^a Expressed in degree of similarity of present vegetation to the potential natural, or climax, plant community: Potential natural community = 76-100% similarity, Late Seral = 51-75% similarity; Mid Seral = 26-50% similarity; Early Seral = 0-25% similarity.

^b This category includes rangelands for which neither data nor estimates are available.

Ecological site inventories are being conducted to fill in data gaps.
This table will be updated annually to reflect new information and changes in seral stages
