

# **APPENDIX A**

## **National Summary and Fertility Clinic Reports**

# APPENDIX A: HOW TO INTERPRET A CONFIDENCE INTERVAL

---

## **What is a confidence interval?**

Simply speaking, confidence intervals are a useful way to consider margin of error, a statistic often used in voter polls to indicate the range within which a value is likely to be correct (e.g., 30% of the voters favor a particular candidate with a margin of error of plus or minus 3.5%). Similarly, in this report, confidence intervals are used to provide a range that we can be quite confident contains the success rate for a particular clinic during a particular time.

## **Why do we need to consider confidence intervals if we already know the exact success rates for each clinic in 2001?**

No success rate or statistic is absolute. Suppose a clinic performed 100 cycles among women younger than 35 in 2001 and had a success rate of 20% with a confidence interval of 12%–28%. The 20% success rate tells us that the average chance of success for women younger than 35 treated at this clinic in 2001 was 20%. How likely is it that the clinic could repeat this performance? For example, if the same clinic performed another 100 cycles under similar clinical conditions on women with similar characteristics, would the success rate again be 20%? The confidence interval tells us that the success rate would likely fall between 12% and 28%.

## **Why does the size of the confidence interval vary for different clinics?**

The size of the confidence interval gives us a realistic sense of how secure we feel about the success rate. If the clinic had performed only 20 cycles instead of 100 among women younger than 35 and still had a 20% success rate (4 successes out of 20 cycles), the confidence interval would be much larger (between 3% and 37%) because the success or failure of each individual cycle would be more significant. For example, if just one more cycle had resulted in a live birth, the success rate would have been substantially higher—25%, or 5 successes out of 20 cycles. Likewise, if just one more cycle had not been successful, the success rate would have been substantially lower—15%, or 3 out of 20 cycles. Compare this scenario to the original example of the clinic that performed 100 cycles and had a 20% success rate. If just one more cycle had resulted in a live birth, the success rate would have changed only slightly, from 20% to 21%, and if one more cycle had not been successful, the success rate would have fallen to only 19%. Thus our confidence in a 20% success rate depends on how many cycles were performed.

## **Why should confidence intervals be considered when success rates from different clinics are being compared?**

Confidence intervals should be considered because success rates can be misleading. For example, if Clinic A performs 20 cycles in a year and 8 cycles result in a live birth, its live birth rate would be 40%. If Clinic B performs 600 cycles and 180 result in a live birth, its live birth rate would be 30%. We might be tempted to say that Clinic A has a better success rate than Clinic B. However, because Clinic A performed few cycles, its success rate would have a wide 95% confidence interval of 18.5%–61.5%. On the other hand, because Clinic B performed a large number of cycles, its success rate would have a relatively narrow confidence interval of 26.2%–33.8%. Thus Clinic A could have a rate as low as 18.5% and Clinic B could have a rate

as high as 33.8% if each clinic repeated its treatment with similar patients under similar clinical conditions. Moreover, Clinic B's rate is much more likely to be reliable because the size of its confidence interval is much smaller than Clinic A's.

Even though one clinic's success rate may appear higher than another's based on the confidence intervals, ***these confidence intervals are only one indication that the success rate may be better. Other factors also must be considered*** when comparing rates from two clinics. For example, some clinics see more than the average number of patients with difficult infertility problems, while others discourage patients with a low probability of success. For further information on important factors to consider when using the tables to assess a clinic, refer to pages 61–63.

---

## Findings from Validation Visits for 2001 ART Data

Clinic site visits for validation of 2001 ART data were conducted March through June 2003. During each visit, data reported by the clinic were compared with information recorded in patients' charts. Records for 1,979 cycles at 40 clinics were randomly selected for validation. These selected cycles included 614 cycles that resulted in a pregnancy and 512 cycles that resulted in a live-birth delivery.

Discrepancy rates are listed on the next page for key data items that were validated for each of the selected cycles. Most discrepancy rates were low (at or below 5%). Additionally, review of the discrepancies indicated that in the majority of cases, the error was minor and did not affect the success rates (see table on page 462). In addition to fully validating data for the randomly selected 1,979 cycles, during each visit the validation team also reviewed the documentation for **every** live birth that had been reported to CDC. There were no cases found in which a live birth had been reported erroneously. In all, validation indicated that the data are being accurately reported by the clinics and that the success rates presented in this report are valid.

## Discrepancy Rates by Data Fields Selected for Validation

Data Field Name	Discrepancy Rate	Comments
Patient age	1.5%	Nearly all discrepancies were within 1–2 years and did not result in a change in categorization of age groups.
Diagnosis of infertility	5.8%	For many discrepancies, multiple causes of infertility had been diagnosed in the couple, but only a single cause had been recorded in the data set.
Type of ART (i.e., fresh vs. frozen; donor vs. nondonor)	<1%	
Use of ICSI	1.0%	
Number of embryos transferred	1.7%	Nearly all discrepancies involved higher-order (>4) embryo transfers and were within 1–2 embryos.
Outcome of ART treatment (i.e., pregnant vs. not pregnant)	<1%	
Number of fetal hearts on ultrasound	2.8%	Of those with misreported number of fetal hearts, only 6 cases (<1% of total) resulted in a change in categorization of single- versus multiple-fetus pregnancy.
Pregnancy outcome (i.e., miscarriage, stillbirth, and live birth)	<1%	All discrepancies involved misclassification between miscarriage and stillbirth. None of the discrepancies involved misclassification of live birth.
Number of infants born	<1%	None of the discrepancies involved misclassification of singleton- versus multiple-birth deliveries.
Canceled cycles	<1%	

Notes: ART = assisted reproductive technology; ICSI = intracytoplasmic sperm injection.

## **APPENDIX B**

# National Summary and Fertility Clinic Reports

## APPENDIX B: GLOSSARY OF TERMS USED IN THIS REPORT

---

**Adverse outcome.** A pregnancy that does not result in a live birth. The adverse outcomes reported for ART procedures are miscarriages, induced abortions, and stillbirths.

**American Society for Reproductive Medicine (ASRM).** Professional society whose affiliate organization, the Society for Assisted Reproductive Technology (SART), reports annual fertility clinic data to the Centers for Disease Control and Prevention (CDC).

**ART (assisted reproductive technology).** All treatments or procedures that involve surgically removing eggs from a woman's ovaries and combining the eggs with sperm to help a woman become pregnant. The types of ART are in vitro fertilization (IVF), gamete intrafallopian transfer (GIFT), and zygote intrafallopian transfer (ZIFT).

**ART cycle.** A process in which (1) an ART procedure is carried out, (2) a woman has undergone ovarian stimulation or monitoring with the intent of having an ART procedure, or (3) frozen embryos have been thawed with the intent of transferring them to a woman. A cycle begins when a woman begins taking fertility drugs or having her ovaries monitored for follicle production.

**Canceled cycle.** An ART cycle in which ovarian stimulation was carried out but was stopped before eggs were retrieved or, in the case of frozen embryo cycles, before embryos were transferred. Cycles are canceled for many reasons: eggs may not develop, the patient may become ill, or the patient may choose to stop treatment.

**Combination cycle.** A cycle that uses more than one ART procedure. Combination cycles usually involve IVF plus either GIFT or ZIFT.

**Cryopreservation.** The practice of freezing extra embryos from a couple's ART cycle for potential future use.

**Diminished ovarian reserve.** This diagnosis means that the ability of the ovary to produce eggs is reduced. Reasons include congenital, medical, or surgical causes or advanced maternal age (older than 40).

**Donor egg cycle.** An embryo is formed from the egg of one woman (the donor) and then transferred to another woman who is unable to use her own eggs (the recipient). The donor relinquishes all parental rights to any resulting offspring.

**Donor embryo.** An embryo that is donated by a couple who previously underwent ART treatment and had extra embryos available.

**Ectopic pregnancy.** A pregnancy in which the fertilized egg implants in a location outside of the uterus—usually in the fallopian tube, the ovary, or the abdominal cavity. Ectopic pregnancy is a dangerous condition that must receive prompt medical treatment.

**Egg.** A female reproductive cell, also called an oocyte or ovum.

**Egg retrieval (also called oocyte retrieval).** A procedure to collect the eggs contained in the ovarian follicles.

**Egg transfer (also called oocyte transfer).** The transfer of retrieved eggs into a woman's fallopian tubes through laparoscopy. This procedure is used only in GIFT.

**Embryo.** An egg that has been fertilized by a sperm and has undergone one or more divisions.

**Embryo transfer.** Placement of embryos into a woman's uterus through the cervix after IVF; in ZIFT, the embryos are placed in a woman's fallopian tube.

---

**Endometriosis.** A medical condition that involves the presence of tissue similar to the uterine lining in abnormal locations. This condition can affect both fertilization of the egg and embryo implantation.

**Fertilization.** The penetration of the egg by the sperm and the resulting combining of genetic material that develops into an embryo.

**Fetus.** The unborn offspring from the eighth week after conception to the moment of birth.

**Follicle.** A structure in the ovaries that contains a developing egg.

**Fresh eggs, sperm, or embryos.** Eggs, sperm, or embryos that have not been frozen. Fresh embryos, however, may have been conceived using either fresh or frozen sperm.

**Frozen embryo cycle.** An ART cycle in which frozen (cryopreserved) embryos are thawed and transferred to the woman.

**Gamete.** A reproductive cell, either a sperm or an egg.

**GIFT (gamete intrafallopian transfer).** An ART procedure that involves removing eggs from the woman's ovary, combining them with sperm, and using a laparoscope to place the unfertilized eggs and sperm into the woman's fallopian tube through small incisions in her abdomen.

**Gestation.** The period of time from conception to birth.

**Gestational carrier (also called a gestational surrogate).** A woman who gestates, or carries, an embryo that was formed from the egg of another woman. The gestational carrier usually has a contractual obligation to return the infant to its intended parents.

**Gestational sac.** A fluid-filled structure that develops within the uterus early in pregnancy. In a normal pregnancy, a gestational sac contains a developing fetus.

**ICSI (intracytoplasmic sperm injection).** A procedure in which a single sperm is injected directly into an egg; this procedure is most commonly used to overcome male infertility problems.

**Induced or therapeutic abortion.** A surgical or other medical procedure used to end a pregnancy.

**IUI (intrauterine insemination).** A medical procedure that involves placing sperm into a woman's uterus to facilitate fertilization. IUI is not considered an ART procedure because it does not involve the manipulation of eggs.

**IVF (in vitro fertilization).** An ART procedure that involves removing eggs from a woman's ovaries and fertilizing them outside her body. The resulting embryos are then transferred into the woman's uterus through the cervix.

**Laparoscopy.** A surgical procedure in which a fiber-optic instrument (a laparoscope) is inserted through a small incision in the abdomen to view the inside of the pelvis.

**Live birth.** The delivery of one or more babies with any signs of life.

**Male factor.** Any cause of infertility due to low sperm count or problems with sperm function that makes it difficult for a sperm to fertilize an egg under normal conditions.

**Miscarriage (also called spontaneous abortion).** A pregnancy ending in the spontaneous loss of the embryo or fetus before 20 weeks of gestation.

**Multifetal pregnancy reduction.** A procedure used to decrease the number of fetuses a woman carries and improve the chances that the remaining fetuses will develop into healthy infants. Multifetal reductions that occur naturally are referred to as spontaneous reductions.

**Multiple factors, female only.** A diagnostic category used when more than one female cause of infertility is diagnosed.

---

**Multiple factors, female and male.** A diagnostic category used when one or more female causes and male factor infertility are diagnosed.

**Multiple-fetus pregnancy.** A pregnancy with two or more fetuses, determined by the number of fetal hearts observed on an ultrasound performed early in pregnancy (usually in the first trimester).

**Multiple-infant birth.** A pregnancy that results in the birth of more than one infant.

**Oocyte.** The female reproductive cell, also called an egg.

**Other causes of infertility.** These include immunological problems, chromosomal abnormalities, cancer chemotherapy, and serious illnesses.

**Ovarian monitoring.** The use of ultrasound and/or blood or urine tests to monitor follicle development and hormone production.

**Ovarian stimulation.** The use of drugs (oral or injected) to stimulate the ovaries to develop follicles and eggs.

**Ovulatory dysfunction.** A diagnostic category used when a woman's ovaries are not producing eggs normally. It includes polycystic ovary syndrome and multiple ovarian cysts.

**Pregnancy (clinical).** A pregnancy documented by ultrasound that shows a gestational sac in the uterus. For ART data collection purposes, pregnancy is defined as a clinical pregnancy rather than a chemical pregnancy (i.e., a positive pregnancy test).

**Singleton.** A single live-born infant.

**Society for Assisted Reproductive Technology (SART).** An affiliate of the American Society for Reproductive Medicine composed of clinics and programs that provide ART. SART reports annual fertility clinic data to CDC.

**Sperm.** The male reproductive cell.

**Stillbirth.** The birth of an infant after 20 or more weeks of gestation that shows no signs of life.

**Stimulated cycle.** An ART cycle in which a woman receives oral or injected fertility drugs to stimulate her ovaries to produce more follicles.

**Thawed embryo cycle.** Same as frozen embryo cycle.

**Tubal factor.** A diagnostic category used when the woman's fallopian tubes are blocked or damaged, making it difficult for the egg to be fertilized or for an embryo to travel to the uterus.

**Ultrasound.** A technique used in ART for visualizing the follicles in the ovaries, the gestational sac, or the fetus.

**Unexplained cause of infertility.** A diagnostic category used when no cause of infertility is found in either the woman or the man.

**Unstimulated cycle.** An ART cycle in which the woman does not receive drugs to stimulate her ovaries to produce more follicles. Instead, follicles develop naturally.

**Uterine factor.** A structural or functional disorder of the uterus that results in reduced fertility.

**ZIFT (zygote intrafallopian transfer).** An ART procedure in which eggs are collected from a woman's ovary and fertilized outside her body. A laparoscope is then used to place the resulting zygote (fertilized egg) into the woman's fallopian tube through a small incision in her abdomen.

## **APPENDIX C**

# National Summary and Fertility Clinic Reports

# APPENDIX C: ART CLINICS, 2001

## Reporting ART Clinics for 2001, by State

---

If the clinic name has changed since 2001, the current name is listed in italics directly under the 2001 name.

Clinic names preceded by the § symbol have reorganized since 2001. Reorganization is defined as a change in ownership or affiliation or a change in at least two of the three key staff positions (practice director, medical director, or laboratory director). Contact SART for current clinic information.

Explanation of abbreviations for accrediting agencies used throughout this list:

CAP = College of American Pathologists, Reproductive Laboratory Accreditation Program

JCAHO = Joint Commission on Accreditation of Healthcare Organizations

NYSTB = New York State Tissue Bank Program

**PLEASE NOTE** that CDC does not oversee any of these accreditation programs. For further information on how to contact accrediting organizations directly, see page 70.

### ALABAMA

ART Program of Alabama  
Women's Medical Plaza  
2006 Brookwood Medical Center Dr., Suite 508  
Birmingham, AL 35209  
Telephone: (205) 870-9784; Fax: (205) 870-0698  
Lab Name: IVF/Andrology Laboratory  
Accreditation: CAP/ASRM

University of Alabama at Birmingham  
IVF Program  
2000 Sixth Ave. South  
Birmingham, AL 35233  
Telephone: (205) 801-8225; Fax: (205) 975-5732  
Lab Name: UAB Gamete Biology Laboratory  
Accreditation: CAP/ASRM

Center for Reproductive Medicine  
3 Mobile Infirmiry Cir., Suite 213  
Mobile, AL 36607  
Telephone: (251) 438-4200; Fax: (251) 438-4211  
Lab Name: Center for Reproductive Medicine  
Accreditation: CAP/ASRM

University of South Alabama IVF and ART Program  
Dept. of OB/GYN, Div. of Reproductive Endocrinology  
307 University Blvd. North, CC/CB 326  
Mobile, AL 36688  
Telephone: (251) 438-4211; Fax: (251) 460-7251  
Lab Name: University of South Alabama IVF  
and Andrology Lab  
Accreditation: CAP/ASRM

### ARIZONA

Fertility Treatment Center  
3200 N. Dobson Rd., Suite F-7  
Chandler, AZ 85224  
Telephone: (480) 831-2445; Fax: (480) 897-1283

## Nonreporting ART Clinics for 2001, by State

---

The clinics listed below provided ART services throughout 2001 and accordingly were required to submit ART cycle data under the provisions of the Fertility Clinic Success Rate and Certification Act passed by the U.S. Congress. These clinics either failed to submit data or did not provide verification by the clinic medical director that the tabulated success rates were correct, as required for publication.

Consumers who are aware of a clinic that was in operation in 2001 but is not included in the lists of either reporting or nonreporting clinics in this report are encouraged to contact us with the complete name, mailing address, and telephone number of the clinic, by e-mail at [ccdinfo@cdc.gov](mailto:ccdinfo@cdc.gov) (Subject: ART) or by regular mail at CDC, ATTN: ARTE team; 4770 Buford Highway, N.E.; Mail Stop K-34; Atlanta GA 30341-3717. Providing this information will help ensure that clinics that should be in the report will be included in upcoming years.

Coastal Fertility Medical Center, Inc.  
4900 Barranca Pkwy.  
Irvine, CA 92604
