MEMORANDUM

Subject: Additional information concerning photochemical model runs OMS1 and OMS2, supplied at stakeholder request.

From: Harvey M. Michaels
Assessment and Modeling Division
Office of Mobile Sources

To: Air Docket A-97-10

This memorandum supplies the standard OTAG metrics that were calculated for photochemical model runs OMS1 and OMS2. These runs were exploratory simulations. OMS1 reduced mobile source VOC only, and OMS2 reduced mobile source NO_x only with respect to the 2007 Regional Ozone Transport Rule (ROTR) simulation (SNPR inventory). Further information concerning these model runs may be found in "Photochemical Air Quality Simulations in Support of Tier 2/Sulfur," a memorandum to Air Docket A-97-10. It is also available on the World Wide Web at <http://www.epa.gov/oms/t2models.htm>.

Detailed descriptions of the OTAG modeling system may be found in Chapter 2, "Regional and Urban Scale Modeling Workgroup" in the *OTAG Technical Supporting Document*. This document is in Air Docket A-96-56, Category II-A-14. It may also be found on the World Wide Web at <http://www.epa.gov/ttn/rto/otag/finalrpt/>.

The metrics have been printed and follow the figures in the docketed hard copy of this memo. In the version posted on the World Wide Web, they are in four separate Excel spreadsheet files: OMS-88.xls, OMS-91.xls, OMS-93.xls, and OMS-95.xls.

The rest of this memo 1) describes the geographical regions to which the metrics were applied, 2) provides summary definitions for the metrics, 3) provides detailed descriptions for the metrics that are not self-explanatory, and 4) presents the metrics themselves.

Geographical regions to which the metrics were applied

These metrics were applied to the following subsets of the OTAG domain:

- The whole OTAG modeling domain. A full description may be found in Chapter 2 of the *OTAG Technical Supporting Document* referenced above.
- The OTAG fine grid. A portion of the modeling domain, which uses a finer grid. A full description may be found in Chapter 2 of the *OTAG Technical Supporting Document* referenced above.

- Twelve ozone problem regions, indicated on Figure 1. These regions are those that were used in the ROTR SNPRM, Federal Register, May 11, 1998, Vol. 63, pp. 25901-25994.
- Four quadrants of the OTAG region, indicated on Figure 2.
- Four urban-scale UAM domains (New England, New York City, Philadelphia, and Baltimore-Washington DC).

Summary of OTAG Air Quality Metrics

"Base" refers to the base case simulations, which is 2007 ROTR (SNPR inventory). "Control" refers to either OMS1 or OMS2.

- Peak 1-Hr Ozone
- Peak 1-Hr Total - # of Grid Cells (with daily maximum 1-hr ozone)> 100 ppb
- Peak 1-Hr Total - # of Grid Cells (with daily maximum 1-hr ozone)> 120 ppb
- Peak 1-Hr Total - # of Grid Cells (with daily maximum 1-hr ozone)> 124 ppb
- Peak 1-Hr Total - # of Grid Cells (with daily maximum 1-hr ozone)> 140 ppb
- Peak 8-Hr Ozone
- Peak 8-Hr Total - # of Grid Cells (with daily maximum 8-hr ozone)> 84 ppb
- Peak 8-Hr Total - # of Grid Cells (with daily maximum 8-hr ozone)> 100 ppb
- Peak 8-Hr Total - # of Grid Cells (with daily maximum 8-hr ozone)> 120 ppb
- # of Grid Cell - Hours > 100 ppb
- # of Grid Cell - Hours > 120 ppb
- # of Grid Cell - Hours > 124 ppb
- # of Grid Cells - Hours > 140 ppb
- Areal Exposure (ppb-hrs) > 100 ppb
- Areal Exposure (ppb-hrs) > 124 ppb
- Weighted Sum of Differences (ppb) > 100 ppb
- Weighted Sum of Differences (ppb) > 124 ppb
- Average Difference (ppb) Where the Base is Above > 100 ppb
- Average Difference (ppb) Where the Base is Above > 124 ppb
- Average Difference (ppb) Where the Control is Above > 100 ppb
- Average Difference (ppb) Where the Control is Above > 124 ppb
- Number of Grid Cells Where the Base is Above and Control is Below > 100 ppb
- Number of Grid Cells Where the Base is Above and Control is Below > 124 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 4 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 12 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 28 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 12 to - 6 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 6 to - 4 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 4 to - 2 ppb
- # Grid Cells in Subdomain with Max Difference ≤ - 2 to + 2 ppb
- # Grid Cells in Subdomain with Max Difference ≤ + 2 to + 4 ppb

- # Grid Cells in Subdomain with Max Difference \leq + 4 to + 6 ppb
- # Grid Cells in Subdomain with Max Difference \leq + 6 to + 12 ppb
- # Grid Cells in Subdomain with Max Difference \geq 12 ppb
- # Grid Cells in Subdomain with Max Difference \geq 4 ppb
- # Grid Cells with < - 12 ppb Decrease and Base is > 100 ppb
- # Grid Cells with < - 12 ppb Decrease and Base is > 124 ppb
- # Grid Cells with < - 6 ppb Decrease and Base is > 100 ppb
- # Grid Cells with < - 6 ppb Decrease and Base is > 124 ppb
- # Grid Cells with < - 4 ppb Decrease and Base is > 100 ppb
- # Grid Cells with < - 4 ppb Decrease and Base is > 124 ppb
- # Grid Cells with < - 2 ppb Decrease and Base is > 100 ppb
- # Grid Cells with < - 2 ppb Decrease and Base is > 124 ppb
- # Grid Cells with > 2 ppb Increase and Base is > 100 ppb
- # Grid Cells with > 2 ppb Increase and Base is > 124 ppb
- # Grid Cells with > 4 ppb Increase and Base is > 100 ppb
- # Grid Cells with > 4 ppb Increase and Base is > 124 ppb
- # Grid Cells with > 6 ppb Increase and Base is > 100 ppb
- # Grid Cells with > 6 ppb Increase and Base is > 124 ppb

Descriptions of Selected Air Quality Metrics

The following are brief descriptions of those metrics that are not self-explanatory. "Base" refers to the base case simulations, which is the 2007 ROTR (SNPR inventory) simulation. "Control" refers to either OMS1 or OMS2.

Areal Exposure

Areal Exposure was calculated by first summing all hourly concentrations that are \geq 125 ppb (i.e. add together the predicted hourly "ppb" values that are \geq 125 ppb) for each grid cell individually, for each day. These "daily exposure" values in each grid were then summed by grid cell over all days in all 4 episodes to produce the total exposure for each grid cell. The resulting grid cell exposure values were summed over all grid cells in the region. The region total exposure values were then multiplied by the total area of the grid cells included in the calculation to produce the areal exposure values in units of ppb-hrs-km²).

- For example assume the following data set for Region "X":

	Hourly Ozone Values (ppb)				
	Day 7 of the episode		Day 8 of the episode		
Hours	grid cell "a"	grid cell "b"	grid cell "a"	grid cell "b"	
00-11	all values <125 ppb		all values <125 ppb		
11-12	119	130	100	119	

12-13	128	143		105	135	
13-14	133	150		112	142	
14-15	140	157		118	151	
15-16	139	162		115	148	
16-23	128	131		107	123	
Sum of Values ≥ 125 ppb	668	873		0	576	

- The total exposure for Region "X" for this episode is $668+873+576 = 2117$.
- Assume that the grid cells are exactly 12km x 12km such that the area of each grid cell is 144 km^2 and thus, the total area of the 2 grid cells with predictions ≥ 125 ppb is 288 km^2 . [Note that a latitude/longitude coordinate system was used by OTAG such that each grid cell in the Fine Grid was $1/9^\circ$ latitude by $1/6^\circ$ longitude (approximately 12km). Thus, in calculating the areal exposure, the area of each grid cell was calculated separately, based upon its geographic location of the grid cell.]
- The areal exposure for Region "X" is then 2117×288 or approximately 609,700 ppb-hrs- km^2 .

Weighted Sum of Differences > 124 ppb

This metric is calculated by first determining the change in daily maximum 1-hr ozone in each grid cell between the Base Case and the Control scenario for all daily maximum values > 124 ppb (in the Base Case). This "ppb" "change in ozone" is multiplied by the corresponding Base Case ozone prediction in that grid cell. These concentration "weighted" differences are calculated for each day and then summed for the episode. Finally, the sum of "weighted" differences is divided by the sum of the Base Case daily maximum concentrations to produce the values for this metric. This metric provides a means for examining the "average" ozone reduction in a way that gives more importance or "weight" to reductions that occur at high concentrations.

- For example, consider the following data set for Region "X"

	Daily Max Ozone (ppb)				Daily Max Ozone (ppb)			
	Grid Cell "a"			Base x Diff	Grid Cell "b"			Base x Diff
	Base	Control	Diff		Base	Control	Diff	

Day 5	128	119	9	1152	154	142	12	1848
Day 6	143	130	13	1859	166	147	19	3154
Day 7	156	133	23	3588	130	122	8	1040
Day 8	148	124	24	3552	103	88	N/A	0
Day 9	119	110	N/A	0	149	135	14	2086
Sum of Values ≥ 125 ppb	575				599			
Sum of "Diff x Base"				10151				8128

- Thus, for Region "X" the "weighted sum of differences" in this example is $(10151 + 8128)/(575 + 599) = 15.6$ ppb.

Average Difference Where the Base is Above > 100 ppb

This metric is the average difference in daily maximum ozone concentrations between the Base Case and the Control scenario for all days and grid cells with Base Case ozone >100 ppb.

Average Difference Where the Control is Above > 100 ppb

This metric is the average difference in daily maximum ozone concentrations between the Base Case and the Control scenario for all days and grid cells with Control scenario ozone >100 ppb.

Number of Grid Cells Where the Base is Above and Control is Below > 100 ppb

This metric is the number of grid cells in which the Base Case daily maximum 1-hr ozone is >100 ppb, but the Control concentration drops to <100 ppb.

Grid Cells in Subdomain with Max Difference ≤ -4 ppb

This metric is the number of grid cells in a problem area which have a reduction in daily maximum ozone of 4 ppb or more during the episode.

Grid Cells with < -12 ppb Decrease and Base is > 100 ppb

This metric is the number of grid cells in a problem area which have a reduction in daily maximum ozone of more than 12 ppb on days when the Base Case daily maximum ozone is >100 ppb.

Figure 1. Twelve of the ozone "Problem Areas" selected by OTAG. Source: Federal Register, Vol. 63, p. 25959, May 11, 1998, NO_x SIP Call SNPRM.

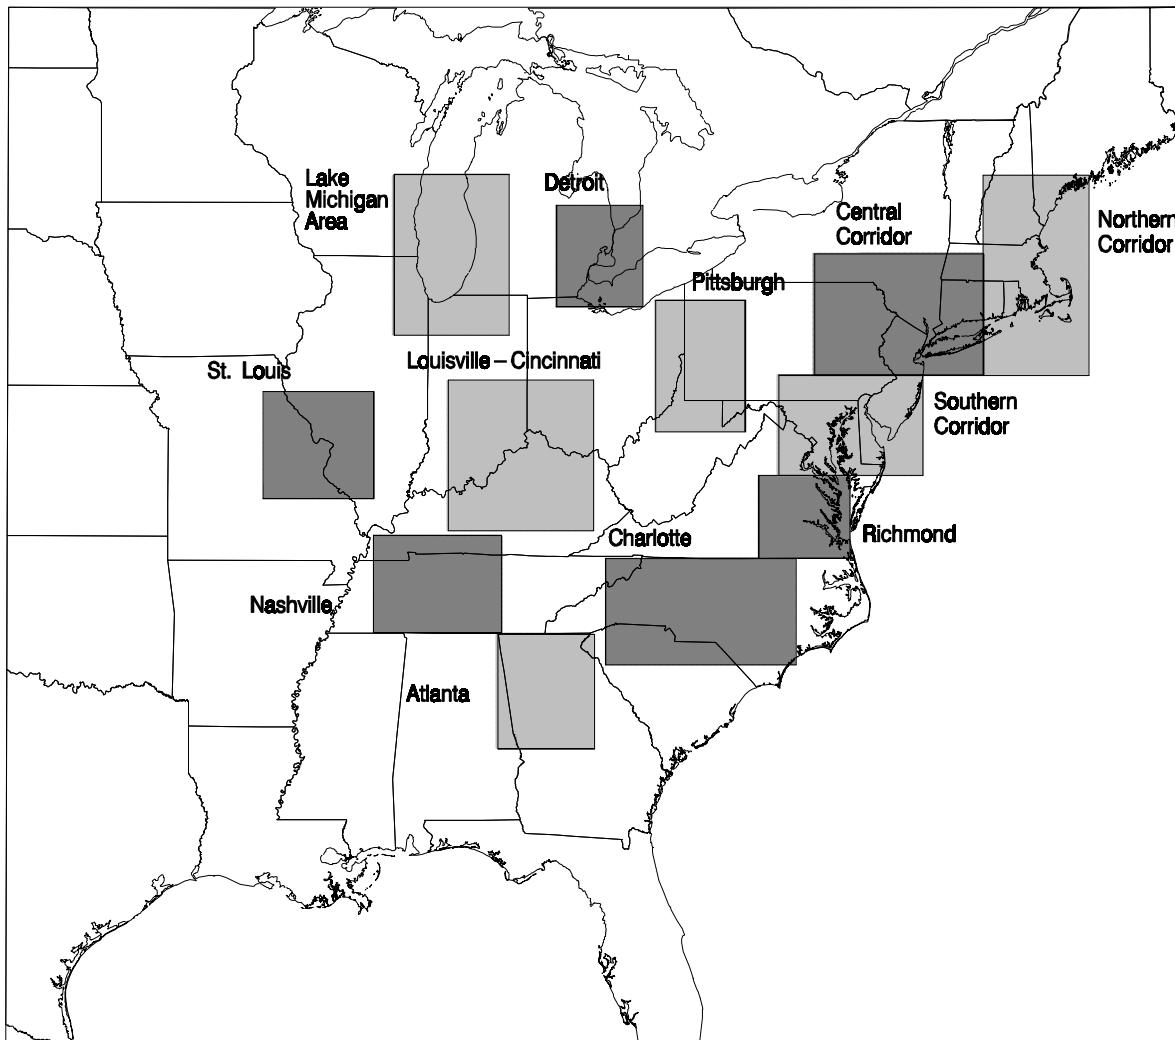

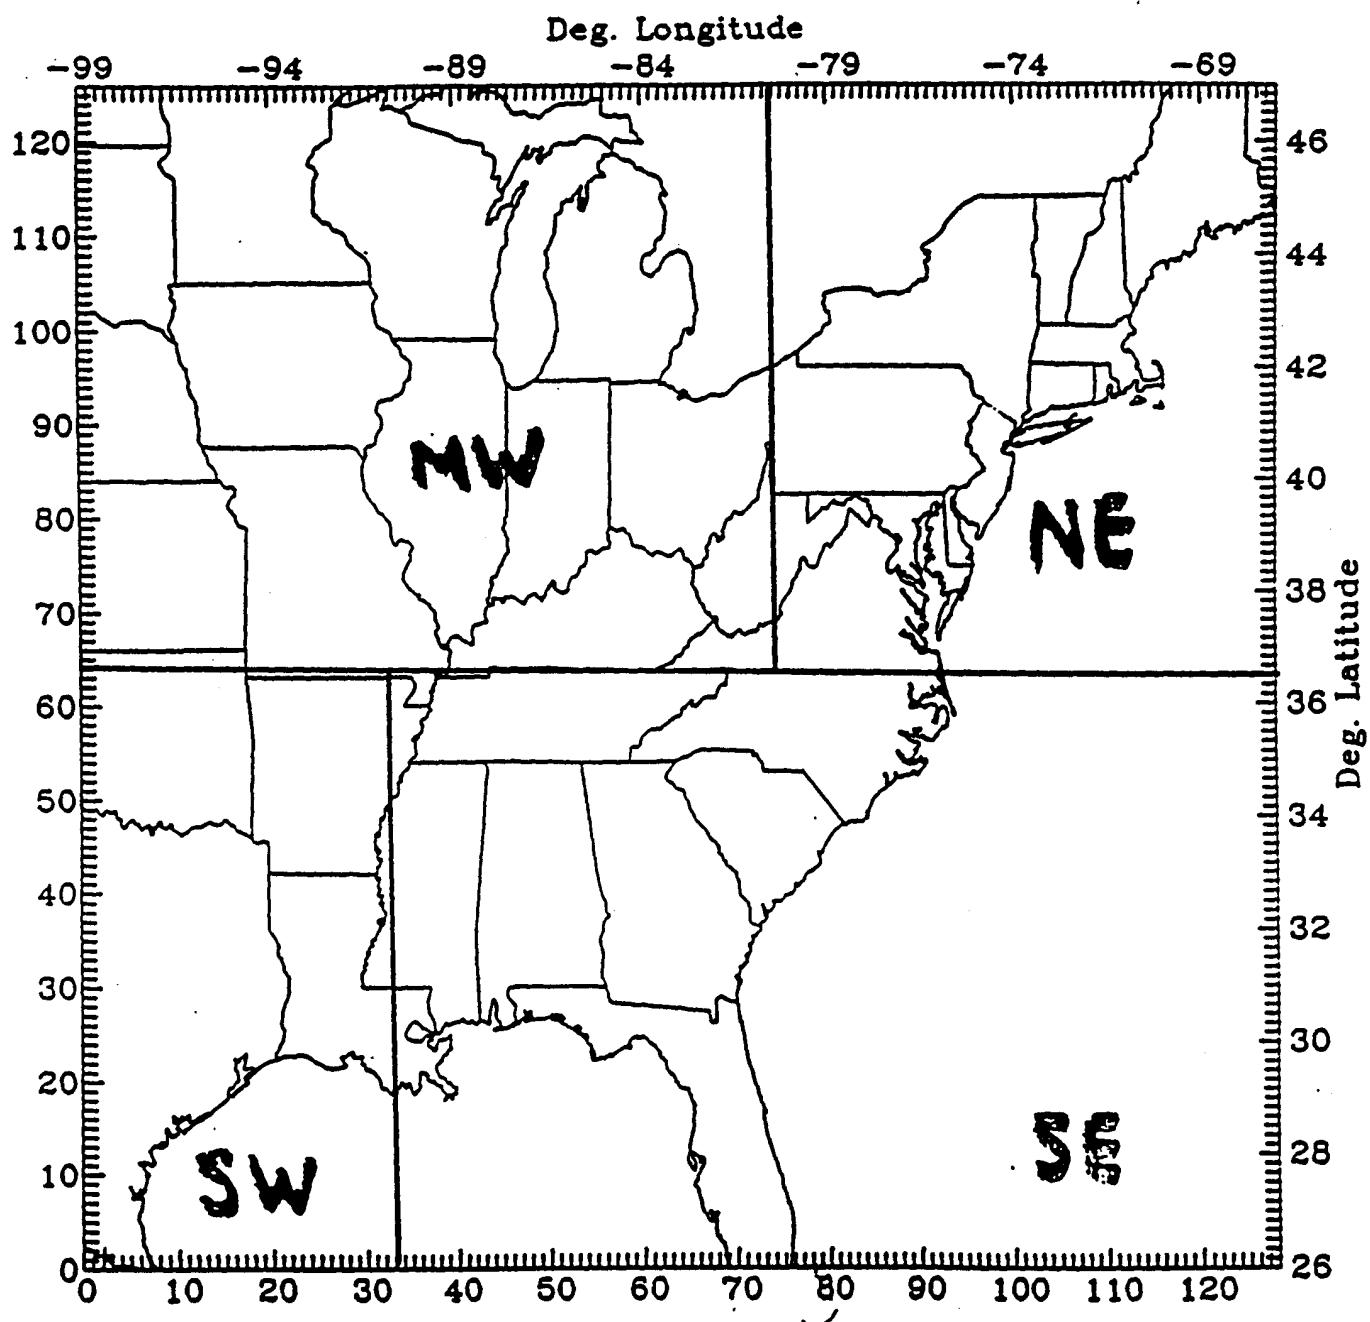

Figure 2. Positions of the four quadrants of the OTAG domain.
