

WrapAround Description - for CSAC meeting

Brief description: 45-60 minute role play with some of the group participating in the roles, and up to 30 minutes at the end to discuss the comparison of wraparound to traditional outpatient mental health treatment. Role play replicates the initial family team meeting developing a mission statement (which directs the work of the team) and developing at least one goal to begin the process. Gives a brief real life demonstration of family engagement, roles of wraparound staff, and how the Child & Family team functions.
