Semivolatile-organic compounds detected in streambed sediment, in the Santa Ana River Basin, California, 1998

[Number below the compound is the data parameter code, which is a 5-digit number used in the USGS computerized data system, National Water Information System (NWIS), to uniquely identify a specific constituent or property; sediment-quality guidelines from McDonald and others (2000); sediment values are for less than 2 millimeter fraction, dry weight; compounds in yellow are polycyclic aromatic hydrocarbons, compounds in green are phenol, and compounds in blue are phthalates; LRL, laboratory reporting limit; MWD, Metropolitan Water District; PEC, probable-effect concentration; SAR, Santa Ana River; TEC, threshold-effect concentration; Cr, Creek;; µg/kg, microgram per kilogram; *, value corrected for laboratory contamination by subtracting the 95th percentile concentration in laboratory blanks; E, estimated value; M, presence verified but not quantified; <, less than]
