINAL:** Column "J" times Column "K<sub>2</sub>" times Column "L" plus Column "M."

- O. **Total to Count:** Column "C or C<sub>1</sub>" (actual acres) times Column "N," rounded to tenths.
- P. **Per Acre:** Per Acre Guarantee Enter the per acre production guarantee from the insured's policy. Refer to the LAM for late planting procedures.
- Q. **Total:** Column "C<sub>2</sub>" (**reported** acres; "C" if acreage is not under-reported) times Column "P," to tenths.

The following instructions apply if the insurance provider has given instructions for a one page production worksheet for corn insured as grain and silage within the same unit. Draw a horizontal line in Column "Q." Tons will be totaled and entered in upper part of box and bushels will be totaled and entered in the lower part of box.

#### 16. **Total Acres:**

**PRELIMINARY: MAKE NO ENTRY.** 

**REPLANT and FINAL:** Total Actual Acres [Column "C" or ("C<sub>1</sub>"if there are underreported acres)], to tenths.

FOR ITEM 17. WHEN SEPARATE LINE ENTRIES ARE MADE FOR VARYING SHARES, STAGES, APH YIELDS, PRICE ELECTIONS, TYPES, ETC., WITHIN THE UNIT, AND TOTALS NEED TO BE KEPT SEPARATE FOR CALCULATING INDEMNITIES, MAKE NO ENTRY AND FOLLOW THE INSURANCE PROVIDER'S INSTRUCTIONS; OTHERWISE, MAKE THE FOLLOWING ENTRIES.

#### 17. **Totals:**

**PRELIMINARY:** MAKE NO ENTRY.

**REPLANT and FINAL:** Total of Column "O" and total of Column "Q."

The following instructions apply if the Insurance Provider has given instructions for a one page production worksheet for corn insured as grain and silage within the same unit. Draw a horizontal line in item 17. Tons will be totaled and entered in upper part of box and bushels will be totaled and entered in the lower part of box.

#### **NARRATIVE:**

If more space is needed, document on a Special Report, and enter "See Special Report." Attach the Special Report to the Production Worksheet.

- a. If no acreage is released on the unit, enter "No acreage released," adjuster's initials, and date.
- b. If notice of damage was given and "No Inspection" is necessary, enter the unit number(s), "No Inspection," date, and adjuster's initials. The insured's signature is not required.
- c. Explain any uninsured causes, unusual, or controversial cases.
- d. If there is an appraisal in Section I, Column "M" for uninsured causes due to a hail/fire exclusion, show the original hail/fire liability per acre and the hail/fire indemnity per acre.
- e. Document the actual appraisal date if an appraisal was performed prior to the adjuster's signature date on the appraisal worksheet, and the date of the appraisal is not recorded on the appraisal worksheet.
- f. State that there is "No other fire insurance" when fire damages or destroys the insured crop and it is determined that the insured has no other fire insurance. Also refer to the LAM.
- g. Explain any errors found on the Summary of Coverage.
- h. Explain any commingled production. Refer to the LAM.
- i. Explain any entry for "Production Not to Count" and/or any production not included in Section II, Column "I" or Columns "B" through "E" entries (e.g., harvested production from uninsured acreage that can be identified separately from the insured acreage in the unit).
- j. Explain a "NO" checked in item 19.
- k. Attach a sketch map or aerial photo to identify the total unit:
  - (1) If consent is or has been given to put part of the unit to another use or to replant;
  - (2) If acreage has been replanted to a practice uninsurable as an original practice;

- (3) If uninsured causes are present; or
- (4) For unusual or controversial cases.

Indicate on the sketch map or aerial photo, the disposition of acreage destroyed or put to other use with or without consent.

- 1. Explain any difference between date of inspection and signature dates. For an ABSENTEE insured, enter the date of the inspection AND the date of mailing the Production Worksheet for signature.
- m. When any other adjuster or supervisor accompanied the adjuster on the inspection, enter the code number of the other adjuster or supervisor and date of inspection.
- n. Explain the reason for a "No Indemnity Due" claim. "No Indemnity Due" claims are to be distributed in accordance with the insurance provider's instructions.
- o. Explain any delayed notices or delayed claims as instructed in the LAM.
- p. Document any authorized estimated acres shown in Section I, Column "C" as follows: "Line 3 'E' acres authorized by insurance provider MM/DD/YYYY."
- q. Document the method and calculation used to determine acres for the unit. Refer to the LAM.
- r. Specify the type of insects or disease when the insured cause of damage or loss is listed as insects or disease. Explain why control measures did not work.
- s. Document the appraisal (plus appraisal for uninsured causes of loss, if applicable) for replanted acreage, and the calculations to show that the qualification for a replanting payment have been met. Refer to Section 4.
- t. If any acreage to be replanted in the unit does not qualify for a replanting payment, enter Field No., "NOT QUAL FOR RP PAYMENT," date of inspection, adjuster's initials, and reason not qualified.
- u. Explain any ".000" quality adjustment (QA) factor entered in Section I, Column "L" and Section II, Column "R." Explain any deficiencies, substances, or conditions that are allowed for quality adjustment, as well as any which were not allowed. Also enter the RIV's and Local Market Price used in establishing the QA factor for mature appraised production. Document any excess transportation costs or conditioning costs used to determine the QA factor.
- v. Document field ID's and date and method of destruction of mycotoxin-infested corn if they have no market value. For further documentation instructions, refer to the LAM.
- w. Document the name and address of the charitable organization when gleaned acreage is applicable. Refer to the LAM for more information on gleaning.

- x. Document any other pertinent information, including any data to support any factors used to calculate the production.
- y. Explain harvested tonnage silage calculations, identifying the silage as packed, unpacked settled, unpacked unsettled, fresh chopped, etc., to validate calculations.
- z. Specify in the Narrative when separate production worksheets are used for (each) grain and silage within a unit.

#### SECTION II – HARVESTED PRODUCTION

#### GENERAL INFORMATION:

- (1) Account for ALL HARVESTED PRODUCTION (for **ALL ENTITIES** sharing in the crop) except production appraised BEFORE harvest and shown in Section I because the quantity cannot be determined later (e.g., high moisture grain going into air-tight storage, released for other uses, etc.). If possible, use silage appraisals rather than harvest production derived from structure measurements. Tonnage determinations based on volume vary widely due to varying pack, settling with time, moisture content, and coarseness of chop.
- (2) Columns "B" through "E" are for structure measurement entries (Rectangular, Round, Square, **Conical Pile**, etc.). If structures are a combination of shapes, break into a series of average measurements, if possible. Enter "Odd Shape" if production is stored in an odd shaped structure. Document measurements on a Special Report or other worksheet used for this purpose.
- (3) If farm-stored production has been weighed prior to storage and acceptable weight tickets are available showing gross weights, enter "Weighed and Stored On Farm" in Columns "B" through "E." Refer to the LAM for acceptable weight tickets. Convert weighed ear corn to a shelled corn basis before entering production in item I (divide ear corn weight by 70 to get grain bushels to enter in item I, and make usual entries for shelled corn).
- (4) For production commercially stored, sold, etc., make entries in Columns "B" through "E" as follows:
  - (a) Name and address of storage facility or buyer.
  - (b) "Seed," "Fed," etc.
- (5) There will be no "harvested production" entries for replanting payments.
- (6) If acceptable sales or weight tickets are not available, refer to the LAM.
- (7) If additional lines are necessary, the data may be entered on a continuation sheet. USE SEPARATE LINES FOR:

- (a) Separate storage structures.
- (b) Varying names and addresses of buyers of sold production.
- (c) Varying determinations of production (varying moisture, foreign material (FM), test weight, value, etc.). Average percent of FM or moisture can be entered when the elevator has calculated the average on the summary sheet, and the determined average is acceptable to the adjuster. Separate line entries are not otherwise required. Refer to the LAM for instructions.
- (d) Varying shares; e.g., 50 percent and 75 percent shares on same unit.
- (e) Production from first (original) or second (substitute) crop acreage when a second crop will be or is planted on the first crop acreage within the same crop year.
- (f) Conical piles. Do **NOT** add the cone in the top or bottom of a bin to the height of other grain in the structure. For computing the production in cones and conical piles, refer to the LAM.
- (8) There will generally be no harvested production entries in Columns "A" through "S" for preliminary inspections.
- (9) If there is harvested production from more than one insured practice (or type) and a separate approved APH yield has been established for each, the harvested production also must be entered on separate lines in Columns "A" through "S" by type or practice. If production has been commingled, refer to the LAM.

#### Verify or make the following entries:

#### Item

## **No.** Information Required

18. Date Harvest Completed: (Used to determine if there is a delayed notice or a delayed claim. Refer the LAM.)

**PRELIMINARY:** MAKE NO ENTRY.

### **REPLANT AND FINAL:**

- a. The earlier of the date the ENTIRE acreage on the unit was (1) harvested, (2) totally destroyed, (3) put to other use, (4) a combination of harvested, destroyed, or put to other use, or (5) the calendar date for the end of the insurance period.
- b. If at the time of final inspection (if prior to the end of the insurance period), there is any unharvested insured acreage remaining on the unit that the insured does not intend to harvest, enter "**Incomplete**."

- c. If at the time of final inspection (if prior to the end of the insurance period), **none** of the insured acreage on the unit has been harvested, and the insured does not intend to harvest such acreage, enter "**No Harvest**."
- d. If the case involves a Certification Form, enter the date from the Certification Form when the entire unit is put to another use, replanting is complete for the unit, etc. Refer to the LAM.

#### 19. **Similar Damage:**

**PRELIMINARY:** MAKE NO ENTRY.

**REPLANT AND FINAL:** Check "Yes" or "No." Check "Yes" if amount and cause of damage due to insurable causes is similar to the experience of other farms in the area. If "No" is checked, explain in the Narrative.

- 20. **Assignment of Indemnity:** Check "Yes" **only** if an assignment of indemnity is in effect for the crop year; otherwise, check "No." Refer to the LAM.
- 21. **Transfer of Right to Indemnity:** Check "Yes" **only** if a transfer of right to indemnity is in effect for the unit for the crop year; otherwise, check "No." Refer to the LAM.
- A<sub>1</sub>. **Share:** RECORD ONLY VARYING SHARES on SAME unit to three decimal places.

#### $A_2$ . Field ID:

- a. If only one practice and/or type of harvested production is listed in Section I, MAKE NO ENTRY.
- b. If more than one practice and/or type of harvested production is listed in Section I, and a separate approved APH yield exists, indicate for each practice/type the corresponding Field ID (from Section I, Column "A.")

# REFER TO THE LAM FOR INSTRUCTIONS REGARDING ENTRIES OF FIRST CROP AND SECOND CROP CODES.

- B. **Length or Diameter:** Internal measurement in feet to tenths of structural space occupied by crop.
  - a. Length if rectangular or square.
  - b. Diameter if round or conical pile. Refer to the LAM to convert circumference to diameter if internal diameter measurement is not possible.
- C. **Width:** Internal width measurement in feet to tenths of space occupied by crop in structure if rectangular or square. If round, enter "RND." If conical pile, enter "Cone."

- D. **Depth:** Depth measurement in feet to tenths of space occupied by crop in rectangular, round, or square structure. If conical pile, enter the height of the cone. If there is production in the storage structure from other units or sources, refer to the LAM.
- E. **Deduction:** Cubic feet, to tenths, of crop space displaced by chutes, vents, studs, crossties, etc. Refer to the LAM for computation instructions.
- F. **Net Cubic Feet:** Net cubic feet of crop in the storage structure. Refer to the LAM for computation instructions.
- G. **Conversion Factor:** Enter Conversion Factor as follows:

| Corn (Shelled)        | 0.8   |
|-----------------------|-------|
| Corn (Ear)            | .0.4  |
| Corn (Ground Shelled) | . 0.7 |
| Corn (Ground Ear)     | .0.6  |

- H. **Gross Prod.:** Multiply Column "F" times Column "G," rounded to tenths of a bushel for grain or ton for silage.
- I. **Bu., Ton, Lbs., Cwt.:** Circle "Bu." for grain or "ton" for silage. Grain production in bushels, to tenths, before deductions for grain moisture and foreign material or silage in tons, to tenths, before deduction for grain deficiency or increase due to low silage moisture, for production:
  - a. Weighed and stored on the farm.
  - b. Sold and/or stored in commercial storage Obtain gross production for the UNIT from the summary and/or settlement sheets. (Individual load slips only WILL NOT suffice unless the storage facility or buyer WILL NOT provide summary and/or settlement sheets to the insured, and this is documented in the Narrative.)
  - c. Stored in odd-shaped structures. The adjuster must compute the amount of gross production. (Refer to the LAM for cubic footage and production computations). A copy of ALL production calculations must be left in the file folder.
  - d. **SILAGE -** Refer to Subsection 3E to determine quantity of corn silage.

For mycotoxin-infected corn, enter ALL production even if it has no market value.

J. **Shell/Sugar Factor:** Enter the shelling percentage factor for ear corn. Refer to Subsection 6 E (1) (e).

**SILAGE - MAKE NO ENTRY.** 

K<sub>1</sub>. **FM %:** Make entry to nearest tenth. Refer to the LAM for instructions.

Refer to the LAM for FGIS definition of "FM."

**SILAGE - MAKE NO ENTRY.** 

**Factor:** Enter the three-place factor determined by subtracting the percent of FM from 1.000, or subtract the entry in K<sub>1</sub> from 100 and divide by 100. **EXAMPLE:** For 4 percent, enter ".960."

**SILAGE** – MAKE NO ENTRY.

- L<sub>1.</sub> **Moisture %:** Enter moisture percent to tenths. Moisture adjustment is applied prior to applying any qualifying quality adjustment for quality.
- **Factor:** If grain moisture is more than 15.0 percent, enter the four-place moisture factor from the corn moisture adjustment factors (**TABLE M**).
  - **SILAGE** If silage moisture is below 65 percent, enter the two-place factor from the silage moisture factors in **TABLE K**, (it is applied prior to any adjustment for quality).
- M<sub>1.</sub> **Test Wt.:** Enter test weight (ONLY when storage structure measurements are entered) in whole pounds (or pounds to tenths IF so instructed by the insurance provider). Refer to the LAM for instructions on determining test weight.
- Factor: Combination Test Weight Factor For shelled corn, enter the factor from (TABLE N) for the square footage of floor space in the storage structure. Refer to the LAM for instructions on calculating floor space of a structure. Combination test weight pack factors are applicable only to shelled corn and not to ear corn, cracked corn, or ground corn. For ear corn, cracked corn, and ground corn (Refer to the LAM for standard test weights) enter the result of dividing the actual test weight by the standard test weight (ear corn must be shelled for sample), to three decimal places.

If the Insurance Provider instructs test weights to be entered to the nearest tenth, use the nearest ½ pound test weight value on the combination test weight pack factor chart.

For test weights not shown on the chart, multiply the actual test weight by the last available combination test weight pack factor for the appropriate bin size and divide the result by the last available test weight shown on the chart.

#### EXAMPLE FOR TEST WEIGHT NOT SHOWN ON THE CHART:

Corn with a test weight of 65 pounds stored in a less than 255 Sq. Ft. bin 65 (actual test weight) x 1.164 (last available factor) ÷ 64 (last available test weight) = 1.182

Refer to the LAM for other test weights. For corn silage divide the actual test weight by 12.0. Refer to subsection 3 E for silage test weight determination instructions.

- N. **Adjusted Production:** Result of multiplying ("H" or "I") x "K<sub>2</sub>" x "L<sub>2</sub>" x "M<sub>2</sub>." (Round to nearest tenth).
- O. **Prod. Not to Count:** Net production NOT to count, in bushels to tenths, WHEN ACCEPTABLE RECORDS IDENTIFYING SUCH PRODUCTION ARE AVAILABLE, from harvested acreage which has been assessed an appraisal of not less than the guarantee per acre, or from other sources (e.g., other units or uninsured acreage) in the same storage structure (if the storage entries include such production).

THIS ENTRY MUST NEVER EXCEED PRODUCTION SHOWN ON THE SAME LINE. EXPLAIN THE TOTAL BIN CONTENTS (bin grain depth, etc.) AND ANY "PRODUCTION NOT TO COUNT" IN THE NARRATIVE.

Make no entry if only the depth for production to count has been entered in Column D, and the depth for production not to count has been entered in the "Narrative" section. Refer to the example in the LAM.

- P. **Production:** Result of subtracting the entry in Column "O" from Column "N," to tenths.
- Q<sub>1.</sub> **Value:** When applicable, enter the Reduction in Value (RIV). RIV must be limited to amounts that are usual, customary, and reasonable. (Refer to the Special Provisions and the LAM for further instructions.)

DO NOT make an entry when the Quality Adjustment factor can be obtained from the charts in the Special Provisions.

Q<sub>2</sub>. **MKT. Price:** If an entry is in Column "Q<sub>1</sub>," enter the Local Market Price for U.S. Grade No. 2 corn (refer to the crop provisions). Refer to the LAM for further instructions.

DO NOT make an entry when the Quality Adjustment factor can be obtained from the charts in the Special Provisions.

R. **Quality Factor:** For production eligible for quality adjustment, enter the 3-digit quality adjustment factor determined by subtracting the result of "Q<sub>1</sub>" divided by "Q<sub>2</sub>" from 1.000, **or 1.000 minus the discount factor(s) obtained from the Special Provisions.** 

**Silage:** For corn insured as silage which due to insurable causes, qualifies for quality adjustment for grain deficiency (as documented by a standing-corn grain appraisal), enter the two-place decimal from **TABLE L.** 

S. **Production to Count:** Enter result from multiplying Column "P" times Column "R" in bushels or tons to tenths.

FOR ITEMS 22 – 24. WHEN SEPARATE LINE ENTRIES ARE MADE FOR VARYING SHARES, STAGES, APH YIELDS, PRICE ELECTIONS, TYPES, ETC., WITHIN THE UNIT, AND TOTALS NEED TO BE KEPT SEPARATE FOR CALCULATING INDEMNITIES, MAKE NO ENTRY AND FOLLOW THE INSURANCE PROVIDER'S INSTRUCTIONS; OTHERWISE, MAKE THE FOLLOWING ENTRIES.

#### 22. **Section II Total:**

#### PRELIMINARY AND REPLANT: MAKE NO ENTRY.

**FINAL:** Total of Column "S," to tenths.

The following instructions apply if the insurance provider has given instructions for a one page production worksheet for corn insured as grain and silage within the same unit. Draw a horizontal line in Item 22. Tons, to tenths, will be totaled from Column "S" and entered in upper part of box and bushels, to tenths, will be totaled and entered in the lower part of box.

#### 23. **Section I Total:**

#### PRELIMINARY AND REPLANT: MAKE NO ENTRY.

**FINAL:** Enter figure from Section I, Column "O" total.

The following instructions apply if the insurance provider has given instructions for a one page production worksheet for corn insured as grain and silage within the same unit. Draw a horizontal line in Item 23. Tons, to tenths, from Section I, Column "O" total will be entered in upper part of box and bushels, to tenths, will be entered in the lower part of box.

#### 24. Unit Total:

#### PRELIMINARY AND REPLANT: MAKE NO ENTRY.

**FINAL:** Total of 22 and 23, to tenths.

The following instructions apply if the insurance provider has given instructions for a one page production worksheet for corn insured as grain and silage within the same unit. Draw a horizontal line in Item 24. Tons, to tenths, from 22 and 23 will be totaled and entered in upper part of box and bushels, to tenths, will be totaled and entered in the lower part of box.

25. **Adjuster's Signature, Code #, and Date:** Signature of adjuster, code number, and date signed **after** the insured (or insured's authorized representative) has signed. For an absentee insured, enter adjuster's code number ONLY. The signature and date will be entered AFTER the absentee has signed and returned the Production Worksheet.

Final indemnity inspections and final replanting payment inspections should be signed on bottom line.

26. **Insured's Signature and Date:** Insured's (or insured's authorized representative's) signature and date. BEFORE obtaining insured's signature, REVIEW ALL ENTRIES on the Production Worksheet WITH THE INSURED, particularly explaining codes, etc., that may not be readily understood.

Final indemnity inspections and final replanting payment inspections should be signed on bottom line.

# 27. **Page:**

**PRELIMINARY:** Page numbers – "1," "2," etc., at the time of inspection.

**REPLANT AND FINAL:** Page numbers – (Example: Page 1 of 1, Page 1 of 2, Page 2 of 2, etc.).

Example above shows allowance when the actual cost and/or 20% of the production guarantee is greater than the maximum allowance.

Insured's actual cost to replant - \$20.00/acre Price election - \$2.45 \$20.00 ÷ \$2.45 = 8.2 bu. 100.0 bu./acre x 20% = 20.0 bu/acre (both greater than 8.0 bu. Maximum allowed).

Appraised potential less than 90 percent of production guarantee. 100.0 x 90% = 90 bu./a – acre appraised potential 10 bu./acre. Total acreage from FSA permanent field measurement. Field A wheel measured.

See attached Special Report for measurements and calculations. Page 1 of 2 represents grain replant for the unit.

NARRATIVE (If more space is needed, attach a Special Report)

2 Unit # 3 Legal Description

1 Crop/Code#

Example above shows allowance when the actual cost and/or 20% of the production guarantee is greater than the maximum allowance.

Insured's actual cost to replant - \$20.00 acre Price election - \$16.70 \$20.00 ÷ 16.70 = 1.2 ton 15.0 ton/acre x 20% = 3.0 ton/acre (both greater than 1.0 ton maximum allowed)

Appraised potential less than 90 percent of production guarantee. 15.0 X 90 percent = 13.5 ton/a – acre appraised potential 6.0 tons. Total acreage from FSA permanent field measurement. Field A wheel measured. See attached Special Report for measurements and calculations. Page 2 of 2 represents grain silage replant for the unit.

**NOVEMBER 2005 FCIC-25080 (CORN)** 63

Insured's actual cost to replant - \$20.00/acre Price election - \$2.45 \$20.00 ÷ \$2.45 = 8.2 bushels 100.0 bu. x 20% = 20.0 bu/acre (both greater than 8.0 bu. maximum allowed)

Appraised potential less than 90 percent of production guarantee. 100.0 X 90 percent = 90 bu/A –acre appraised potential 10 bushels.

For row widths not listed in **TABLE B**, use the following formula:

#### **EXAMPLE:**

$$\frac{43,560 \text{ sq. ft./acre} \div \underline{25"}}{12" = 209.121 \text{ ft. or } 209.1 \text{ ft. row length}}$$

$$\frac{100 \text{ ft.}}{100 \text{ ft.}}$$

**TABLE C - CORN STAND REDUCTION - PERCENT OF POTENTIAL REMAINING**Use from emergence through 10<sup>th</sup> leaf stage. Interpolate as necessary and round to the nearest whole percent. (DO NOT USE AFTER 10<sup>TH</sup> LEAF STAGE.)

For percentage of production loss not on the chart, interpolate as follows:

Locate the percent leaf area destroyed directly below and above the actual percent of leaf area destroyed (taken from item 19 on the appraisal worksheet). Subtract the lower number from the actual percent and divide by 5. Multiply this result by the difference between the lower and higher production lost percentages. Add this amount to the percent production lost lower number, in percent to tenths.

**EXAMPLE**: Stage is  $18^{th}$  leaf. Actual percent of leaf area destroyed is 42. 40 and 45 (percents directly below and above). 42 - 40 = 2  $2 \div 5 = .4$  19 - 15 = 4  $4 \times .4 = 1.6$  1.6 + 15 = 16.6 16.6 % will be the percent damage for leaf destruction entered in item 20 on the appraisal worksheet.

To determine the production for depth not listed in the chart, use the following procedure:

The difference between 39.0 and 39.8 is 0.8 or 80% of the difference between values for 39.0 and 40.0 foot depth. The table value difference between 39.0 and 40.0 is 15.0 tons, 0.8 or 80% of which is 12.0 tons. The table value tonnage for 39.0-foot depth is added to the 0.8 foot depth tonnage (519.0 & 12.0) to provide the tonnage for 39.8 feet of silage depth (531.0 tons).

# TABLE K - SILAGE MOISTURE FACTORS

Moisture factors used to determine normal tonnage of dry silage appraised or harvested after normal time of harvest, or September 30.

| Percent<br>Moisture | Adjustment<br>Factor | Percent<br>Moisture | Adjustment<br>Factor |

**Example:** Determined moisture is 20 percent. Multiply factor 2.29 X tons of dry silage = tons at normal time of harvest (65 percent moisture equivalent).

# TABLE L - GRAIN-DEFICIENT SILAGE: APPRAISAL FACTORS

For use whenever a grain appraisal (made concurrently with a silage appraisal) shows LESS than 4.5 bushels per ton of silage and the acreage is insured or harvested as silage.

| Bushels Per Ton | Factor | Bushels Per Ton | Factor |
|-----------------|--------|-----------------|--------|
| 4.4             | .99    | 2.1             | .76    |
| 4.3             | .98    | 2.0             | .75    |
| 4.2             | .97    | 1.9             | .74    |
| 4.1             | .96    | 1.8             | .73    |
| 4.0             | .95    | 1.7             | .72    |
| 3.9             | .94    | 1.6             | .71    |
| 3.8             | .93    | 1.5             | .70    |
| 3.7             | .92    | 1.4             | .69    |
| 3.6             | .91    | 1.3             | .68    |
| 3.5             | .90    | 1.2             | .67    |
| 3.4             | .89    | 1.1             | .66    |
| 3.3             | .88    | 1.0             | .65    |
| 3.2             | .87    | 0.9             | .64    |
| 3.1             | .86    | 0.8             | .63    |
| 3.0             | .85    | 0.7             | .62    |
| 2.9             | .84    | 0.6             | .61    |
| 2.8             | .83    | 0.5             | .60    |
| 2.7             | .82    | 0.4             | .59    |
| 2.6             | .81    | 0.3             | .58    |
| 2.5             | .80    | 0.2             | .57    |
| 2.4             | .79    | 0.1             | .56    |
| 2.3             | 8      | 0.0             | .55    |
| 2.2             | .77    |                 |        |

Example: 10 tons per acre - silage appraisal 40 bushels per acre - grain appraisal

40

 $\overline{10}$  = 4.0 bu./ton = .95 factor to multiply times the production.

TABLE M - CORN MOISTURE ADJUSTMENT FACTORS

| Whole               | Tenths of Percent - Moisture |                |                |                |                |                |                |                |                |                |

Applicable only to shelled corn. If the actual test weight is not shown on the chart, refer to subsection 9B, Section II, item  $M_2$  for instructions.

# **EXHIBIT 1**

# **STAGE CHARACTERISTICS**

All Stage are based on 50 percent of the plants in the sample at or beyond a given phase of development.

|  |   | the plants in the sample at or i   |                                | <u>.</u>                           |

# **EXHIBIT 1**

# STAGE CHARACTERISTICS (CONTINUED)

| NAME OF<br>STAGE | AVERAGE TIME INTERVAL (THIS STAGE TO NEXT) | CHARACTERISTICS   | PERCENT OF<br>LEAF AREA<br>EXPOSED |  |  |
|------------------|--|---|------------------------------------|--|--|
| Tasseled         | 4 days                                     | Tassel fully extended; ear shoot exposed but no silk showing. Husks opened on the ear shoot would show the silk longer than cob. No pollen evident. Plant has reached maximum size.   |                                    |  |  |
| Silked           | 4 days                                     | Pollination period. Silks have emerged. Tassel is shedding pollen.  | 100                                |  |  |
| Silks Brown      | 5 days                                     | Pollination period almost complete. Seventy-five percent of silks on ear shoot showing a purple to brown color. Silks are not dry to the touch even though the color has changed to purplish brown.                                     |                                    |  |  |
| Pre-Blister      | 4 days                                     | Pollination period is complete. Silks are brown but not dry. No fluid in seed coat and kernel has appearance of a pimple.   |                                    |  |  |
| Blister          | 4 days                                     | Kernels on cob appear as watery blisters. Kernel is white fluid is colorless. Removal of fluid from kernel would leave only hull.   |                                    |  |  |
| Early Milk       | 4 days                                     | Beginning of roasting ear stage. Kernels changing in color from white to yellow. Kernels of seed coat starting to show slight yellow appearance. Thin chalky or milky substance in kernels.   |                                    |  |  |
| Milk             | 5 days                                     | Prime roasting ear stage. Full yellow color. Cob has reached its maximum length. Milky fluid in kernel, no solid substance.   |                                    |  |  |
| Late Milk        | 4 days                                     | Milky fluid thickening and solids forming at the end opposite point of kernel.  |                                    |  |  |
| Soft Dough       | 5 days                                     | Past prime roasting ear stage. Pasty or semi-solid. First few dents are showing near butt end. Kernels still produce a milky substance when squeezed.   |                                    |  |  |
| Early Dent       | 5 days                                     | Kernels along entire ear beginning to dent. Thick gummy substance will be evident when kernel is squeezed but kernels will squirt milk when mashed.   |                                    |  |  |
| Dent             | 5 days                                     | Most kernels dented or denting. Kernel can be cut easily with fingernail. While most kernels will not squirt milk when squeezed, there will be evidence of milk in the top of some kernels.   |                                    |  |  |
| Late Dent        | 5 days                                     | All kernels are dented. The kernels are drying down from the top where a small hard white layer of starch is forming.   |                                    |  |  |
| Nearly<br>Mature | 5 days                                     | Hull on opposite side of embryo has a shiny hardened appearance nearly halfway to cob. Kernel is not hard or brittle.   |                                    |  |  |
| Fully Mature     |  | Physiological maturity has been reached and the moisture level is below 40 percent on most Corn Belt hybrids. Shiny hardened appearance of hull on opposite side of embryo has extended to the cob. Dry matter accumulation has ceased. |                                    |  |  |

**NOTE:** See Figure A, B, and C Descriptive Pictures of the Corn Plant.
