WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to incorporate references to the Federal Reserve Board's Regulation W, primarily with regard to the bank holding company (BHC) inspection process. The section includes also a discussion of the mandatory reporting of certain intercompany transactions on the FR Y-8, The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates, *and its instructions. The mandatory report is to be submitted quarterly to the Federal Reserve by (1) all top-tier BHCs, including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The examiner's inspection responsibilities are discussed.*

2020.0.1 ANALYSIS OF INTERCOMPANY TRANSACTIONS

The analysis of intercompany transactions between a parent company, its nonbank subsidiaries, and its bank subsidiaries is primarily intended to assess the nature of the relationships between these entities and the effect of the relationships on the subsidiary insured depository institutions (IDIs). An *insured depository insitution* includes any state bank, national bank, trust company, or banking association and any institution that takes deposits that are insured by the Federal Deposit Insurance Corporation, including savings associations. Both the legal and financial ramifications of such transactions are areas of concern. Certain intercompany transactions are subject to the provisions of section 23A or 23B (or both) of the Federal Reserve Act and the Federal Reserve Board's Regulation W. Section 23A of the Federal Reserve Act is one of the most important statutes on limiting exposures to individual institutions and protecting the federal safety net. Several types of intercompany transactions and the primary regulatory concerns of each are presented below.

Dividends paid by subsidiaries to the parent. Dividends are a highly visible cash outflow by subsidiaries. If the dividend payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the subsidiary's capital ratios will deteriorate. These dividends may also have a negative effect on the subsidiary's liquidity position.

Transactions with affiliates. Transactions between subsidiary IDI affiliates is another area of potential abuse of subsidiary banks. Regulatory concern centers on the quantitative limits and collateral restrictions on certain transactions by subsidiary banks with their affiliates. These restrictions are designed to protect subsidiary IDIs from losses resulting from transactions with affiliates.

Fees paid by subsidiaries. Management or service fees are another cash outflow of bank subsidiaries. These fees may be paid to the parent, the nonbank subsidiaries, or, in some cases, to the other bank subsidiaries. Regulatory concern focuses on whether such fees are reasonable in relation to the services rendered and on the financial impact of the fees on the bank subsidiaries.

Tax allocation. How a bank holding company organization determines to allocate taxes among its component companies involves questions of both the magnitude and timing of the cash-flow effects. Unreasonable or untimely tax payments or refunds to the bank can have an adverse effect on the financial condition of the banking subsidiaries.

Purchases or swaps of assets. Asset purchases or swaps between a bank and its affiliates can create the potential for abuse of subsidiary banks. Regulatory concern focuses on the fairness of such asset transactions and their financial impact and timing. Fairness and financial considerations include the quality and collectibility and fair values of such assets and their liquidity effects. IDIs generally are prohibited from purchasing low-quality assets from affiliates. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with nonearning assets. Improper timing or certain structurings of asset transactions also can cause them to be regarded as extensions of credit to affiliates. As such, these types of transactions could potentially violate applicable regulations and statutes.

Compensating balances. A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Other expense allocations. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. Furthermore, a subsidiary bank should not pay for expenses for which it does not receive a benefit.

2020.0.2 ROLE OF THE EXAMINER

To properly assess intercompany transactions and relationships between affiliates, the examiner must make a thorough analysis of most intercompany transactions and must have a knowledge of applicable laws, regulations, and rulings. In particular, the examiner should be familiar with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W. The examiner should also be familiar with the FR Y-8, *The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates,* and its instructions. The mandatory report is to be submitted to the Federal Reserve by (1) all top-tier bank holding companies (BHCs), including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The completed quarterly reports are used by the Federal Reserve System to monitor bank exposures to affiliates and to ensure banks' compliance with section 23A of the Federal Reserve Act. With regard to the BHC's inspection, the examiner should review and verify, since the previous inspection, the BHC's accuracy and comprehensiveness in its reporting based on the FR Y-8 report form and instructions.

If a subsidiary IDI of a holding company is not a state member bank, the bank's primary regulator should determine the bank's compliance with pertinent banking laws. In reviewing the subsidiary bank's examination report, any violations of laws and regulations applicable to intercompany transactions should be noted. If the violation resulted from the actions of an affiliate, the affiliate's role should be identified and be subject to criticism in the inspection report.

Violations of banking laws discovered during the inspection should be brought to management's attention and referred to the bank's primary supervisor. However, any action or criticism levied directly on the bank should come from the bank's primary supervisor.

2020.1.1 SECTION 23A OF THE FEDERAL RESERVE ACT

Section 23A of the Federal Reserve Act (FRA) (12 U.S.C. 371c) applies to all state member banks and FDIC-insured banks (including nonmember banks). In addition, section 301 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) made the provisions of section 23A applicable to savings associations as if they were member banks.

Section 23A of the FRA is designed to prevent the misuse of a bank's resources stemming from non-arm's-length transactions with its affiliates. Banks are prohibited, in accordance with section 23A, from engaging in "covered transactions" with an affiliate. The statute defines covered transactions to include an extension of credit and the purchase of assets.

Section 23A prohibits a bank from engaging in covered transactions with an affiliate unless—

1. the bank limits the aggregate amount of covered transactions to that particular affiliate to not more than 10 percent of the bank's capital stock and surplus and
2. a bank limits the aggregate amount of all covered transactions with all of its affiliates to 20 percent of the bank's capital stock and surplus.

An insured depository institution's capital stock and surplus for purposes of section 23A of the FRA is—

1. the sum of tier 1 and tier 2 capital included in an institution's risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the institution's most recent consolidated FFIEC Report of Condition and Income filed under 12 U.S.C. 1817(a)(3), and
2. the balance of an institution's allowance for loan and lease losses not included in its tier 2 capital for purposes of the calculation of risk-based capital by the appropriate federal banking agency, based on the institution's most recent consolidated FFIEC Report of Condition and Income filed under 12 U.S.C. 1817(a)(3).

In addition to the quantitative limitations on covered transactions with affiliates, there are specific prohibitions on the substance of the transaction:

1. A bank must conduct its transaction with its affiliate on terms and conditions that are consistent with safe and sound banking practices.[1]
2. A bank and its subsidiaries cannot purchase or accept as collateral a low-quality asset from an affiliate. A low-quality asset is an asset that is (1) classified "substandard," "doubtful," or "loss," or treated as "other loans especially mentioned" in the most recent report of examination prepared by either a federal or state regulatory agency; (2) carried in a nonaccrual status; (3) more than 30 days past due in the payment of principal or interest; or (4) renegotiated or compromised because of the deteriorating financial condition of the obligor.
3. A bank cannot accept securities issued by an affiliate as collateral for a loan to *any* affiliate.

Any transaction by a bank with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are transferred to, or used for the benefit of, the affiliate. With respect to any bank within a holding company, its affiliates include, among others, its parent, the parent's subsidiaries, and other companies directly or indirectly controlled by the bank's shareholders.

Section 23A covered transactions also are subject to the provisions of section 23B of the FRA. However, transactions between chain banks or "sister" banks are not subject to section 23B.

During the examination of a bank, transactions between a subsidiary bank and an affiliate are reviewed for compliance with sections 23A and 23B of the FRA and other banking regulations and statutes. Any violations of either section 23A or section 23B involving a transaction with a bank affiliate that are disclosed or found during the examination should be reported on the "Violations" report page of the inspection report.

1. Board staff has taken the position that safety and soundness requires that the transaction be conducted on market terms.

2020.1.1.1 Definition of an Affiliate

In general, companies that control or are under common control with a bank are defined by section 23A as "affiliates" of the bank.[2] The definition includes a bank subsidiary of a bank and any company that a bank, or its subsidiaries or affiliates, sponsors and advises.[3] For example, affiliates include bank, financial, and savings and loan holding companies and their subsidiaries. Banks, savings associations, and nonbanking companies that are under common individual control with the bank also are affiliates for the purposes of section 23A.

With respect to a bank, an affiliate means—

1. any company that controls[4] the bank and any other company that is controlled by the company that controls the bank;
2. any bank subsidiary of the bank;
3. any company—
   a. that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the bank or any company that controls the bank; or
   b. in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the bank or any company that controls the bank;
4. any company (including a real estate investment trust) that is sponsored and advised on a contractual basis by the bank or any subsidiary or affiliate of the bank, or any investment company, with respect to which a bank or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940; and
5. any company that the Board determines by regulation or order to have a relationship with a bank or any subsidiary or affiliate of the bank, such that covered transactions by the bank or its subsidiary with that company may be affected by the relationship to the detriment of the bank or its subsidiary.

The definition of affiliate does not include—

1. nonbank subsidiaries of a bank (other than a financial subsidiary), unless the Board determines not to exclude such subsidiary company from the definition of affiliate under item 5 above;
2. any company engaged solely in holding the premises of the bank;
3. any company engaged solely in conducting a safe deposit business;
4. any company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest; and
5. any company where control results from the exercise of rights arising out of a bona fide debt previously contracted, but only for the period of time specifically authorized under applicable state or federal law or regulation or, in the absence of such law or regulation, for a period of two years from the date of the exercise of such rights, subject, upon application, to authorization by the Board for good cause shown of extensions of time for not more than one year at a time, but such extensions in the aggregate shall not exceed three years.

The Gramm-Leach-Bliley Act (GLB Act) expanded the definition of affiliate to include financial subsidiaries of banks. A financial subsidiary is defined in the GLB Act as a subsidiary of a bank (1) that engages in activities that national banks are not permitted to engage in directly or that are conducted under terms and conditions that differ from those that govern the conduct of such activities by national banks, and (2) that a national bank is not specifically authorized to control by the express terms of a federal statute (other than section 23A of the FRA). (See 12 U.S.C. 371c(e)(2).)

The GLB Act also created a rebuttable presumption that a company or shareholder controls any other company if the company or shareholder directly or indirectly owns or controls 15 percent or more of the equity capital of the other company, pursuant to the merchant banking provisions of section 4(k)(4)(H) or (I) of the Bank Holding Company Act. (See 12 U.S.C. 371c(b)(11).) Under section 371c(b)(1) of the FRA, these companies ("portfolio companies") are affiliates under the statute.

2. It is not necessary for banks and nonbanking companies to be under common corporate ownership to be affiliates. For example, banks and nonbanking companies that are part of a chain banking organization are "affiliates" under section 23A.

3. The Board has the authority to expand the definition of affiliate to include a company that has a relationship with the bank so that covered transactions between the company and the bank may be affected by the relationship to the detriment of the bank.

4. "Control" is defined as the power to (1) vote 25 percent or more of the voting shares of a company, excluding situations in which the stock is controlled in a fiduciary capacity; (2) elect a majority of the directors of a company; or (3) exercise a controlling influence over a company.

2020.1.1.2 Covered Transactions

A covered transaction under section 23A of the FRA means—

1. a loan or extension of credit by a bank to an affiliate;
2. a purchase of, or an investment in, the securities of an affiliate by a bank or an affiliate of a bank;[5]
3. a bank's purchase of assets from an affiliate, including assets subject to an agreement to repurchase;
4. the acceptance by a bank of securities issued by an affiliate as collateral security for a loan or extension of credit by the bank to any person or company; or
5. the issuance by a bank of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate.

If a transaction between a bank and an affiliate cannot be determined to be within one of the above categories, it is not a covered transaction for the purposes of section 23A and is not subject to its limitations. For example, dividends or fees paid by a bank to its parent holding company are not covered transactions under section 23A.

2020.1.1.2.1 Leases

Lease transactions that constitute the functional equivalent of a loan or an extension of credit may be subject to section 23A. Such lease arrangements, in effect, are equivalent to a loan by the bank and are essentially financing arrangements. Some of the characteristics that would normally cause a lease to be construed as a loan equivalent include the lessee's having responsibility for the servicing, maintenance, insurance, licensing, or risk of loss or damage, and the lessee's having the option to purchase the equipment.

2020.1.1.2.2 De Facto Extensions of Credit

Other transactions may constitute de facto extensions of credit by a subsidiary bank to other members of the holding company family. For example, rent subsidies or use of a bank's personnel, funds, or equipment without adequate compensation may be de facto extensions of credit.

2020.1.1.2.3 Limitations of Amount—Valuations of Transactions

Section 23A(b)(7)(D) of the FRA defines as a covered transaction a bank's acceptance of securities issued by an affiliate as collateral security for a loan or extension of credit to any person or company. In a 1984 opinion, the Board's staff said that, for purposes of the quantitative limit in section 23A, the value of an extension of credit that is secured in any part by securities of an affiliate is the amount of the entire loan rather than the value of securities pledged as collateral.

The 1984 staff opinion has been revised. In situations in which a loan is secured by affiliate shares and other collateral, it is reasonable to reflect the fair market value of the nonaffiliate collateral in determining the applicability of the quantitative limits in section 23A to loans by a bank to an unaffiliated third party. For purposes of applying these quantitative limits, such mixed-collateral loans should be valued at the lesser of (1) the total value of the loan less the amount of nonaffiliate collateral (if any) marked to fair market value, or (2) the fair market value of the affiliate's shares that are used as collateral. Under this calculation method, if the loan is fully secured by collateral with a fair market value that equals or exceeds the loan amount (excluding the affiliate's shares), the loan would not be included in the bank's quantitative limits. If the loan is not fully secured by collateral excluding the affiliate's shares, the amount that the bank must count against its quantitative limits is the difference between the full amount of the loan and the fair market value of the nonaffiliate collateral, up to a maximum of the value of the affiliate's shares. This methodology takes account of the bank's reliance on the fair market value of nonaffiliate collateral in a loan transaction, while also recognizing that a portion of the loan may be supported by shares issued by an affiliate. If a portion of a loan is secured with nonaffiliate collateral that was marked to its fair market value, that part of the loan should not be subject to the quantitative limits of section 23A. (See *Federal Reserve Regulatory Service* (FRRS) 3-1199.)

Under section 23A(c)(4), the securities issued by an affiliate are not acceptable collateral for a

5. The investment by a bank or its affiliate in a financial subsidiary of the bank excludes the retained earnings of the financial subsidiary.

loan or extension of credit to any affiliate. Moreover, if the proceeds of the loan that are secured by the affiliate's shares are transferred to an affiliate by the third-party borrower to purchase assets or securities from the affiliate, the loan is treated as a loan to the affiliate. The loan must then be secured with collateral in an amount and of a type that meets the requirements of section 23A for loans by a bank to an affiliate. (See FRRS 3-1167.3.) Moreover, a loan that is secured with any amount of an affiliate's shares must be consistent with safe and sound banking practices.[6]

2020.1.1.2.4 Contributing Shares or Assets of a BHC Affiliate to a Bank

The holding company's contribution to a bank of the shares or assets of an affiliate may result in a "purchase of assets" under section 23A to the extent that consideration is given by the bank for the shares or assets it receives. The consideration may be given in the form of cash, a note booked by the bank as a receivable, or the assumption by the bank of the nonbank's liabilities owed to another affiliate. In addition, a bank's assumption of a liability to an unaffiliated party may also raise supervisory concerns. These transactions warrant particular scrutiny to ensure compliance with section 23A and to ensure that the transfer is not indicative of a broader liquidity problem of the holding company.

2020.1.1.3 Collateral for Certain Transactions with Affiliates

Section 23A also requires a bank's use of collateral for certain transactions between a bank and its affiliates.[7] Each loan or extension of credit to, or each guarantee, acceptance, or letter of credit issued on behalf of, an affiliate by a bank or its subsidiary must be secured at the time of the transaction by collateral having a market value equal to—

1. 100 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit, if the collateral is composed of—
   a. obligations of the United States or its agencies;
   b. obligations fully guaranteed by the United States or its agencies as to principal and interest;
   c. notes, drafts, bills of exchange, or banker's acceptances that are eligible for rediscount or purchase by a Federal Reserve Bank;[8] or
   d. a segregated, earmarked deposit account with the bank;
2. 110 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of obligations of any state or political subdivision of any state;
3. 120 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of other debt instruments, including receivables; or
4. 130 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of stock, leases, or other real or personal property.

2020.1.1.4 Limitations on Collateral

Banks may accept as collateral for covered transactions receivables, leases, or other real or personal property.[9] The following are limitations and collateral restrictions:

1. Any collateral that is subsequently retired or amortized must be replaced by additional eligible collateral. This is done, when needed, to keep the percentage of the collateral value relative to the amount of the outstanding loan or extension of credit, guarantee, acceptance, or letter of credit equal to the minimum percentage that was required at the inception of the transaction.
2. A low-quality asset is not acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, an affiliate.
3. Securities issued by an affiliate of a bank shall not be acceptable as collateral for a loan or extension of credit to, or for a guarantee,

6. Staff opinion of January 21, 1999 (FRRS at 3-1199).
7. The bank must perfect the security interest in the collateral (*Fitzpatrick v. FDIC,* 765 F.2d 569 (6th Cir. 1985). A bank, however, is not required by section 23A to secure a purchase of assets from an affiliate.
8. Regulation A includes a representative list of acceptable government obligations (12 C.F.R. 201.108).
9. Letters of credit and mortgage-servicing rights may not be accepted as collateral for purposes of section 23A. See FRRS 3-1164.3.

acceptance, or letter of credit issued on behalf of, that affiliate or any other affiliate of the bank.

4. The above collateral requirements are not applicable to an acceptance that is already fully secured either by attached documents or by other property having an ascertainable market value that is involved in the transaction.

2020.1.1.5 Derivative Transactions with Affiliates and Intraday Extensions of Credit to Affiliates

The GLB Act required the Board of Governors of the Federal Reserve System to adopt, by May 12, 2001, final rules under section 23A of the FRA that would address as covered transactions (1) credit exposure arising out of derivative transactions between member banks and their affiliates and (2) intraday extensions of credit by member banks to their affiliates (12 U.S.C. 371c(f)(3)). The Board adopted interim final rules to address these matters on May 3, 2001. The interim rules are effective January 1, 2002.

2020.1.1.5.1 Derivative Transactions Between Insured Depository Institutions and Their Affiliates

Derivative transactions between an insured depository institution and its affiliates generally arise from the risk-management needs of the institution or the affiliate. Transactions arising from the bank's needs typically occur when an institution enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract, or when the institution is unable to hedge the risk directly because it is not authorized to hold the hedging asset. To manage the market risk, the institution may have an affiliate acquire the hedging asset. The institution would then do a bridging derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between an insured depository institution and its affiliate are affiliate-driven. To accomplish its asset-liability-management goals, an institution's affiliate may enter into an interest-rate or foreign-exchange derivative with the institution. For example, an institution's holding company may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The holding company may then enter into a fixed-to-floating interest-rate swap with its subsidiary insured depository institution to reduce the holding company's interest-rate risk.

Insured depository institutions and their affiliates that seek to enter into derivative transactions for hedging (or risk-taking) purposes could enter into the desired derivatives with unaffiliated companies. Institutions and their affiliates often choose to use each other as their derivative counterparties, however, to maximize the profits of and manage risks within the consolidated financial group.

Derivative transactions between an insured depository institution and an affiliate are subject to section 23B of the FRA under the express terms of the statute.[10] In many respects, derivative transactions between an insured depository institution and an affiliate resemble section 23A covered transactions. Such transactions may expose an insured depository institution to the credit risk of its affiliates. Although the typical institution-affiliate derivative transaction does not create actual credit exposure for the institution at the inception of the transaction, an institution may incur actual credit exposure to an affiliate during the term of a derivative transaction, and it nearly always faces some amount of potential future exposure on the transaction. The credit exposure of a derivative transaction with an affiliate poses a risk to the safety and soundness of the depository institution that is similar in many respects to the risk posed by a loan to an affiliate. In fact, this credit exposure may be more volatile and indeterminate than the credit exposure created by a loan.

Considering the potential complexities, the Board adopted the interim rule on institution-affiliate derivative transactions. The interim rule clarifies that the transactions are subject to the market-terms requirement of section 23B of the FRA. The rule also requires that, under section 23A, an institution establish and maintain policies and procedures that are reasonably designed to manage in a safe and sound manner the credit exposure arising from the institution's derivative transactions with affiliates. The poli-

10. In addition to applying to covered transactions, as defined in section 23A of the FRA, the market-terms requirement of section 23B of the FRA applies broadly to, among other things, "[t]he payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise" (12 U.S.C. 371c-1(a)(2)(C)). Institution-affiliate derivatives generally involve a contract or agreement to pay money to the affiliate or furnish risk-management services to the affiliate.

cies and procedures must, at a minimum, provide for monitoring and control of the credit exposure arising from the institution's derivative transactions with each affiliate, and from all affiliates in the aggregate, and ensure that the institution's derivative transactions with affiliates comply with section 23B (12 C.F.R. 250.247). In addition, the interim rule defines the term "derivative transaction" to mean any derivative contract that is subject to the Board's capital adequacy guidelines (which would include most interest-rate, currency, equity, and commodity derivative contracts) and any similar derivative contract, including credit derivative contracts (12 C.F.R. 225, appendix A, at III. E.1. a–d).

To comply with section 23B of the FRA, each institution should have in place credit limits on its derivatives exposure to affiliates that are at least as strict as the credit limits the institution imposes on unaffiliated companies that are engaged in similar businesses and are substantially equivalent in size and credit quality. Similarly, each institution should monitor derivatives exposure to affiliates at least as rigorously as it monitors derivatives exposure to comparable unaffiliated companies. In addition, each institution should price and require collateral in its derivative transactions with affiliates in a way that is at least as favorable to the institution as the way in which it would price or require collateral in a derivative transaction with comparable unaffiliated counterparties.

At this time, the Board has not determined to subject all institution-affiliate derivative transactions to all the requirements of section 23A of the FRA. However, credit derivatives between an institution and an unaffiliated third party that reference the obligations of an affiliate of the institution and that are the functional equivalent of a guarantee by the bank on behalf of an affiliate should be treated as a guarantee by the institution on behalf of an affiliate for the purposes of section 23A.

2020.1.1.5.2 Intraday Extensions of Credit

As noted previously, the GLB Act required the Board to address as covered transactions under section 23A of the FRA the credit exposure arising from intraday extensions of credit by insured depository institutions to their affiliates. Depository institutions regularly provide transaction accounts to their affiliates in conjunction with providing payment and securities clearing services. As in the case of unaffiliated commercial customers, these accounts are occasionally subject to overdrafts during the day that are repaid in the ordinary course of business.

The interim rule clarifies that intraday extensions of credit by an insured depository institution to an affiliate are subject to the market-terms requirement of section 23B. The rule also requires that, under section 23A, institutions establish and maintain policies and procedures that are reasonably designed to manage the credit exposure arising from an institution's intraday extensions of credit to affiliates. The policies and procedures must, at a minimum, provide for monitoring and control of the institution's intraday credit exposure to each affiliate, and to all affiliates in the aggregate, and ensure that the institution's intraday credit extensions to affiliates comply with section 23B. (See 12 C.F.R. 250.248.)

2020.1.1.6 Statutory Exemptions

There are several exceptions to section 23A for transactions between banks and their affiliates. Except for the requirement that all transactions be on terms and conditions that are consistent with safe and sound banking practices, the provisions of section 23A are not applicable to the following transactions:

1. Any transaction between banks when 80 percent or more of each bank's voting shares are controlled by the same company or one bank controls 80 percent or more of the voting shares of the other bank.[11] The purchase of a low-quality asset is prohibited.

   Credit card banks insured by the Bank Insurance Fund (BIF), savings associations, and savings banks are banks for purposes of section 23A. Foreign banks are not banks for purposes of section 23A, and thus a transaction between a domestic bank and a foreign bank is not eligible for this exemption.
2. Making deposits in an affiliated bank or affiliated foreign bank in the ordinary course

11. Banks that are affiliated in this manner are referred to as "sister banks." Sister banks can thus improve their efficiency through intercorporate transfers under this exception. Also, "company" in this context is not limited to a bank holding company. For example, if a retail bank owns two credit card banks, the two credit card banks would be sister banks, although owned by a bank, and the sister-bank exception could be used for transactions between two credit card banks.

of correspondent business, subject to any restrictions that the Board may prescribe by regulation or order.

3. Giving immediate credit to an affiliate for uncollected items received in the ordinary course of business.
4. Making a loan or extension of credit to, or issuing a guarantee, acceptance, or letter of credit on behalf of, an affiliate that is fully secured by—
   a. obligations of the United States or its agencies,
   b. obligations fully guaranteed by the United States or its agencies as to principal and interest, or
   c. a segregated, earmarked deposit account with the bank.
5. Purchasing securities that are issued by any of the kinds of investments in entities described in section 4(c)(1) of the BHC Act.[12]
6. Purchasing assets that have a readily identifiable and publicly available market quotation, and that are purchased at that market quotation.
7. Subject to the prohibition on the purchase of low-quality assets, purchasing loans on a nonrecourse basis from affiliated banks.
8. Purchasing from an affiliate a loan or extension of credit that was originated by the bank and sold to the affiliate subject to a repurchase agreement or with recourse.[13]
9. A transaction between affiliated insured depository institutions if the transaction has been approved by the appropriate federal bank agency pursuant to the Bank Merger Act. (See 12 C.F.R. 250.241 (FRRS 3-1128).)

2020.1.1.7 Purchase of a Security by an Insured Depository Institution from an Affiliate

As discussed previously, section 23A of the FRA restricts the ability of a member bank to fund its affiliates through asset purchases, loans, or certain other transactions (referred to as ‘‘covered transactions’’). Paragraph (d)(6) of section 23A contains an exemption from the statute (the (d)(6) exemption) for ‘‘purchasing assets having a readily identifiable and publicly available market quotation,’’ if the purchase is at or below such quotation (item 6 above). Board staff traditionally has restricted the availability of the (d)(6) exemption to purchases of assets whose prices are routinely quoted in a widely disseminated publication, such as the *Wall Street Journal.* The Board adopted an interpretation of the (d)(6) exemption on May 3, 2001 (effective June 11, 2001), that expands the ability of an insured depository institution to purchase from a registered broker-dealer affiliate securities that, although not so widely traded as to warrant their prices being included in publications of general circulation, are actively traded and whose prices are quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks.

For a securities purchase to qualify under the interpretation, the security must be purchased from a broker-dealer affiliate that is registered with the Securities and Exchange Commission (SEC).[14] The following additional conditions must be met:

1. The security has a ‘‘ready market,’’ as defined in 17 C.F.R. 240.15c3-1(c)(11)(i).[15]
2. The security is eligible for a state member

12. This refers to the purchase of shares of a company that—
- holds or operates properties used substantially or entirely by any banking subsidiary in its operations or property acquired for such future use;
- conducts a safe deposit business;
- furnishes services to, or performs services for, the bank holding company or its banking subsidiaries; or
- liquidates assets acquired from the bank holding company or its banking subsidiaries or those that were acquired from any other source before May 9, 1956, or the date upon which the company became a bank holding company, whichever is later.

13. A sale of federal funds by a bank to an affiliate of the bank, unless the affiliate is a sister bank, is subject to the quantitative and collateral limitations of section 23A. (See 12 C.F.R. 250.160.) A transaction in federal funds involves a loan on the part of the ‘‘selling’’ bank and a borrowing on the part of the ‘‘purchasing’’ bank.

14. A purchase of securities or other assets from other types of affiliates would continue to be exempt under section 23A(d)(6) if the price of the asset is routinely quoted in a widely disseminated news source and the asset is purchased at or below its current market price. For example, gold is an asset that could meet the (d)(6) exemption.

15. The SEC defines a ‘‘ready market’’ to include a recognized established securities market (1) in which independent bona fide offers to buy and sell exist so that a price reasonably related to the last sales price or to current bona fide competitive bid and offer quotations can be determined for a particular security almost instantaneously, and (2) in which payment will be received in settlement of a sale at such price within a relatively short time, conforming to trade custom. (See 17 C.F.R. 240.15c3-1(c)(11)(i).) The types of securities that meet this definition include obligations of the United States and its agencies, as well as many asset-backed, corporate debt, and sovereign debt securities.

bank to purchase directly, subject to the same terms and conditions that govern the investment activities of a state member bank, and the institution records the transaction as a purchase of securities for purposes of the bank call report, consistent with the requirements for a state member bank.[16]
3. The security is not a low-quality asset as defined in section 23A(a)(3).
4. The security is not purchased during an underwriting, or within 30 days of an underwriting, if an affiliate is an underwriter of the security, unless the security is purchased as part of an issue of obligations of, or as obligations fully guaranteed as to principal and interest by, the United States or its agencies.
5. The security's price is quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks, provided that—
   a. the price paid by the insured depository institution is at or below the current market quotation for the security and
   b. the size of the transaction executed by the insured depository institution does not cast material doubt on the appropriateness of relying on the current market quotation for the security.
6. The security is not issued by an affiliate, unless the security is an obligation fully guaranteed by the United States or its agencies as to principal and interest.

The purchase of the security also must comply with paragraph (a)(4) of section 23A, which requires that any covered transactions between an insured depository institution and an affiliate be on terms and conditions that are consistent with safe and sound banking practices. (See 12 C.F.R. 250.246.)

2020.1.1.8 Board-Approved Exemptions from Section 23A

Section 23A gives the Board the authority to grant exemptions from the statute's restrictions if such exemptions are "in the public interest and consistent with the purposes of this section" (12 U.S.C. 371c(f)(2)). The Board has approved several exemptions. (See FRRS 3-1125 et seq.)

2020.1.1.8.1 Exemptions from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that "a transaction by a member bank with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate" (12 U.S.C. 371c(a)(2)). One respective interpretation and two exemptions, approved by the Board on May 3, 2001 (effective June 11, 2001), are discussed below.

2020.1.1.8.1.1 Loans to a Nonffiliate That Purchases Securities or Other Assets Through a Depository Institution Affiliate Agent or Broker

The Board issued an interpretation on an insured depository institution's loan to a nonaffiliate that purchases assets through an institution's affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit that an insured depository institution grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. On the other hand, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board thus granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee.

The interpretation would not apply if the securities or other assets purchased by the third-

16. The security will be eligible for the expanded (d)(6) exemption if it is eligible for purchase by a state member bank under section 9 of the FRA. The purchase must be recorded by the insured depository institution as a security purchased, and not as a loan, pursuant to the instructions of the bank call report. The interpretation is restricted to purchases of assets (purchase of eligible asset-backed securities) that are not low-quality assets.

party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to "any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or any other person" (12 U.S.C. 371c-1(a)(2)(D)). A market-rate brokerage commission or agency fee refers to a fee or commission that is no greater than that prevailing at the same time for comparable agency transactions the affiliate enters into with persons who are neither affiliates nor borrowers from an affiliated depository institution. (See 12 C.F.R. 250.243.)

2020.1.1.8.1.2 Loans to a Nonaffiliate That Purchases Securities from a Depository Institution Securities Affiliate That Acts as a Riskless Principal

The Board has granted an exemption from section 23A of the FRA for extensions of credit by an insured depository institution to customers who use the loan proceeds to purchase a security that is issued by a third party through a broker-dealer affiliate of the institution that acts as riskless principal. The exemption for riskless-principal transactions would not apply if the broker-dealer affiliate sold to the third-party borrower securities that were issued or underwritten by, or sold out of the inventory of, an affiliate of the depository institution. Riskless-principal trades, although the functional equivalent of securities brokerage transactions, involve the purchase of a security by the depository institution's broker-dealer affiliate. Accordingly, the broker-dealer retains the loan proceeds at least for some moment in time.

There is negligible risk that loans a depository institution makes to borrowers to engage in riskless-principal trades through a broker-dealer affiliate of the depository institution would be used to fund the broker-dealer. For this reason, the Board adopted an exemption from section 23A to cover riskless-principal securities transactions engaged in by depository institution borrowers through broker-dealer affiliates of the depository institution. This exemption is applicable even if the broker-dealer retains a portion of the loan proceeds as a market-rate markup for executing the riskless-principal securities trade.

2020.1.1.8.1.3 Depository Institution Loan to a Nonaffiliate Pursuant to a Preexisting Line of Credit and the Proceeds Are Used to Purchase Securities

The Board approved an exemption from section 23A for a loan by an insured depository institution to a nonaffiliate pursuant to a preexisting line of credit, in which the loan proceeds are used to purchase securities from a broker-dealer affiliate. The Board exempted extensions of credit by an insured depository institution to its customers that use the credit to purchase securities from a registered broker-dealer affiliate of the institution, so long as the extension of credit is made pursuant to, and consistent with any conditions imposed in, a preexisting line of credit. This line of credit should not have been established in expectation of a securities purchase from or through an affiliate of the institution. The preexisting requirement is an important safeguard to ensure that the depository institution did not extend credit for the purpose of inducing a borrower to purchase securities from or issued by an affiliate. In addition, the line of credit must be "preexisting," and the exemption may not be used in circumstances in which the line has merely been preapproved.

2020.1.1.9 Financial Subsidiaries and Section 23A

The GLB Act established several special rules for the application of section 23A to financial subsidiaries of a bank. First, the GLB Act provided that the 10 percent quantitative limit of section 23A does not apply to covered transactions between a bank and any individual financial subsidiary of the bank. A bank's covered transactions with its financial subsidiaries, however, are subject to the statutory 20 percent quantitative limit. Accordingly, a bank may engage in covered transactions with any individual financial subsidiary up to 20 percent of the bank's capital stock and surplus. For purposes of section 23A, the amount of a bank's investment in its financial subsidiary should not, however, include the retained earnings of the financial subsidiary.

Section 23A generally applies only to transactions between a bank and an affiliate of the bank and to transactions between a bank and a third party when some benefit of the transactions accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of or investment in the securities of a bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extension of credit made by a bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

2020.1.2 SECTION 23B OF THE FEDERAL RESERVE ACT

Section 23B of the FRA became law on August 10, 1987, as part of the Competitive Equality Banking Act of 1987. This section also regulates transactions with affiliates. Section 23B applies to any covered transaction with an affiliate, as that term is defined in section 23A, but excludes banks from the term "affiliate." Thus, transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B.[17] FIRREA made section 23B of the Federal Reserve Act, as well as section 23A, applicable to savings associations. The transactions covered by section 23B consist of the following:

1. Any covered transaction with an affiliate.
2. The sale of securities or other assets to an affiliate, including assets subject to an agreement to repurchase.
3. The payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise.
4. Any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or to any other person.
5. Any transaction or series of transactions with a third party if—
   a. an affiliate has a financial interest in the third party, or
   b. an affiliate is a participant in such transaction or series of transactions.

Any transaction by a bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or transferred to, the affiliate. A bank and its subsidiaries may engage in transactions covered by section 23B of the FRA, but only on terms and under certain circumstances, including credit standards, that are substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If comparable transactions do not exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonfinancial companies.

Section 23B restricts transactions with affiliates in the following situations:

1. A bank or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted (1) under the instrument creating the fiduciary relationship, (2) by court order, or (3) by law of the jurisdiction creating the fiduciary relationship.
2. A bank or its subsidiary cannot knowingly purchase or acquire any security during the existence of an underwriting or selling syndicate for that security, if an affiliate of the bank is a principal underwriter in the syndicate, unless the purchase was approved by a majority of the bank's directors before the security was initially offered for sale to the public. The purchase should be based on a determination that it is a sound investment for the bank, irrespective of the fact that an affiliate is a principal underwriter of the securities.

In addition, a bank or its affiliate cannot advertise or enter into any agreement stating or suggesting that it is in any way responsible for the obligations of its affiliates.

17. Although transactions between banks are exempt from section 23B, the safety-and-soundness provisions of section 23A(a)(4) apply and generally require that transactions be conducted on terms similar to those terms and standards outlined in section 23B.

2020.1.3 INSPECTION OBJECTIVES

1. To analyze and assess the financial impact of transactions (including loans and purchases of assets) between the subsidiary banks and their subsidiaries and all affiliates.
2. To determine whether covered transactions between a subsidiary bank (and its subsidiaries) and its affiliates in the holding company are conducted consistent with sections 23A and 23B of the FRA.
3. To determine if transactions between a subsidiary bank and its affiliates in the holding company are on terms and conditions and under circumstances, including credit standards, that are consistent with safe and sound banking practices and whether the terms and conditions of the transactions are the same as those that would be offered or applied to nonaffiliated companies.
4. To determine whether a subsidiary bank or its subsidiary has purchased low-quality assets or has purchased, as fiduciary, any securities or other assets from an affiliate in the holding company.
5. To determine whether a subsidiary bank, or any subsidiary or affiliate of the bank, has published any advertisement or has entered into any agreement that states or suggests that it will, in any way, be responsible for the obligations of affiliates.
6. To determine if securities were purchased or acquired by the subsidiary bank or its subsidiaries from an underwriting or selling syndicate affiliated with the bank and, if so, if the majority of outside directors of the bank approved the purchase or acquisition of securities before they were offered for sale to the public.
7. To confirm that the subsidiary bank or its subsidiary has not purchased as fiduciary any securities or other assets from a nonbank affiliate in the holding company unless the purchase was permitted in accordance with the instrument creating the fiduciary relationship, by court order, or by the law governing the fiduciary relationship.
8. To ascertain if any subsidiary bank (or its subsidiary) had knowingly purchased or acquired any security from an affiliate in which the principal underwriter of that security was a nonbank affiliate within the holding company organization.
9. To determine if the subsidiary bank and its subsidiaries have conducted transactions with their parent holding company or any other company affiliated in the holding company organization that are not in compliance with the restrictions in sections 23A and 23B of the FRA (for FDIC-insured nonmember banks, section 18(j) of the Federal Deposit Insurance Act (FDIA)).

2020.1.4 INSPECTION PROCEDURES

1. During the pre-inspection, perform the following activities:
   a. Review examination reports of subsidiary banks for comments on loans to affiliates, intercompany transactions, other transactions with affiliates, and violations of the restrictions of sections 23A or 23B of the FRA or, for FDIC-insured nonmember banks, section 18(j) of the FDIA.
   b. Review the most current FR Y-8 (Report of Intercompany Transactions) and interim reports for information on transactions with affiliates.
2. In the officer's questionnaire, request a list of subsidiary bank (and the subsidiaries of the bank) transactions with affiliates since the previous inspection, including the terms and any collateral, consisting of—
   a. a loan or extension of credit to the affiliate;
   b. a purchase or sale of an investment in securities issued by or sold to the affiliate, or a purchase or sale of other assets, including assets subject to an agreement to repurchase;
   c. the acceptance of securities issued by the affiliate as collateral security for a loan or extension of credit;
   d. the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit on behalf of an affiliate;
   e. the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise;
   f. transactions in which an affiliate acts as agent or broker or receives a fee for its services to the bank or to any other person;
   g. any transaction or series of transactions with a third party if—
      - the affiliate has a financial interest in the third party or
      - the affiliate is a participant in such transactions; and
   h. any transaction by a subsidiary bank or its subsidiary with any person, if the pro-

ceeds of that transaction are used for the benefit of, or transferred to, the affiliate.

3. During the inspection, perform the following activities:
   a. Review the listed transactions with affiliates provided in response to the officer's questionnaire.
   b. Review and determine that all transactions within the holding company organization comply with the restrictions on transactions with affiliates in sections 23A and 23B of the FRA (or in section 18(j) of the FDIA for FDIC-insured nonmember banks).
   c. Review all related documentation, terms, conditions, and circumstances for each transaction, including any resolutions for securities purchased (or established standards for securities purchased from affiliates).
   d. Determine the purpose and use of the proceeds.
   e. Review all outstanding guarantees, endorsements, or pledge agreements by the bank to support the affiliates' borrowings.
   f. Review, on a test-sample basis, advertisements and written agreements to ascertain whether the bank or any subsidiary or affiliate of the bank has stated or suggested that it shall be responsible for the obligations of any affiliates in the holding company organization.
   g. Review the holding company's policies and procedures regarding intercompany transactions of subsidiary banks.
4. Give additional attention to the following problems involving the BHC and its subsidiaries:
   a. The subsidiary bank would not have made the loan or would not have made the loan with such favorable terms and conditions, or engaged in any other covered transaction, except for the parent holding company's insistence due to the affiliate relationship.
   b. The bank's condition is weakened due to the extension of credit or the nature of the transaction with the affiliate.
   c. The affiliate has not provided adequate qualifying collateral to support the loan or extension of credit provided by the subsidiary bank.
   d. The loan, extension of credit, or transaction with an affiliate is not in compliance with the limits and restrictions in sections 23A or 23B of the FRA.
   e. Purchases of low-quality assets by a subsidiary bank or its subsidiaries from an affiliate, unless previously exempted by Board regulation or order, or unless the bank subsidiary or subsidiary affiliate, pursuant to an independent credit evaluation, had committed itself to purchase the low-quality assets before the time such asset was acquired by the affiliate.
   f. During the existence of any underwriting or selling syndicate, a subsidiary bank or its subsidiary has purchased or acquired a security from a bank affiliate or bank holding company affiliate, including an affiliated broker-dealer, and the principal underwriter of that security is an affiliate of the bank.
   g. The purchase or acquisition of securities (1) was not approved by a majority of the outside board of directors before the bank's securities were offered for sale to the public and (2) was not, in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would have been offered to, or would have applied to, nonaffiliated companies.
   h. The existence of advertisements or agreements that state or suggest that the bank, its subsidiaries, or affiliate will be responsible for the obligations of its affiliates.
5. Review any checking accounts and bank statements to check for overdrafts the parent company or any of its nonbank subsidiaries may have with a subsidiary bank.
6. Review the accounts payable to the subsidiary bank (or banks) and other accounts payable accounts for servicers, contractors, lessors, and other affiliates to determine if they arose as the equivalent of an extension of credit, purchase of securities or other assets, or as a liability to third parties. Ascertain whether those transactions were listed in response to the officer's questionnaire and whether the transactions were in accordance with the restrictions in sections 23A and 23B of the FRA.
7. Review the accounts receivable from the subsidiary bank (or banks) and other accounts receivable of other affiliates for sales of securities or other assets and for the payment of money or the furnishing of services. Ascertain whether those transactions were reported in response to the officer's

questionnaire and whether they are in accordance with the section 23A and 23B restrictions placed on transactions with affiliates.
8. Determine if subsidiary depository institutions have established and maintain policies and procedures to manage, in a safe and sound manner, the credit exposures of derivative transactions with affiliates and all affiliates in the aggregate.
9. Ascertain if the institution's credit limits, collateral requirements, and monitoring of its exposures to affiliates are at least as strict as those it imposes on unaffiliated companies.
10. Determine if the institution has policies and procedures to monitor and control the institution's intraday credit exposure to each affiliate and to all affiliates in the aggregate.
11. Determine if the institutions intraday extensions of credit to affiliates are on comparable market terms and that they comply with section 23B of the FRA.
12. Review all other transactions that the holding company organization has engaged in with its affiliated bank (or banks) and their subsidiaries, including lease arrangements, to determine whether they are subject to the restrictions in sections 23A and 23B, and, if so, whether they are in compliance.
13. Discuss the findings with appropriate senior management and, if findings are significant, the board of directors.
14. a. Determine management's actions regarding any comments raised by the bank's primary regulator in an examination report. If violations are disclosed in a subsidiary bank's examination report or during an inspection of the holding company, the examiner may criticize management on the ''Examiner's Comments and Matters Requiring Special Board Attention'' page of the inspection report for causing the bank to be in violation or for engaging in unsafe and unsound practices.
    b. If loans to or transactions with affiliates within the holding company organization appear to adversely affect a subsidiary bank, request management's assessment of such effects and its rationale for the transactions. Use of the ''Examiner's Comments and Matters Requiring Special Board Attention'' report page may be appropriate.

It is common practice for a bank to sell to or place with other banks loans that the bank itself has made to its customers. A loan participation is a share or part of a loan which entitles the holder to a pro rata share of the income determined by the extent of the holder's contribution to the original loan and a preference ordering for repayment. Such loans may be sold outright without liability to the selling bank in case of default by the borrower, or they may be sold with terms granting the purchasing bank recourse to the selling bank should the loans become uncollectible. Sales to or placement of loans with other banks are for the accommodation of either the selling or purchasing bank and are arranged for purposes of increasing the rate of return when loan rates differ between banks, achieving diversification of loans by type, and altering liquidity positions. It is also common practice for banks to sell or place with other banks those portions of individual loans that would be in excess of the bank's legal lending limit (overlines) if the total loan were retained. Participations of this type should be placed without recourse as a matter of prudent banking practice; otherwise, the purpose of compliance with the legal lending limitations would be defeated in the event of default.

Banks also sell or place loans or participations with their parent holding companies or nonbank affiliates. A BHC's purchase of loan participations from its subsidiary bank(s) generally constitutes the making of a loan or extension of credit within the meaning of section 225.28(b)(1) of Regulation Y, and as such, a bank holding company needs prior approval to purchase loan participations from its subsidiary bank(s).

A bank may participate in or purchase a loan originated by its parent holding company or one of its nonbank subsidiaries. A subsidiary bank's purchase, or participation of a loan, note, or other asset from an affiliate is considered a purchase of an asset from an affiliate within the meaning of section 23A of the Federal Reserve Act and thus is a "covered transaction" that is subject to the quantitative limitations and the prohibition against purchasing of low-quality assets. Subsidiary banks must make independent judgments as to the quality of such participations before their purchase to avoid compromising the asset quality of such banks for the benefit of other holding company entities. All loans and participations must be purchased on market terms.

A bank's purchase of a loan or loan participation from a bank holding company or its subsidiary may not be a covered transaction under section 23A if (1) the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan, (2) the bank agrees to purchase the loan prior to the affiliate making the loan, and (3) the bank's purchase of the affiliate's loans is not the primary source of funding for the affiliate.

In some cases, a bank may renew a loan or a participation that it purchased from another affiliated bank even when the original participation has become a low-quality asset. In some instances, a bank's renewal of a low-quality asset, such as a troubled agricultural loan, or an extension of limited amounts of additional credit to such a borrower may enable both the originating and participating banks to avoid or minimize potential losses. It would be inconsistent with the purposes of section 23A to bar a participating bank from using sound banking judgment to take the steps that it may deem necessary to protect itself from harm in such a situation, so long as the loan was not a low-quality asset at the time of the original participation and the participating bank does not assume more than its original proportionate share of the credit.

The following factors thus characterize the situation where it would be reasonable to interpret section 23A as not applying to the renewal of an otherwise low-quality asset:

1. the original extension of credit was not a low-quality asset at the time the affiliated bank purchased its participation,
2. the renewal and/or the extension of additional credit has been approved by the board of directors of the participating bank as necessary to protect the bank's investment by enhancing the ultimate collection of the original indebtedness, and
3. the participating bank's share of the renewal and/or additional loan will not exceed its proportionate share of the original investment. In addition, it is expected that, consistent with safe and sound banking practices, the originating bank would make its best efforts to obtain adequate collateral for the loan(s) to further protect the banks from loss.

Loans and loan participations by the various members of the holding company family to indi-

vidual borrowers or to the same or related interests may represent concentrations of credit which are large in relation to the holding company's consolidated capital position. These concentrations of credit should be assessed for potentially harmful exposure to the holding company's financial condition.

2020.2.1 INSPECTION OBJECTIVES

1. To determine the bank holding company's loan participation policy.
2. To assess the impact of a subsidiary bank's participation in loans with affiliates and to ensure that the bank's financial condition is not compromised and that the bank is not providing the funding needs of the affiliates, except within the parameters of sections 23A and 23B of the Federal Reserve Act.
3. To assess the impact of any concentrations of credit on the holding company's overall financial position.

2020.2.2 INSPECTION PROCEDURES

1. During the preinspection process, review each subsidiary bank's examination report for comments on participations with affiliates.
2. In the officer's questionnaire to the holding company, request the BHC's policy on loan participation. Request a list of any loan participations the holding company or the nonbank subsidiaries have with the subsidiary bank(s).
3. During the inspection, review the policy statements and each participation the holding company or the nonbank subsidiaries have with the subsidiary bank(s). The following characteristics should be analyzed:
   a. any repetitive transaction patterns which may indicate policy;
   b. the adequacy of credit information on file;
   c. the extent to which the terms of the participation including interest rates are handled in an arm's-length manner;
   d. the degree that the bank is accommodating the funding needs of the nonbank subsidiaries or its parent;
   e. the impact of these transactions on the subsidiary bank;
   f. eligibility for exclusion from section 23A restrictions and, if applicable, compliance with such restrictions.
4. Review participations among the bank holding company, nonbank subsidiaries, and the subsidiary banks to determine potentially adverse concentrations of credit.
5. Discuss with management—
   a. written and verbal policies regarding participations both within the holding company and with nonaffiliated third parties and
   b. any adverse findings on intercompany participations.
6. Comment on policy on the appropriate page of the inspection report (see section 5010.6). If any adverse comments on participations with affiliates are contained in a bank subsidiary's examination report, comment on their current status and the bank holding company's efforts to remedy the problem.

2020.2.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Limitations and restrictions	Section 23A(c), FRA 371c			
Purchase of loans from mortgage banking affiliates		250.250	3–1133	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Sales and transfers of assets between subsidiary banks and other entities in a bank holding company organization pose the potential of risk to the subsidiary banks. Asset purchases are covered by Section 23A and Section 23B of the Federal Reserve Act. The limitations state that all covered transactions, including asset purchases, by a bank with a single affiliate, may not exceed 10 percent of a bank's capital and surplus, and transactions with all affiliates may not exceed 20 percent of the bank's capital and surplus. In addition, all transactions must be conducted on market terms.

A bank's purchase of a loan or loan participation from a bank holding company or its subsidiary may not be a covered transaction under Section 23A if:

1. the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan;
2. the bank agrees to purchase the loan prior to the affiliate making the loan; and
3. the bank's purchase of the affiliate's loans is not the primary source of funding for the affiliate.

Sale and transfer of assets can also occur through swaps and spinoffs. Examples of such transactions which may have an adverse effect on a bank include the transfer of a profitable activity or subsidiary from the bank to the holding company, or the transfer of an unprofitable activity or subsidiary from the holding company to the bank. In addition, the transfer of a bank holding company subsidiary to a bank, whereby the bank assumes the liabilities of the affiliate raises supervisory concerns and may violate Sections 23A and 23B of the Federal Reserve Act.

Another example is the transfer of a subsidiary bank's deferred taxes, together with an equivalent amount of cash or earning assets, to the parent. In such a transaction, a subsidiary bank's liquidity position is weakened. All such transfers of deferred taxes must be reversed and the bank's asset and liability accounts restored to their level prior to the transfer. For a detailed discussion on transfers of a bank's deferred tax liability, see Manual section 2070.0.

A bank holding company may transfer a liquidating asset from a subsidiary bank to a section 4(c)(1)(D) liquidating subsidiary of the holding company. Also, pursuant to section 4(c)(3) of the Act, a BHC may transfer from a subsidiary bank an asset to be disposed of pursuant to the request of the bank's primary regulator. For more information on the transfer of such assets and the time parameters involved, refer to Manual section 3030.0.

The purchase of low-quality assets is prohibited by Section 23A of the Federal Reserve Act. Refer to section 2020.1.1.5 for a listing of transactions that are exempt from the limitations of Section 23A of the Federal Reserve Act.

2020.3.1 INSPECTION OBJECTIVES

1. To review intercompany sale and transfer of assets to assess the impact on the subsidiary bank.
2. To initiate corrective action to reverse the transaction, if necessary.

2020.3.2 INSPECTION PROCEDURES

1. During the preinspection process, review all notes to financial statements, the FR Y-8 report, and the examination reports of subsidiary banks to ascertain whether any purchase or transfer of assets has occurred between the subsidiary banks and the parent holding company or nonbank subsidiaries.
2. In the officer's questionnaire, request information on any transfer or sale of assets between the subsidiary bank and the parent holding company or the nonbank subsidiaries.
3. During the inspection, review all facts regarding any sale or transfer of assets transactions and assess their impact on the subsidiary bank. Examiners should determine:
   a. Whether the transaction required and received the approval of the bank's primary regulator; and
   b. The quality of the assets transferred or sold, and whether the sale of the assets was at a price significantly higher than would have been realized in an arm's-length transaction.
4. Discuss findings with management including:
   a. Apparent prejudicial transactions and violations of regulations; and
   b. Any unsound practices.

A compensating balance is a deposit maintained by a firm at a bank to compensate the bank for loans and lines of credit granted to the firm. Often, a commercial bank, when extending credit, requires an average deposit balance equal to a fixed percentage of the outstanding loan balance. Compensating balance requirements vary from informal understandings to formal contracts. Deposits maintained as compensating balances may be demand or time, active or dormant. Frequently, a lending bank will allow compensating balances to be supplied by a depositor other than the borrower itself. If compensating balances are maintained by a BHC's subsidiary bank on behalf of its parent, the practice is considered a diversion of bank income (i.e., the bank loses the opportunity to earn income on the balances that could be invested elsewhere). In general, this practice is inappropriate unless the bank is being compensated at an appropriate rate of interest. If the bank is not being appropriately reimbursed, the practice should be criticized and action taken to insure that the bank is compensated for the use of its funds.

BHCs borrow directly from nonaffiliated banks, using the proceeds for both bank and nonbank operations and investments. Also, bank holding companies seek credit lines from banks to back their borrowings in commercial paper markets and for other liquidity purposes. Nonbank subsidiaries of bank holding companies borrow from banks to fund activities such as mortgage banking, leasing and sales finance. In some cases, when a bank holding company or its nonbank subsidiaries borrow, the subsidiary bank's deposit at the lending institution may be accepted as a compensating balance for the borrowings of other members of the bank holding company organization. Such transactions raise questions under Section 23B of the Federal Reserve Act regarding the bank's compensation for such services.

Often the distinction between correspondent balances and compensating balances is not clear. Occasionally, the rate of the required compensating balance is written into the loan agreement; however, informal understandings usually appear to determine the amount of compensating balance maintained. At times, a balance may be identified in the bank's books as a compensating balance. A compensating balance may also be identified as an amount above a correspondent balance historically maintained by the bank. Compensating balances may also appear as a dormant account or may be the aggregate amount of a number of deposits of various subsidiary banks.

The interest rate on the loan to the holding company organization may also be helpful in determining the existence of compensating balances. Loans below the lending bank's normal rate may indicate that the lending bank is receiving compensation in another form.

At times, excess correspondent balances are maintained to encourage participation relationships and for other goodwill reasons. Therefore, the existence of excess balances may not always indicate that there is a compensating balance agreement.

Although a bank holding company may compensate its subsidiary banks for the use of the funds, the compensation may not equal the opportunity cost associated with providing the compensating balance. As a result, subsidiary banks which maintain compensating balances for holding company members may forego profit opportunities, and this practice may have a negative impact on the bank's earnings and capital adequacy. The amount of such compensation should be equal to a fair market rate.

If the lending bank has the right of offset to compensating balances maintained by the subsidiary bank in case of default by parent or nonbank subsidiaries, the subsidiary bank's funds are jeopardized. Such potential loss of funds should be commented on by the examiner.

2020.4.1 INSPECTION OBJECTIVES

1. To identify compensating balances maintained by a subsidiary bank for the parent holding company or any nonbank affiliate.
2. To determine whether the subsidiary bank is adequately reimbursed for the maintenance of any compensating balances.

2020.4.2 INSPECTION PROCEDURES

1. During the preinspection process:
   a. Review the subsidiary bank examination reports or contact management to determine whether the non-affiliated banks, lending to the holding company organization, are correspondents of the subsidiary banks. Where applicable, request detailed loan information which could

provide information on the compensating balances' terms required by the lending bank.

b. Review the notes to the financial statements and other available material, such as 10–K reports filed with the SEC, which may describe compensating balance agreements. FR Y–8 reports should be reviewed for questions applicable to compensating balances.

2. Review interbank loan agreements to determine whether compensating balances are formally required. Assess the terms of the loan to determine whether the loan appears to be at fair market rates for this type of credit request.

3. Request and review the account balance and monthly account statement provided by the lending bank to identify the amount of compensating balances. The statement should be available within the holding company or bank.

4. Request from management information regarding compensating balances maintained by subsidiary banks for the benefit of other affiliates.

5. Review the subsidiary bank's historical level of correspondent balances to assess trends. Compare levels of balances prior to any loan origination or interest rate changes.

6. Review intercompany accounts to determine the amount of compensation paid to the subsidiary bank for maintaining compensating balances. Assess adequacy of compensation. Assess impact of practice on the bank's financial condition.

7. Discuss with management the reasons for any apparent excess balances, and whether compensating balances are formally or informally required.

Dividends are a means by which a corporation distributes earnings or assets to its shareholders. Although the word ‘‘dividends’’ usually applies to funds paid out of net profits or surplus and is usually thought of in such a context, dividends can also be made ‘‘in kind,’’ which means in property or commodities. This section does not discuss ‘‘stock dividends’’ which represent transfers from retained earnings to paid-in capital rather than distributions of earnings. Dividends from the subsidiaries, both bank and nonbank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt service requirements and other obligations.

Dividends paid by any corporation are generally limited by certain State laws. Banks, however, are subject to further legal restrictions on dividends by their chartering authority and other regulators. Aside from the statutory limitations, the primary consideration in this area is the subsidiary’s level of capital and its ability to meet future capital needs through earnings retention.

Although there are no specific regulations restricting dividend payments by bank holding companies other than State corporate laws, supervisory concern focuses on the holding company’s capital position, its ability to meet its financial obligations as they come due, and its capacity to act as a source of financial strength to its subsidiaries. Some one-bank holding companies may be restricted in the amount of dividends they may pay as a result of certain limitations placed on future dividend distributions at the time of the holding company’s formation. (see Manual section 2090.2)

When analyzing the dividend practices of the subsidiaries and the parent company the following must be considered: the present level of capital in relation to total assets, risk assets, and classified assets; growth rates and additional plans for expansion; past earnings performance and projections; and the ability to service debt.

Aside from reasonable and timely fees for services rendered, the most appropriate way for funds to be paid by the bank to the parent is through dividends. This principle applies, in general, to bank payments of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is not considered an appropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.5.1 POLICY STATEMENT ON CASH DIVIDEND PAYMENTS

On November 14, 1985 the Board approved a policy statement on the payment of cash dividends by state member banks and *bank holding companies that are experiencing financial difficulties.* The policy statement addresses the following practices of supervisory concern by institutions that are experiencing earnings weaknesses, other serious problems, or that have inadequate capital:

- The payment of dividends not covered by earnings,
- The payment of dividends from borrowed funds,
- The payment of dividends from unusual or nonrecurring gains, such as the sale of property or other assets.

It is the Federal Reserve’s view that an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization’s capital position, or that can only be funded in ways that may weaken the organization’s financial health. In some instances, it may be appropriate to eliminate cash dividends altogether. The policy statement is as follows:

2020.5.1.1 Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies

The Board of Governors of the Federal Reserve System considers adequate capital to be critical to the health of individual banking organizations and to the safety and stability of the banking system. A major determinant of a bank’s or bank holding company’s capital adequacy is the strength of its earnings and the extent to which its earnings are retained and added to capital or paid out to shareholders in the form of cash dividends.

Normally, during profitable periods, dividends represent an appropriate return of a portion of a banking organization's net earnings to its shareholders. However, the payment of cash dividends that are not fully covered by earnings, in effect, represents the return of a portion of an organization's capital at a time when circumstances may indicate instead the need to strengthen capital and concentrate financial resources on resolving the organization's problems.

As a matter of prudent banking, therefore, the Board believes that a bank or bank holding company generally should not maintain its existing rate of cash dividends on common stock unless 1) the organization's net income available to common shareholders over the past year has been sufficient to fully fund the dividends *and* 2) the prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition. Any banking organization whose cash dividends are inconsistent with either of these criteria should give serious consideration to cutting or eliminating its dividends. Such an action will help to conserve the organization's capital base and assist it in weathering a period of adversity. Once earnings have begun to improve, capital can be strengthened by keeping dividends at a level that allows for an increase in the rate of earnings retention until an adequate capital position has been restored.

The Board also believes it is inappropriate for a banking organization that is experiencing serious financial problems or that has inadequate capital to borrow in order to pay dividends since this can result in increased leverage at the very time the organization needs to reduce its debt or increase its capital. Similarly, the payment of dividends based solely or largely upon gains resulting from unusual or nonrecurring events, such as the sale of the organization's building or the disposition of other assets, may not be prudent or warranted, especially if the funds derived from such transactions could be better employed to strengthen the organization's financial resources.

A fundamental principle underlying the Federal Reserve's supervision and regulation of bank holding companies is that bank holding companies should serve as a source of managerial and financial strength to their subsidiary banks. The Board believes, therefore, that a bank holding company should not maintain a level of cash dividends to its shareholders that places undue pressure on the capital of bank subsidiaries, or that can be funded only through additional borrowings or other arrangements that may undermine the bank holding company's ability to serve as a source of strength. Thus, for example, if a major subsidiary bank is unable to pay dividends to its parent company—as a consequence of statutory limitations, intervention by the primary supervisor, or noncompliance with regulatory capital requirements—the bank holding company should give serious consideration to reducing or eliminating its dividends in order to conserve its capital base and provide capital assistance to the subsidiary bank. . . .

This statement of principles is not meant to establish new or rigid regulatory standards; rather, it reiterates what for most banks, and businesses in general, constitutes prudent financial practice. Boards of directors should continually review dividend policies in light of their organizations' financial condition and compliance with regulatory capital requirements, and should ensure that such policies are consistent with the principles outlined above. Federal Reserve examiners will be guided by these principles in evaluating dividend policies and in formulating corrective action programs for banking organizations that are experiencing earnings weaknesses, asset quality problems, or that are otherwise subject to unusual financial pressures.

2020.5.2 INSPECTION OBJECTIVES

1. To assure compliance with statutes and the Board's November 1985, Policy Statement.
2. To determine reasonableness of dividend payout at both the subsidiary and holding company levels.

Depending on the type of charter and membership in the Federal Reserve, all insured commercial banks are subject to certain legal restrictions on dividends. In the case of nonbank subsidiaries and holding companies, there are no specific federal statutes, other than the policy statements discussed, which apply to dividend payments. State corporate laws would apply. One objective of the inspection process is to check for compliance with these laws and to follow-up on any violations.

In some cases dividends which comply with the regulations still may not be in the best interest of the bank. It is the examiner's responsibility to assess the reasonableness of dividend payments in relation to each subsidiary's capital

needs. Evaluation of the holding company's dividend policy and payment requires a review at both the parent company and the consolidated levels. On a consolidated basis the holding company's capital level in relation to the quantity and quality of total assets, earnings history and potential, and growth rates are important in the assessment of a reasonable dividend payout. At the parent level, the method of funding dividends should be reviewed. For example, a well capitalized corporation with strong earnings might pay dividends which could be considered unreasonable if the organization were in a strained liquidity position.

2020.5.3 INSPECTION PROCEDURES

1. Review dividend payments by subsidiaries and the parent company. Check for compliance with appropriate statutes and the Board's November 14, 1985 policy statement on the Payment of Cash Dividends. Discuss violations with management and comment on the "Examiner's Comments" page.

This step will often require a review of net earnings and changes in the capital accounts in the past years, as legal restrictions on dividends often apply to cumulative income for several years rather than just the year the dividend is actually paid. For this reason detailed working papers are important, as these can help to avoid duplications of effort at future inspections. In some situations the regulations provide that dividends may be paid in excess of current year's earnings. If prior approval from the bank's primary regulator is necessary, verify that it has been obtained. Any violations of dividend statutes should be discussed with management and cited in the "Examiner's Comments" page of the inspection report.

2. Analyze dividend payouts of subsidiaries and the parent in terms of capital adequacy, earnings and earnings potential.

Discuss excessive dividend payouts at any level with management and comment on the "Examiner's Comments" page of the inspection report. In assessing the reasonableness of dividend payments by subsidiaries and the holding company, the organization's capital adequacy and future capital needs must be judged with the following in mind: the volume of total assets; asset quality (the percentage of weighted classified assets to gross capital could be used as an indicator of quality); asset mix and liquidity; asset growth rates and projections; and plans for expansion and development of new areas. The subsidiary's or the holding company's ability to augment capital through earnings is also important. If a bank, nonbank or holding company has a consistently strong earnings record and its capital position is healthy, a higher dividend payout may be acceptable than would be otherwise. In analyzing the strength of earnings both quantity and quality must be considered. The actual quality of earnings and earnings potential are related to operating income rather than extraordinary items, significant capital or securities gains, or substantial increases resulting from tax considerations.

3. Review the funding of dividends paid by the holding company. Analyze the parent's cash flow and income statements in accordance with section 4010.0 of this manual. Discuss any inappropriate funding with management and comment on, based on their severity, either on the "Cash Flow Statement (Parent)," or the "Analysis of Financial Factors" and the "Examiner's Comments" pages.

An analysis of the parent company's cash flow statement supplemented by the income statement will identify the source of cash for dividend payments. The parent company has cash inflow from various sources including: dividends from subsidiaries, income from activities conducted for its own account, interest income on advances to subsidiaries, management and service fees, borrowings, and tax savings resulting from filing a consolidated tax return. Dividends should be internally funded from dividends paid by the subsidiaries, the parent company's earnings from activities for its own account or from interest income on advances to subsidiaries. Should the analysis of the cash flow statement indicate that dividends paid by the parent exceed cash inflow from these sources, further attention to the area is required to determine the actual underlying source of dividend funding. As discussed in the section on management and service fees, these are properly assessed at market value or cost of services rendered. They are not to be charged simply to divert income from subsidiaries in order to pay dividends. Borrowing to fund dividends is fundamentally an unsound practice.

When dividends paid by the holding company are funded by the bank subsidiary, it is possible to control indirectly the holding company's dividend payout level when it is determined to be detrimental to the bank subsidiary. It is important to remember that the primary responsibility of bank regulators is the promotion of safe and sound banking operations. Other

than the mentioned policy statement there are no specific federal laws restricting dividends paid by bank holding companies; however, the System's cease and desist authority over bank holding companies does afford the ability to curb excessive dividend payouts.

Whenever the examiner determines that dividend payments at the subsidiary level or parent level are not reasonable, are not in the best interest of the organization, or are not funded in a proper manner, discussion with management and a close look at its philosophy are essential. Remarks on the matter should appear on the "Examiner's Comments" page of the report.

2020.5.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Intercompany Transactions (Management and Service Fees) Section 2020.6

A bank holding company is permitted to own nonbank subsidiaries that furnish services to or perform services for its other subsidiaries pursuant to section 4(a)(2)(A), 4(c)(1)(C), or 4(c)(8) of the BHC Act. Many bank holding companies charge fees for providing to their subsidiaries services such as management advice, personnel services, data processing, marketing, supply administration, investment advice, bookkeeping, and trust services. The fees for these services that are assessed against subsidiary banks take many forms and are an area of potential abuse. In addition to direct fees paid to an affiliate, the compensation for providing these services might take the form of salaries or directors' fees paid to the bank holding company's management. A holding company should not, directly or indirectly through other subsidiaries, burden its bank subsidiaries with excessive fees or charge for services unrelated to value received in order to fund its debt service, dividend payments, or support of other subsidiaries.

Examiners should review the fees charged by a holding company's bank and nonbank subsidiaries to any banking subsidiary and judge the reasonableness of those fees by examining the reasonableness of the services provided and the basis for allocating fees. Fees charged nonbank subsidiaries and independent third parties should not be more favorable than fees charged banking subsidiaries. They should be reasonable and justifiable and be based on the fair market value of services provided or, when there is no market established for a particular service, on actual cost plus a reasonable profit. *The market value of similar services is the preferred basis of fee assessment.* When fees are based on cost plus a reasonable profit, there is less incentive for the efficient and effective use of resources, because a profit margin is built in regardless of the costs involved. In many situations, however, the cost method is the only method possible.

Any method of pricing services provided to bank subsidiaries that is based on anything other than value received is inappropriate. The fee mechanism should not be used to divert income from any bank subsidiary to meet the parent's financial needs if those needs are unrelated to the provision of services to that subsidiary. In addition, banks are prohibited from paying management fees* if it would cause the institution to become undercapitalized (see title I, section 131 of the FDIC Improvement Act of 1991 or section 38 of the FDIC Act).

Any fee for services to a banking subsidiary should be supported by evidence that the parent or other affiliate provided the service. Services provided by bank holding companies should serve the needs of the subsidiary bank; charges for services that appear to duplicate existing subsidiary-bank functions should be supported by a detailed explanation of the net benefit derived by the subsidiary bank and by an analysis of the reasonableness of the fee.

When it is impractical to allocate expenses on a direct-charge basis, bank holding companies frequently allocate overhead expenses to subsidiaries. Although this practice can be considered acceptable with regard to nonbanking subsidiaries, allocating all bank holding company expenses to bank subsidiaries is not permitted. The parent company should bear a portion of the costs connected with, for example, the holding company's investor/shareholder relations, regulatory reporting requirements, acquisitions, formations, applications, board of directors, and strategic planning. Bank holding companies are, however, expected to support their subsidiary banks, and expenses incurred to serve the needs of the subsidiary banks, such as expenses incurred in raising capital for subsidiary banks, can appropriately be allocated to those subsidiary banks that benefit from the services provided, in proportion to the benefit received from the service.

All fees for services rendered should be supported by written agreements that describe the service, the fees to be charged, and the method of allocating the fees among the subsidiaries. The absence of such contracts between the subsidiaries of the holding company is considered inappropriate and an unsafe and unsound banking practice. Supervisory action should be taken, in a manner consistent with the financial condition of the holding company and the subsidiary bank, to eliminate the improper practices. The practices should be criticized in the inspection report and actions taken to see that the situation is satisfactorily resolved. If the practices are having a serious impact on the bank, or if they might reasonably be expected to have a severe impact given the bank's financial condition, formal administrative action should be considered in order to require the holding company to terminate the practices and make restitution to the subsidiary bank.

* "Management fees" does not include fees for such services as electronic data processing or auditing.

A bank's prepayment of service fees to the parent company and payment of expenses incurred primarily in conjunction with holding company activities unconnected with the bank also are cause for supervisory concern. In general, prepayment for services is inappropriate unless the bank holding company can demonstrate that prepayment is standard industry practice for nonbanking companies acquiring the same service. Prepayment of sums for services that are not to be provided in the immediate future (for example, prepayment of an entire year's fees for services to be rendered throughout the year) can have an adverse impact on the bank and is therefore inappropriate. These practices should be addressed by requiring timely and reasonable payments for services and reimbursement to the banks for what are essentially holding company expenses. If bank expenses are incurred substantially in support of a holding company activity, the bank should be reimbursed for that portion of its cash outlay that benefits the holding company. Reimbursement is necessary to ensure that bank resources are not diverted to a holding company affiliate with little or no benefit to the bank.

Aside from reasonable and timely fees for services rendered, the most appropriate way, from a supervisory standpoint, for funds to be paid to the parent company is through dividends. This principle applies, in general, to bank payment of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is an inappropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.6.1 TRANSACTIONS SUBJECT TO FEDERAL RESERVE ACT SECTION 23B

Section 23B of the FRA applies to any covered transaction with an ''affiliate,'' as that term is defined in section 23A of the FRA. Section 23B also applies to a number of transactions that are not covered by section 23A, for example, transactions that involve the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise, or transactions in which an affiliate acts as an agent or a broker or receives a fee for its services. Although transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B, section 23A requires that covered transactions between a bank and an affiliate be conducted at arm's length. See section 2020.1.2 for other transactions that are covered by section 23B and the requirements that pertain to all such transactions. For examples of transactions that could violate section 23B, see section 3700.10, dealing with an application to provide armored car services through a bank holding company's nonbank subsidiary.

2020.6.2 INSPECTION OBJECTIVES

1. To determine whether the holding company and its subsidiaries charge fees to bank subsidiaries based on value received and fair market value.
2. To determine whether the subsidiaries are actually receiving these services.
3. To determine that the timing of fee payments is appropriate.
4. To determine whether there is an agreement between the entities relating to specific services and fees charged.
5. To determine if any fees result in an unsafe or unsound condition in any subsidiary bank.

Once the management policy underlying the fee structure is clearly understood, it is important for the examiner to determine that practice is consistent with policy. For example, if management indicates that fees charged are based on the fair market value of services received but the fee structure is actually geared to the bank subsidiary's asset size, an inconsistency exists. Assuming either that all of the bank subsidiaries have access to the same or similar markets for the services being provided by the bank holding company or that cost is used consistently to determine pricing, the established pricing structure should be used for all subsidiaries. Deviations from established policy intended to channel a greater proportion of income from financially sound banks to financially weak ones should be noted.

When it has been established that the fee structure is reasonable and is consistently followed, a final question remains. Are the bank subsidiaries actually receiving the services for which they are charged? This may be difficult to ascertain in many cases, but serious efforts must be made.

It is important that the basic business principles of an arm's-length transaction be applied to

all transactions between banks and their affiliates. This approach provides protection for all the interests involved. In addition, payment should be made within a reasonable time of the rendering of the services. It is inequitable for the bank subsidiary to pay fees far in advance in order to suit the parent's cash needs. A clearly understood agreement between the holding company and its bank subsidiaries detailing the duties and responsibilities of each party and the method to be used for fee assessment is also important to the servicing arrangement.

2020.6.3 INSPECTION PROCEDURES

1. Review and analyze the policy regarding management and other services provided to bank subsidiaries and the method of assessing fees.
2. Determine the basis for valuation.
3. Review the actual pricing structure as it is applied.
4. Verify the following:
   a. Fees are charged in accordance with pricing structure.
   b. Pricing structure is consistently applied for all bank subsidiaries.
   c. Bank subsidiaries are actually receiving services for which they are assessed. Determine whether fee payments have caused the institution to become undercapitalized.
   d. Payments are made in a timely manner.
5. Review examination reports on bank subsidiaries for comments on fee assessment.
6. Analyze the parent company's cash flow and income statements for intercompany fees.
7. Review recordkeeping.

A review of management's written or stated policy regarding services provided subsidiaries and fee assessment is a logical starting point for the analysis of this area. The policy should be discussed with the holding company's officers to ensure that the examiner has a clear understanding of the purpose and basic underlying philosophy. Any policy that calls for fee assessment based on standards other than fair market value or the cost of providing the services requires discussion with management and comment on page 1 of the report.

The determination of fair market value or cost of providing services is the responsibility of the holding company. The examiner should review the market or cost information used to justify the pricing of services and be satisfied that the data presented actually supports the fee structure. Request a copy of the pricing schedule as it is applied, and determine that it is actually based on the valuation of the services received and consistent with stated policy. Any variations from the basic structure among the bank subsidiaries would also require support from the market or cost data furnished.

Once the holding company's policy, valuation data, and pricing structure are analyzed, they should be verified. Check the service at the bank-subsidiary level. The verification process can be modified as deemed appropriate by the examiner.

Note the timing of payment for services. Fees for services should be billed and paid as they are received, just as they would be with an unaffiliated servicer. Prepayments are inappropriate in most cases.

Written service agreements should be in effect specifically detailing the types and extent of services being rendered and the method of pricing. Any significant exceptions found during the verification process merit follow-up and comments in the report.

Thus far, these inspection procedures for management and service fees have emphasized a review of management's stated intent and the actual fees charged on the individual bank-subsidiary level and have been somewhat oriented toward micro-level analysis. An overall view of the parent company's cash flow and income statements can also provide certain indicators of appropriateness of fees. The parent company should be servicing its debt and paying dividends from sources other than management fees and service fees collected from bank subsidiaries. If the ratio of management and service fees to parent-company salaries and other expenses significantly exceeds 100 percent, the holding company could be charging fees that are unrelated to the value of the service. This situation would call for further investigation.

2020.6.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Statement of practice and procedure in reference to unsound banking practices; diversion-of-bank-income practices (SR-79-533, March 19, 1979)			4–876	
Potential violations of section 23B of the Federal Reserve Act:				1993 FRB 352
1. Proposal by a bank holding company to provide armored car services to its banking subsidiary through a de novo nonbank subsidiary. The cost of the service would be more than the cost of armored car services currently received from an unaffiliated provider.				
2. Proposal whereby the bank holding company's de novo nonbanking subsidiary would pay a flat fee based on a percentage of its direct operating expenses to cover all the back-office services provided by the holding company's banking subsidiary.				

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The transfer of low-quality loans or other assets from one depository institution to another can be reason for supervisory concern. Such transfers may be made to avoid detection and classification during regulatory examinations, and may be accomplished through participations, purchases/sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Section 23A of the Federal Reserve Act prohibits bank purchases of low-quality assets from an affiliate. Examiners should be alert to situations where an institution's intention appears to be the concealment of low quality assets for the purpose of avoiding examination scrutiny and possible classification.

During bank holding company inspections, examiners are requested to identify situations where low-quality assets have been transferred between the institution being examined and another depository institution. Low-quality loans broadly defined include loans which are classified or specially mentioned, or if subjected to review would most likely be classified or specially mentioned, past due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower's poor financial condition, and any other loans which the examiner feels are of questionable quality. Other assets of questionable quality would include depreciated or sub-investment grade securities and other real estate. The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and may be a violation of section 23A of the Federal Reserve Act that should be addressed through formal supervisory enforcement action, if necessary.

Any situations involving the transfer of low-quality or questionable assets should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary Federal regulator(s) of the other depository institution(s) involved in the transaction. For example, Reserve Banks should notify the primary Federal regulator of any depository institution to whom a State member bank or holding company is transferring or has transferred low quality loans. Reserve Banks should also notify the primary regulator of any depository institution from which a State member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations and savings banks, as well as commercial banking organizations.

If it is determined that a transfer of assets was undertaken for legitimate reasons, the examiner should make certain that the assets have been properly recorded on the books of the acquiring institution at fair market value. If the transfer was with the parent holding company or a nonbank affiliate, determine that the transaction is also properly recorded on the books of the affiliate. Refer to SR Letter 83–24 (FIS).

2020.7.1 INSPECTION OBJECTIVES

1. To ensure that loan transfers involving state member banks, bank holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification, and to determine the effect of the transfer on the condition of the institution and to ascertain whether the transfer was consistent with the requirements of Section 23A. Under section 23A of the Federal Reserve Act, an asset purchase is a "covered transaction." All "covered transactions" by a bank with a single affiliate and with all affiliates combined may not exceed 10 percent and 20 percent, respectively, of a bank's capital and surplus.
2. To ensure that the primary regulator of the other financial institution involved in the transfer is notified.

2020.7.2 INSPECTION PROCEDURES

1. Investigate any situations where assets were transferred prior to the date of examination to determine if any were transferred to avoid possible criticism during the examination.
2. Determine whether any of the loans transferred were nonperforming at the time of transfer, classified at the previous examination, or for any other reason were considered to be of questionable quality.
3. Review the policies and procedures to determine whether or not assets or participations purchased are given an independent, complete and adequate credit evaluation. If a bank is a holding company subsidiary or a member of a chain banking organization, review asset purchases or participations from affiliates or other known members of the chain to determine if the asset purchases are given an *arms-length* and *independent* credit evaluation by the purchasing bank.
4. Determine whether or not any purchases

of assets from an affiliate are in conformance with section 23A which generally prohibits purchases of low-quality assets from an affiliate and limits asset purchases and all other "covered transactions" by a bank from a single affiliate and all affiliates combined to 10 percent and 20 percent, respectively, of a bank's capital and surplus.

5. Determine that any assets purchased are properly reflected at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any assets sold at less than book value.

6. Determine that transactions involving transfers of low- quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.

7. If poor quality assets were transferred to or from another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary Federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

- Name of originating and receiving institutions.
- Type of assets involved and type of transfer (i.e., participation, purchase/sale, swap).
- Date(s) of transfer.
- Total number and dollar amount of assets transferred.
- Status of the assets when transferred (e.g., nonperforming, classified, etc.)
- Any other information that would be helpful to the other regulator.

Intercompany Transactions (Trade Name or Royalty Fees) Section 2020.8

A bank holding company may be assessing trade-name or royalty fees on its subsidiary banks for their use of the holding company's name. Such holding companies may assert that the trade name-licensing agreements were created to achieve certain state tax benefits. They may also claim that such agreements were implemented to establish a basis for any damages that the company might seek if its trade name is used by an unauthorized third party. Further, consultants may try to market this practice to other bank holding companies.

Such payments are unlikely to bear any reasonable or justifiable relationship to any tangible asset or service provided by a holding company to a subsidiary bank. They are thus considered an improper diversion of bank income. If this practice is found during the course of an inspection, the practice should be stopped and examiners should direct the parent company to reimburse subsidiary banks for the fees paid. Depending on the materiality of the trade name or royalty fees, the Reserve Bank may also require restatement of regulatory filings. See SR-91-3.

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, or death benefit, or both. See SR-93-37 and its attachments for further discussion of the Federal Reserve's position on such arrangements between bank holding companies and their subsidiary banks.

2020.9.1 SPLIT-DOLLAR LIFE INSURANCE POLICY ARRANGEMENTS

Certain split-dollar life insurance policy arrangements involving banks and their parent bank holding companies raise legal and safety-and-soundness concerns. These arrangements fall into two general categories: (1) those in which the subsidiary bank owns the policy, pays all or substantially all of the premiums and is reimbursed for the premium payments (if at all) at some time in the future (endorsement plans) and (2) those in which the parent holding company owns the policy, and pays the premium, but uses the insurance policy as collateral for loans from its subsidiary bank (collateral assignment plans).

2020.9.1.1 Split-Dollar Life Insurance Endorsement Plan

Under an endorsement plan, the subsidiary bank purchases a policy in which its parent bank holding company or an officer, director, or principal shareholder thereof is the primary beneficiary, rather than the bank or one of its officers or directors. In this instance, the subsidiary bank receives only a limited portion of the death benefit—usually an amount equal to its premium payments plus interest. The primary beneficiary—the holding company or one of its officers, directors, or principal shareholders—receives a majority of the insurance proceeds but pays little or nothing for the benefit. Many of the policies in this category are single-premium universal life policies, whereby the subsidiary bank pays one large lump sum premium payment for the policy. Generally, a subsidiary bank involved in an endorsement plan records the cash surrender value of the policy as an asset on its books; the bank holding company does not record anything at the parent-only level.

A variation of the endorsement plan is an arrangement in which the bank pays an annual premium towards the policy and the parent holding company reimburses the bank for a nominal amount of the annual premium payments. These amounts are substantially lower than the premium payments made by the subsidiary bank and therefore do not accurately reflect the economic benefit derived by the holding company as primary beneficiary of the insurance policy.

2020.9.1.2 Split-Dollar Life Insurance Collateral Assignment Plan

Under a collateral assignment plan, the parent bank holding company owns the policy and pays the entire premium. The subsidiary bank makes annual loans to the bank holding company in an amount equal to the annual increase in the cash surrender value of the policy (or, in some cases, in amounts equal to premiums paid) with the policy itself serving as collateral for the loan. The loans are repayable at either the termination of employment or the death of the insured employee, and will be paid using the death benefits available from the policy.

2020.9.2 COMPLIANCE WITH APPLICABLE LAWS

2020.9.2.1 Compliance with Sections 23A and 23B of the FRA

Both of the aforementioned types of split-dollar life insurance policy arrangements may be inappropriate if they are inconsistent with sections 23A or 23B of the Federal Reserve Act (FRA). Section 23A places quantitative restrictions and other requirements on certain transactions, including loans, between banks and their affiliates. The statute also requires that loans between banks and their affiliates be secured with collateral having a specified market value that depends on the type of collateral used to secure the loan. Under an endorsement plan, where the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the subsidiary bank to its parent holding company generally results because the subsidiary bank has paid the bank holding company's portion of the premium, and the bank

will not be reimbursed fully for its payment until sometime in the future.

Under a collateral assignment plan, if the insurance policy held by the parent bank holding company serves as collateral to secure a loan from its subsidiary bank, the loan may be a violation of section 23A unless it meets the quantitative requirements of section 23A and the cash surrender value of the insurance policy used as security is equal to 130 percent of the amount of the loan. Thus, a bank loan to the parent bank holding company that equals the cash surrender value of the insurance policy that is serving as collateral would not be adequately secured under section 23A, unless additional collateral was provided.

Both categories of split-dollar life insurance policy arrangements may also lead to violations of section 23B of the Federal Reserve Act, which requires that certain transactions involving a bank and its affiliates be on terms and under circumstances substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. Because the bank holding company is the beneficiary of the life insurance policy, it is a participant in a transaction between a bank and a third party; therefore, the split-dollar life insurance transaction must meet the standards of section 23B.[1] In order to conform to the statutory restrictions of section 23B, the return to the bank from ownership of the policy should be commensurate with the size and nature of its financial commitment. In most split-dollar insurance arrangements, the bank makes an investment in the policy not for the purpose of insuring itself against risk but for the purpose of obtaining insurance for its holding company. The only return that the bank will get from its participation in ownership of the policy is the return of its initial investment and possibly some interest. However, the insurance company deducts the cost of maintaining the insurance coverage from interest that would otherwise be credited to the equity in the policy. These costs include policy loads, surrender charges, and mortality costs. The holding company should fully reimburse the bank for all of these charges. Examiners should carefully evaluate these arrangements because, in many cases, the reimbursement the bank receives from the holding company is based on an implied value of the insurance coverage received by the holding company that is less than the assessments made to the policy equity.

In the process of evaluating split-dollar insurance arrangements, examiners should keep in mind the fact that the advances made by a bank to purchase the insurance are the equivalent of a loan to the holding company. Therefore, to comply with section 23B, the terms of the loan, such as its duration and interest rate, must be on market terms.

1. The Federal Deposit Insurance Corporation has taken the same position in a published interpretive letter, FDIC 92-40, dated June 18, 1992.

2020.9.2.2 Investment Authority Under the National Bank Act

Participation by bank holding companies and their state-chartered and national bank subsidiaries in split-dollar life insurance policy arrangements may also raise concerns whether the policies are permissible bank investments under section 24(7) of the National Bank Act. The Office of the Comptroller of the Currency's interpretation of this provision of the National Bank Act (OCC Banking Circular 249, May 9, 1991).[2] In addition, under section 24 to the Federal Deposit Insurance Act, a state-chartered bank generally may not, without the FDIC's permission, engage in any activity that is impermissible for a national bank.[3]

2020.9.3 SAFETY-AND-SOUNDNESS CONCERNS

The purchase of a split-dollar life insurance policy may also constitute an unsafe and unsound banking practice involving the diversion of bank income or assets. If a subsidiary bank pays the entire insurance premium but is not the beneficiary, it provides an economic benefit to its parent holding company or other beneficiary for which it is not being adequately reimbursed or compensated. In this instance, the bank loses the opportunity to use its assets productively. Generally, the bank pays the premium in return for the insurance company's payment of the entire proceeds. When the bank receives less than the entire proceeds, it has, in effect,

2. National banks may not purchase life insurance as an investment. See OCC Banking Circular 249, for the tests under which life insurance may be purchased and held for noninvestment purposes.

3. SR-92-97 (FIS) and SR-92-98 (FIS), dated December 16 and 21, 1992, respectively, describe the provisions of section 24 of the Federal Deposit Insurance Act.

paid a higher than market price for whatever limited benefit it may receive. This is also the case when the primary beneficiary of the policy is an officer, director, or principal shareholder of the parent holding company. Such an arrangement is not consistent with safe and sound banking practices because the subsidiary bank is conferring an economic benefit on an insider of the parent bank holding company without receiving adequate compensation.

2020.9.4 EXAMINER REVIEW OF SPLIT-DOLLAR LIFE INSURANCE

Examiners should be fully aware of the problems inherent in split-dollar life insurance policy arrangements between bank holding companies and their subsidiary banks. During the course of all bank examinations and bank holding company inspections, examiners should review corporate life insurance policy arrangements for compliance with applicable banking laws and safety-and-soundness standards.[4] If a split-dollar life insurance policy arrangement exists in either a bank holding company or a state member bank, it should be reviewed and modified if it does not comply fully with the law and principles of safe and sound banking. If a bank holding company or a state member bank fails to take appropriate action to bring its split-dollar life insurance policy arrangements into compliance, then the Reserve Bank should consider appropriate follow-up supervisory action (including a formal enforcement action) against the banking organization or its institution-affiliated parties, or both.

2020.9.5 INSPECTION OBJECTIVES

1. To determine if split-dollar life insurance arrangements between the parent holding company and its subsidiary banks are consistent with the provisions of sections 23A and 23B of the FRA.

2. To ascertain whether participation by bank holding companies and their national bank or state-chartered bank subsidiaries is consistent with section 24(7) of the National Bank Act and section 24 of the Federal Deposit Insurance Act.

3. To verify the cash surrender values of split-dollar life insurance policies and to establish whether those values have been impaired by loans to, liens by, or assignments to, third parties or by unauthorized borrowings or cancellations.

2020.9.6 INSPECTION PROCEDURES

1. Review corporate life insurance policy arrangements between the parent company and its subsidiary banks.

  a. Determine if there are split-dollar life insurance arrangements between any subsidiary bank and the parent company or officers or directors of the parent company.

  b. If any such insurance arrangement exists, establish if the plan is either an endorsement plan or a collateral assignment plan.

  c. Review arrangements involving a split-dollar life insurance policy purchased by the parent company.

    (1) Review external documentation evidencing the cash surrender value. If no documentation exists, ask the audit committee and its internal auditors—

      (a) to obtain external documentation verifying its value and

      (b) to verify that there are no outstanding loans, liens, or assignments against the insurance policies.

    (2) Establish whether the parent company's board of directors has established policies and implemented procedures for transactions between the insurance carrier and the parent company to prevent unauthorized borrowing or cancellation of any insurance policy that has a cash surrender value.

    (3) Determine whether the corporate life insurance policy arrangements are consistent with applicable safety-and-soundness standards.

    (4) Verify that the recorded value of the respective asset is equal to the unimpaired cash surrender value of the asset.

2. If an endorsement plan arrangement is purchased by a subsidiary bank, establish whether the bank holding company is the beneficiary. If the parent company is the beneficiary, such an arrangement may result in an unsecured exten-

4. Examiners conducting examinations of U.S. branches and agencies of foreign banks and Edge corporations should also be alerted to the problems associated with split-dollar life insurance arrangements because these institutions could purchase insurance for the benefit of a parent foreign bank or company, or one of the parent's officers or directors. In addition, section 7(h) of the International Banking Act of 1978 prohibits state-licensed branches or agencies from engaging in any activity that is impermissible for a federal branch unless the Board determines that such activity is consistent with "sound banking practice" and, in the case of an FDIC-insured branch, the FDIC determines that the activity poses no significant risk to the deposit insurance fund.

sion of credit when the subsidiary bank pays all or substantially all of the insurance premiums but is not reimbursed until some time in the future. Ascertain if the investment return to the bank from ownership of the policy is commensurate with the size and nature of its financial commitment.

3. If a collateral assignment plan (when the insurance policy held by the parent company serves as collateral to secure a loan from a subsidiary bank), ascertain whether the cash surrender value of the insurance policy is equal to 130 percent of the amount of the loan.

4. For both types of split-dollar life insurance:

a. Determine if the investment return from ownership of the policy is commensurate with the size and nature of the financial commitment, including all costs incurred for maintaining the insurance coverage.

b. Determine if the terms (duration and market interest rate) of the advances made to purchase the insurance are on market terms.

c. If the bank holding company is the beneficiary of a bank insurance policy and a bank is a participant in the purchase of the insurance from a third party, determine if the transaction was on terms and under circumstances that were substantially the same as or at least as favorable to the bank as those then prevailing for comparable transactions with or involving nonaffiliated companies.

2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The history of bank holding company legislation reflects a principle that banking and commerce should be separated in order to prevent abuses in the distribution of credit. The 1956 Act generally required companies to divest their nonbank activities and shares within two years. In the 1970 Amendments, the same requirement applied to companies formed in the future. However, one-bank holding companies in existence at the time of these amendments were given a "grace period" to comply with divestiture requirements of the legislation. Those companies whose bank and nonbank interests had been combined on or before June 30, 1968, were permitted to continue the existing combination for an indefinite period (indefinite or permanent grandfather privileges). But those BHCs which existed at the time of the 1970 Amendments, but whose bank was acquired or whose nonbank activity was initiated after June 30, 1968, were permitted to continue their nonbank activities for only 10 years until December 31, 1980. An exception to the divestiture deadline existed with respect to certain real estate holdings.

Because of Congressional concern about the effectiveness of a divestiture, Congress included section 2(g) in the Act, and particularly subsection 2(g)(3) which treats the transfer of control. In this section, care is taken to eliminate possible control relationships between the company and its divested assets.

Although indefinitely grandfathered companies may continue to engage in nonbanking activities, these grandfather privileges are subject to review by the Federal Reserve Board at the time when a company's banking assets exceed $60 million.[1]

2030.0.1 INDEFINITE GRANDFATHER PRIVILEGES

Under the provisions of section 4(a)(2) of the Act, as amended in 1970, relating to grandfather privileges for certain nonbanking activities of bank holding companies, the Reserve Banks have been delegated the authority to determine that termination of grandfathered activities of a particular bank holding company is not warranted; provided, the Reserve Bank is satisfied that all of the following conditions are met:

1. The company or its successor is ''a company covered in 1970;''
2. The nonbanking activities for which indefinite grandfather privileges are being sought do not present any significant unsettled policy issues; and
3. The bank holding company was lawfully engaged in such activities as of June 30, 1968 and has been engaged in such activities continuously thereafter.

A company covered in 1970 is defined in section 2(b) of the Act as ''a company which becomes a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date.'' The Board has also determined that the company must have owned at least 25 percent of the voting shares of the same subsidiary bank on June 30, 1968, and December 31, 1970, in order to qualify as a company covered in 1970. If a company was not actively engaged in a nonbank activity prior to June 30, 1968, either directly, or indirectly through a subsidiary, it may still qualify for indefinite grandfather privileges if the company had entered into a binding contract prior to June 30, 1968. The binding contract must be a written document which specifies that the company (or its subsidiary) or persons representing the company will purchase another company which is already engaged in the activity.

Within two years after the subsidiary bank of an indefinitely grandfathered company attains banking assets in excess of $60 million, the status of the company's grandfather privileges is subject to review to determine whether the rights should remain in effect or be terminated. The Board or Reserve Bank may also review any company's grandfather privileges and terminate them if it determines that such action is necessary to prevent (1) undue concentration of resources, (2) decreased or unfair competition, (3) conflicts of interests, or (4) unsound banking practices. Moreover, when a company applies for approval of an acquisition, it may expect the Board or Reserve Bank to review the legitimacy of its grandfather privileges.

1. Effective October 20, 1981 the Board amended its Rules Regarding Delegation of Authority to delegate to the Reserve Banks authority to make these determinations regarding indefinite grandfather privileges.

2030.0.2 ACTIVITIES AND SECURITIES OF NEW BANK HOLDING COMPANIES

A company that becomes a bank holding company may, for a period of two years, engage in nonbanking activities and control voting securities or assets of a nonbank subsidiary, if the bank holding company engaged in such activities or controlled such voting securities or assets on the date it became a bank holding company. The Board can grant requests for up to three one-year extensions of the two-year period. This is in accordance with a December 1983 revision to Regulation Y (12 C.F.R. 225.22(e)). The regulatory provision implements Section 4(a)(2) of the BHC Act.

2030.0.3 LIMITATIONS ON EXPANSION OF GRANDFATHER RIGHTS FOR INSURANCE AGENCY NONBANKING ACTIVITIES OF BANK HOLDING COMPANIES

Refer to Manual section 3170.0.3.4.1.

2030.0.4 SUCCESSOR RIGHTS

When a bank holding company transfers its bank shares to another company in a manner that produces no substantial change in the control of the bank, the transferee qualifies under section 2(e) of the Act as a "successor." The "successor" provision prevents a bank holding company from transferring its bank to some other organization. A successor is considered a bank holding company from the date the transferor became a bank holding company. Thus, it may hold the same grandfather privileges as its predecessor. By the same token, it becomes subject to any conditions or restrictions, such as divestiture requirements, imposed by the System upon its predecessor. For example, an irrevocable declaration filed by the predecessor would be binding upon the successor.

2030.0.5 EXPANSION OF GRANDFATHER ACTIVITIES

Grandfather privileges apply to activities, not to companies. As a general rule, these activities are permitted to be expanded through internal growth; however, there are a few exceptions. See Appendix 1 in this section.

In Appendix 1 it is important to distinguish between a purchase in the ordinary course of business and a purchase, in whole or in part, of a going concern. Each of the following conditions must be satisfied in order for the transaction to be in the "ordinary course of business," which is permissible: (1) less than a substantial amount of the assets of the company to be acquired must be involved; (2) the operations of the purchased company must not be terminated or substantially discontinued; (3) the assets acquired must not be significant in relation to the size of the same line of nonbank activity already in the holding company (an acquisition is deemed significant if the book value of the acquired nonbank assets exceeds 50 percent of the book value of the nonbank assets of the holding company or nonbank subsidiary comprising the same line of activity); (4) if the transaction involves the acquisition of assets for resale, the sale must be a nominal business activity of the acquiring company; and (5) the major purpose of the transaction must not be to hire essentially all of the seller's principal employees who are expert, skilled and experienced in the business of the company being acquired. If any of these five conditions is not satisfied, the transaction may be considered to be an acquisition of a going concern, which is not permissible without prior approval. Refer to 12 C.F.R. 225.132.

2030.0.6 DIVESTITURES *(also see Manual section 2090.6)*

The act specifies the time in which a company must divest of any impermissible activity. Any company becoming a bank holding company subsequent to the 1970 Amendments has two years in which to divest its impermissible activity. The Act allowed a temporarily grandfathered company ten years from December 31, 1970, to divest of its impermissible activities, except certain real estate holdings discussed earlier; and allows indefinitely grandfathered companies ten years from the date on which grandfather privileges are terminated by the Board or Reserve Bank, should they be terminated for good cause.

As mentioned earlier, reviews of a company's grandfather privileges may be precipitated by such circumstances as: (1) a subsidiary bank of an indefinitely grandfathered company attaining assets in excess of $60 million (reviewed within two years); (2) a company seeking approval to engage in another activity or acquire another

bank; (3) a company which violates the Act; or (4) a company operating in a manner which results in an undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices.

When a company has filed an application requiring the Board's or Reserve Bank's approval, the Board or Reserve Bank may approve the application subject to the condition that the company divest of certain grandfathered shares or assets within a specified time period. The specified time period generally will be shorter than the aforementioned time periods stipulated in the Act.

The plan of divestiture should have provided for the removal of any control relationship between the company and its divested activities. These control requirements, as outlined in section 2(g) of the Act, include one or more of the following: (1) no interlocking directorates; (2) ownership of less than 25 percent of the voting shares by the BHC and related parties; (3) no interlocking management positions in policymaking functions; (4) no indebtedness between the transferor and the transferee; (5) no agreement or understanding which restricts the voting privileges of shares. Further discussion of these and other control requirements and issues is found in Manual sections 2090.1 and 2090.6.

2030.0.7 INSPECTION OBJECTIVES

1. To determine when the company acquired its subsidiary bank.
2. To determine when the company commenced its nonbanking activities and whether these activities were conducted continuously thereafter.
3. To determine if the banking assets of a bank controlled by a holding company with indefinite grandfather privileges have reached $60 million.
4. To determine if a change of ownership or control of the company has taken place, and whether the transferee qualifies as a "successor."
5. To determine if expansions of grandfathered activities occurred in accordance with the Act.

2030.0.8 INSPECTION PROCEDURES

1. If necessary, examine the subsidiary bank's stock certificate book to determine when the company acquired 25 percent or more of the bank.
2. Review the minute books and historical financial records of the company and its subsidiaries for evidence of the date of commencement of any nonbank activity and its continuation thereafter. In particular, the financial records should reflect the activity's impact as either an asset and/or an income item. From these records, also determine whether there has been expansion of the activity and whether such expansion complies with the Act.
3. If necessary, review the latest quarterly Call Report of Condition for the subsidiary bank to determine whether total assets exceeded $60 million. If appropriate, advise management that its grandfather status is subject to review.
4. If necessary, examine the stock certificate records and minutes of the bank or BHC to determine if the bank's shares have been transferred from one bank holding company to another in such a manner that the transferee qualifies as a successor.
5. Upon review of the aforementioned records, discuss the status of the company's grandfather privileges with the Reserve Bank's management, if necessary.
6. If divestment is required, encourage its execution as soon as possible during the divestment period. Request a divestment plan which specifies the manner by which divestment will be accomplished, the specific steps necessary to effect the divestment, and the time schedule for taking such steps. Advise management that failure to divest within the prescribed time period will be viewed as a violation of the Act.

2030.0.10 APPENDIX 1—EXPANSION OF GRANDFATHERED ACTIVITIES

Permissible Type of Expansion	*Without Approval*	*Requires Approval*
FOR COMPANIES WITH AN INDEFINITELY GRANDFATHERED NONBANK ACTIVITY		
1. Opening of additional offices of existing subsidiary	X	
2. Acquisition of assets in the "ordinary course of business" as defined	X	
3. Acquisition of a going concern:		
a. Additional shares of the grandfathered nonbanking subsidiary	X	
b. Additional shares of a nonbanking company which is regarded as an investment (generally companies in which the holding company has an interest of between 5 and 25 percent)		X
c. Initial acquisition of shares of any other company engaging in the activity		X

Commitments to the Board arise most often through the application process. Many commitments are included within the text of accompanying Board orders or letters transmitted to the applicants. Commitments can also arise through the supervisory process. Commitments should be specific and furnished in written form.

The most common type involves a commitment to inject capital (either equity or debt capital) into the company or subsidiary to be acquired or possibly into other subsidiaries of the bank holding company. The required injections may be for a specific dollar amount or for an unspecified amount necessary to achieve a predetermined capital relationship. Determining compliance with such commitments is generally not difficult since an agreed upon quantifiable result must be achieved.

Types of commitments made to the Board in the past include: divestiture of nonpermissible stock holdings or activities; introduction of new services; and reduction or elimination of dividends or management fees from subsidiaries.

Several of the above forms of commitments are rather difficult to monitor due to their inexact nature. The examiner should determine in such cases whether good faith compliance efforts have been made. Where an order approving an application imposes specific conditions, however, compliance is of the utmost importance since a conditional order is based on the theory that such conditions were necessary to eliminate or outweigh adverse factors. Willful noncompliance in these cases might necessitate the use of cease-and-desist powers to prevent evasion of the purposes of the Act. Pursuant to the Board's request, each Reserve Bank reports semi-annually on the status of all outstanding commitments made by holding companies in its District.

2040.0.1 INSPECTION OBJECTIVES

1. To determine that the bank holding company is taking the necessary steps to fulfill any outstanding commitments as scheduled.
2. To determine whether additional commitments or conditions should be imposed to achieve complete compliance.
3. To determine whether a request for an extension of time to fulfill any outstanding commitment is warranted.

2040.0.2 INSPECTION PROCEDURES

1. Review semi-annual commitment reports to the Board for commitments fulfilled since the last inspection. Determine whether such commitments were completed as required.
2. Review with management any actions taken to comply with outstanding commitments or plans to effect fulfillment.
3. If warranted, initiate action to consider an extension for compliance on outstanding commitments.

WHAT'S NEW IN THIS REVISED SECTION

This section was updated with minor revisions that resulted from the Financial Services Relief Act of 2006 (Relief Act) and the Board's approval of a final amendment of Regulation O on May 25, 2007 (effective July 2, 2007). (See 72 Fed. Reg. *30,470, June 1, 2007.) The Relief Act eliminated certain statutory reporting and disclosure requirements pertaining to insider lending by federally insured financial institutions. Sections 215.9, 215.10, and subpart B (sections 215.20 through 215.23) of Regulation O were deleted also as a result of the changes. (See 12 U.S.C. 375a and 375b, 12 U.S.C. 1972(2), and 12 C.F.R. 215.)*

2050.0.1 BHC OFFICIAL AND RELATED INTEREST TRANSACTIONS BETWEEN THE PARENT COMPANY OR ITS NONBANK SUBSIDIARIES

Business transactions between a parent bank holding company or its nonbank subsidiary and a BHC official or a BHC official's related interests require close supervisory review. "Bank holding company official" is defined as any director, executive officer, or principal shareholder of the parent company or any of its subsidiaries, excluding the subsidiary bank's nonbank subsidiaries.

Most of these transactions are soundly structured and have a legitimate business purpose that result in equitable treatment for all parties. However, examiners should pay close attention to all extensions of credit by a BHC or its nonbank subsidiary to a BHC official or related interest to ensure that the terms of the credit, particularly interest-rate and collateral terms, are not preferential and that the credit does not involve more than a normal risk of repayment.

An extension of credit by a BHC or nonbank subsidiary may be considered abusive or self-serving if its terms are unfavorable to the lender, or if the credit would not have been extended on the same terms absent the official relationship; that is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist. When a transaction appears questionable, a complete inquiry into the facts and circumstances should be undertaken so that a legal determination can be obtained.

In addition to the above supervisory considerations, the Sarbanes-Oxley Act of 2002 (Pub. L. No. 107-204) (the act) imposed certain insider lending restrictions on public companies, including BHCs that are public companies. A BHC generally is considered a public company for these purposes if it has a class of securities registered under section 12 of the Securities Exchange Act of 1934 (the 1934 act) or is required to file reports with the Securities and Exchange Commission (SEC) under section 15 of the 1934 act. The Sarbanes-Oxley Act[1] prohibits a publicly owned BHC (public BHC) and its subsidiaries from extending credit, or arranging for another entity to extend credit, in the form of a personal loan to any director or executive officer of the public BHC.[2] This prohibition does not apply to any extension of credit made before July 30, 2002, so long as the loan is not renewed or materially modified after that date.

The Sarbanes-Oxley Act includes two exceptions to this loan prohibition. First and most importantly, the prohibition does not apply to any loan made by an insured depository institution that is subject to the insider lending restrictions of section 22(h) of the Federal Reserve Act, as implemented by the Board's Regulation O. Thus, loans by the insured depository institution subsidiaries of a public BHC to a director or executive officer of the BHC likely are exempt from the prohibition, although they would be subject to Regulation O as discussed below. The second exception permits the directors and executive officers of a public BHC to obtain home improvement and manufactured home loans, consumer loans, and loans under open-end credit plans or charge cards from the public BHC or its subsidiaries, so long as the credit (1) is extended in the ordinary course of the company's consumer credit business, (2) is a kind of credit generally made available to the public, and (3) is made on market terms or on terms that are no more favorable than those offered to the general public.[2a]

1. See 15 U.S.C. 78m (section 402 of the act).

2. The act does not restrict lending by a subsidiary of a public BHC to the subsidiary's own directors and executive officers, so long as these persons are not also directors or executive officers of the public BHC.

2a. A registered broker-dealer that is a public company, or a subsidiary of a public company, also is not prohibited from providing margin credit to its employees to buy, trade, or carry securities if the credit is made in accordance with the

2050.0.2 TRANSACTIONS INVOLVING OTHER PROPERTY OR SERVICES

Other transactions involving BHC officials, their related interests, and the BHC and nonbank subsidiary that should be reviewed by the examiner include the—

1. purchase of assets or services from the BHC or nonbank subsidiary, particularly if at a discount or on preferential terms;
2. sale of assets or services to the BHC or nonbank subsidiary, particularly if at a premium;
3. lease of property to or from the BHC or nonbank subsidiary; and
4. use of BHC or nonbank subsidiary property or personnel by a BHC official or related interest.

As with loans and other extensions of credit to BHC officials on preferential terms, abusive or self-serving insider transactions involving other property or services deprive the BHC or nonbank subsidiary of higher returns or gains that may have been achieved had the same transaction been at a fair market price. A fair market price would be that price charged or received from an unaffiliated party.

A fair market price is often difficult to determine because the assets or services involved may be unique to a given situation and individuals. In general, the fair market price of even unique assets or services can be approximated by the cost of the assets or services to the party selling or furnishing them, if appropriate. The value of services or properties provided by a BHC or nonbank subsidiary should be established and justified either by policy or on a case-by-case basis, and appropriate documentation should be available to the examiner.

Services provided by a BHC official or a related interest to a BHC or nonbank subsidiary, while not unusual, may be most difficult to value. In part because of the problem of valuation, this type of transaction is among the most susceptible to abuse. The cost of providing services is frequently derived by placing value on the time of the individuals providing the services. When services are provided by a BHC official who normally places a very high billing value on time provided, the benefits to the BHC must be assessed in order to form a basis for determining a fair price. The BHC official may be a highly regarded professional whose time and services have great value to the organization. However, when the BHC requires routine clerical services, officials should not charge the BHC a professional-level rate for such services. Under these or similar circumstances, the BHC would be considered imprudent in paying such rates and could be subject to critical comment.

margin rules; is not made to purchase stock of the broker-dealer; and complies with the requirements set forth in (1), (2), and (3) above.

2050.0.3 REGULATION O

For ease of reference, certain Regulation O definitions and limitations, as revised by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), are presented here, some in abbreviated form. A thorough review of the entire regulation (found at FRRS 3–960), and the Board's press releases pertaining to Regulation O, is necessary for a complete understanding of the regulation. (Note that section 108 of the Financial Institutions Regulatory Act of 1978 amended section 18(j) of the Federal Deposit Insurance Act to make section 22(h) of the Federal Reserve Act applicable to nonmember insured banks.)

Purpose of Regulation O. Regulation O governs any extension of credit by a member bank and its subsidiaries (based on amendments contained in FDICIA, Regulation O also applies to nonmember insured depository institutions) to an executive officer, director, or principal shareholder of (1) the member bank, (2) a bank holding company of which the member bank is a subsidiary, and (3) any other subsidiary of that bank holding company. It also applies to any extension of credit by a member bank to (1) a company controlled by such a person and (2) a political or campaign committee that benefits or is controlled by such a person.

Supervision of BHCs and their nonbank subsidiaries. Regulation O deals exclusively with extensions of credit by banks and their subsidiaries, not extensions of credit by BHCs and their nonbank subsidiaries. However, because the regulations curtail or eliminate abusive transactions, they can be used as a guide or model in providing standards for the supervisory review of extensions of credit by BHCs and nonbank subsidiaries. Although a direct extension of credit by a BHC could not be determined to be a *violation* of Regulation O, if

the credit fails to meet the requirements that Regulation O establishes for banks, it may be possible to conclude that the BHC is engaging in either an unsafe or unsound practice that exposes the entire banking organization to undue risk and exposure to loss. Regulation O limits credit extensions by a bank to officials of that bank and their related interests; therefore, examiners should be especially alert to credit extensions from BHCs and nonbank subsidiaries. If credit extensions appear to circumvent the intent of Regulation O, they should be identified and discussed with management and noted in the inspection report for follow-up review and possible formal corrective action by regulatory authorities.

2050.0.3.1 FDICIA and BHC Inspection Guidance for Regulation O

On April 22, 1992, the Board adopted amendments to Regulation O, effective May 18, 1992, to implement the changes required by section 306 of FDICIA. Section 306 amended section 22(h) of the Federal Reserve Act and replaced the language of section 22(h) with the provisions of the Board's Regulation O. Section 306 also made several substantive modifications to section 22(h) that required revisions to Regulation O. These changes are outlined in the Board's press release and *Federal Register* notice of May 28, 1992 (57 *Fed. Reg.* 22,417).

The following are some of the more significant changes that were made effective May 18, 1992:[2b]

1. *Aggregate lending limit (section 215.4(d)).* The aggregate limit on the total amount that a bank can lend to its insiders and their related interests as a class was changed. In general, this amount is equal to the bank's unimpaired capital and unimpaired surplus. The Board also decided as a one-year interim measure to permit banks with deposits under $100 million to adopt a higher limit, not to exceed 200 percent of the bank's unimpaired capital and unimpaired surplus. (This interim period was extended twice by the Board, extending the higher limit through February 18, 1994, when the higher limit became permanent. The board of directors must provide an annual resolution authorizing the use of this higher limit. Other conditions also apply.)

2. *Lending limits for directors and related interests (section 215.4(c)).* Loans to directors (and their related interests) are subject to the same lending limit that is applicable to executive officers and principal shareholders (and their related interests).

3. *Credit standards (section 215.4(a)).* When lending to an insider[2c] a bank must follow credit underwriting procedures that are as stringent as those applicable to comparable transactions by the bank with persons outside the bank.

4. *Definition of "principal shareholder" (section 215.2(m)(1)).* The definition of *principal shareholder* was tightened for banks located in small communities. The previously existing 10 percent limitation was made applica-ble to all banks, regardless of the size of the communities in which they were located.[3]

5. *Definition of "member bank" (section 215.2(j)).* The term *member bank* was redefined to include any subsidiary of the member bank. This revision clarified that an extension of credit from a subsidiary of a member bank is subject to the same insider restrictions as an extension of credit from a member bank itself.

6. *Coverage of all companies that own banks (section 215.2(b)).* All companies that own banks became subject to Regulation O, regardless of whether they are technically bank holding companies.

7. *Prohibition on knowingly receiving unauthorized extensions of credit (section 215.6).* Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extension of credit not authorized by section 22(h) of the Federal Reserve Act.

8. *Reporting requirement for certain credit (section 215.12).* Executive officers and directors of member banks that do not have publicly traded stock are required to report annually to their institutions the outstanding amount of

2b. The Regulation O cites are to the February 18, 1994, amendment.

2c. The term *insider* refers to an executive officer, director, or principal shareholder, and includes any related interest of such a person.

3. The Board amended the definition of *principal shareholder of a member bank,* effective December 17, 1992, so that it does not include a company of which a member bank is a subsidiary. This amendment excludes from Regulation O loans to a company that owns, controls, or exercises a controlling influence over a member bank, as those relationships are defined in section 2(d) of the Bank Holding Company Act, as well as the related interests of such a parent bank holding company. The definition of *principal shareholder* for purposes of reporting obligations under section 215.11 of Regulation O was not changed as a result of the Housing and Community Development Act of 1992 because those portions of Regulation O implement provisions of law in addition to section 22(h) of the Federal Reserve Act.

any credit secured by shares of the insider's institution.

In a February 18, 1994, press release, the Federal Reserve Board announced its approval of a final rule that further amended several provisions of Regulation O, effective on that date. Some of the provisions carried out or further refined provisions of FDICIA. The amendments were designed to increase the ability of banks to make extensions of credit that pose minimal risk of loss, to eliminate recordkeeping requirements that impose a paperwork burden, and to remove certain transactions from the regulation's coverage consistent with bank safety and soundness. The amendments were expected to increase the availability of credit, particularly in communities served by small banks. The following is a discussion of some of the rule's primary provisions.

1. *Aggregate lending limit—exception for small, adequately capitalized banks (section 215.4(d)).* This revision of Regulation O made permanent an interim rule increasing the aggregate lending limit for small, adequately capitalized banks from 100 percent of the bank's unimpaired capital surplus to 200 percent, provided the bank satisfies three conditional criteria.

2. *Exceptions to the general limits on lending (section 215.4(d)(3)).* The Board adopted certain exceptions to the general restrictions on lending to insiders. The exceptions apply to loans fully secured by—

a. obligations of the United States or other obligations fully guaranteed as to principal and interest by the United States;

b. commitments or guarantees of a department or agency of the United States; or

c. a segregated deposit account with the lending bank.

An exception is also made for loans arising from the discount of installment consumer paper by an insider with full or partial recourse endorsement or guarantee by the insider, if the maker of the paper is not an insider and the loan was made relying primarily on the maker and this is properly documented. Such loans continue to be subject to the prohibitions against preferential lending.

3. *Including closing costs in the refinancing of home mortgage loans (section 215.5(c)(2)).* Section 22(g) of the Federal Reserve Act allows a bank to make a loan to its executive officer, without restrictions on the amount, if the loan is secured by a first lien on a dwelling that is owned and used by the executive officer as a residence after the loan is made. The Board's amendment includes the refinancing of home mortgage loans in this category only if the proceeds are used to pay off the previous home mortgage loan or for the other purposes listed in this section. The regulation states that closing costs can be included as part of the exempt portion of a home mortgage refinancing.

4. *Alternative recordkeeping procedures (section 215.8).* Banks are permitted to follow alternative recordkeeping procedures on loans to insiders of affiliates. The amendment allows a bank to decide on its own how to gather information on related interests, so long as its method is effective. For example, a nonbank credit card bank or other bank that does not make commercial loans could decide not to keep records on related interests. For banks that make commercial loans, one of two acceptable methods is required, unless a bank can demonstrate that another method is equally effective: (a) the "survey" method or (b) the "borrower inquiry" method. Every bank, regardless of the recordkeeping method it selects, must conduct an annual survey to identify *its own insiders*, but not those of its holding company affiliates. Every bank is expected to check this short list before extending credit, even if it is using the borrower-inquiry method of recordkeeping for affiliates in lieu of the survey method.

5. *Tangible-economic-benefit rule (section 215.3(f)).* This rule was similar to a provision in section 23A of the Federal Reserve Act and was adopted at a time when the Board was required by section 22(h) of the Federal Reserve Act to use the definition of "extension of credit" found in section 23A. However, the definition of extension of credit in section 22(h) is no longer tied to section 23A. The Board has therefore revised the tangible-economic-benefit rule to clarify that it does not reach certain transactions that may benefit an insider. The Board explicitly provided that the rule does not apply to an arm's-length extension of credit by a bank to a third party where the proceeds of the credit are used to finance the bona fide acquisition of property, goods, or services from an insider or an insider's related interest.

2050.0.3.2 Definitions in Regulation O (abbreviated listing)

Note: Regulation O definitions, prohibitions, exceptions, and exemptions are particularly detailed and complex. Therefore, inspection staff should consult with Reserve Bank or Board

supervisory or legal staff before discussing with management or presenting in an inspection report any BHC inspection findings that rely upon Regulation O.

(a) "Affiliate" means any company of which a member bank is a subsidiary or any other subsidiary of that company.

(b) "Company" means any corporation, partnership, trust (business or otherwise), association, joint venture, pool syndicate, sole proprietorship, unincorporated organization, or any other form of business entity. The term, however, does not include (1) an insured bank (as defined in 12 U.S.C. 1813) or (2) a corporation the majority of the shares of which are owned by the United States or by any state.

(c)(1) "Control of a company or bank" means that a person directly or indirectly, or acting through or in concert with one or more persons (i) owns, controls, or has the power to vote 25 percent or more of any class of voting securities of the company or bank; (ii) controls in any manner the election of a majority of the directors of the company or bank; or (iii) has the power to exercise a controlling influence over the management or policies of the company or bank. (Note: If a company does not have voting securities (that is, a partnership), review the degree of interest in the company to determine control.)

(2) A person is presumed to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank if (i) the person is an executive officer or director of the company or bank and directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank or (ii) the person directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank, and no other person owns, controls, or has the power to vote a greater percentage of that class of voting securities.

(3) An individual is not considered to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank solely by virtue of the individual's position as an officer or director of the company or bank.

(d) "Director" of a company or bank means any director of the company or bank, whether or not receiving compensation.[3a] An advisory director is not considered a director if the advisory director (1) is not elected by the shareholders of the bank or company, (2) is not authorized to vote on matters before the board of directors, and (3) provides solely general policy advice to the board of directors.

(e)(1) "Executive officer" of a company or bank means a person who participates or has authority to participate (other than in the capacity of a director) in major policymaking functions of the company or bank, whether or not the officer has an official title; the title designates the officer an assistant; or the officer is serving without salary or other compensation.[4] The chairman of the board, the president, every vice president, the cashier, the secretary, and the treasurer of a company or bank are considered executive officers, unless the officer is excluded, by resolution of the board of directors or by the bylaws of the bank or company, from participation (other than in the capacity of a director) in major policymaking functions of the bank or company, and the officer does not actually participate therein.

(2) Extensions of credit to an executive officer of an affiliate of a member bank (other than a company that controls the bank) are not

3a. Extensions of credit to a director of an affiliate of a bank are not subject to the general prohibitions (section 215.4), the prohibitions on knowingly receiving unauthorized extensions of credit (section 215.6), and the alternative recordkeeping procedures (section 215.8) if—

(1) the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the director does not actually participate in those functions;

(2) the affiliate does not control the bank; and

(3) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the director of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (1) include the director (by name or by title) in a list of persons excluded from participation in such functions or (2) not include the director in a list of persons authorized (by name or by title) to participate in such functions.

4. The term "executive officer" is not intended to include persons who may have official titles and may exercise a certain measure of discretion in the performance of their duties, including discretion in the making of loans, but who do not participate in determining major policies of the bank or company and whose decisions are limited by policy standards fixed by the senior management of the bank or company. For example, the term does not include a manager or assistant manager of a branch of a bank unless that individual participates, or is authorized to participate, in major policymaking functions of the bank or company.

subject to sections 215.4, 215.6, and 215.8 of Regulation O if—

(i) the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the executive officer does not actually participate in those functions;

(ii) the affiliate does not control the bank; and

(iii) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the executive officer of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (i) include the executive officer (by name or by title) in a list of persons excluded from participation in such functions or (ii) not include the executive officer in a list of persons authorized (by name or by title) to participate in such functions.

(f) ‘‘Immediate family’’ means the spouse of an individual, the individual's minor children, and any of the individual's children (including adults) residing in the individual's home.

(g) ‘‘Insider’’ means an executive officer, director, principal shareholder, and any related interest of such person.

(h) The ‘‘lending limit’’ for a member bank is an amount equal to the limit on loans to a single borrower established by section 5200 of the Revised Statutes,[5] 12 U.S.C. 84. This amount is 15 percent of the bank's unimpaired capital and unimpaired surplus in the case of loans that are not fully secured, and an additional 10 percent of the bank's unimpaired capital and unimpaired surplus in the case of loans that are fully secured by readily marketable collateral having a market value, as determined by reliable and continuously available price quotations, at least equal to the amount of the loan. The lending limit also includes any higher amounts that are permitted by section 5200 of the Revised Statutes for the types of obligations listed therein as exceptions to the limit.

A member bank's *unimpaired capital* and *unimpaired surplus* equals the (1) member bank's tier 1 and tier 2 capital included in the bank's risk-based capital, under the capital guidelines of the appropriate federal banking agency, and (2) balance of the member bank's allowance for loan and lease losses that was not included in the bank's tier 2 capital. This computation is based on the bank's risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the bank's most recent consolidated report of condition filed under 12 U.S.C. 1817(a)(3).

(i) ‘‘Member bank’’ means any banking institution that is a member of the Federal Reserve System, including any subsidiary of a member bank. The term does not include any foreign bank that maintains a branch in the United States, whether or not the branch is insured (within the meaning of 12 U.S.C. 1813(s)) and regardless of the operation of 12 U.S.C. 1813(h) and 12 U.S.C. 1828(j)(3)(B).

(j) ‘‘Person’’ means an individual or a company.

(k) ‘‘Principal shareholder’’[6] means an individual or a company (other than an insured bank) that directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote more than 10 percent of any class of voting securities of a member bank or company. Shares owned or controlled by a member of an individual's immediate family are considered to be held by the individual. A principal shareholder of a member bank includes (1) a principal shareholder of a company of which the member bank is a subsidiary and (2) a principal shareholder of any other subsidiary of that company, exclusive of nonbank subsidiaries of member banks.

(*l*) ‘‘Related interest’’ means (1) a company that is controlled by a person or (2) a political or campaign committee that is controlled by a person or the funds or services of which will benefit a person.

5. Where state law establishes a lending limit for a state member bank that is lower than the amount permitted in section 5200 of the Revised Statutes, the lending limit established by the applicable state laws shall be the lending limit for the state member bank.

6. On October 28, 1992, in section 955 of the Housing and Community Development Act of 1992, Congress amended section 22(h) of the Federal Reserve Act to exclude from the definition of *principal shareholder* a company of which a member bank is a subsidiary. Regulation O was amended, effective December 17, 1992, to implement this change. As a result of the amendment, extensions of credit by a bank to its holding company and to any related interests of its subsidiary are governed solely by sections 23A and 23B of the Federal Reserve Act.

(m) "Subsidiary" has the meaning given in section 2(d) of the BHC Act, but does not include a subsidiary of a member bank.

2050.0.3.2.1 Extension of Credit

For the purposes of Regulation O, an "extension of credit" is a making or renewal of any loan, a granting of a line of credit, or an extending of credit in any manner whatsoever, and includes—

(1) a purchase under repurchase agreement of securities, other assets, or obligations;

(2) an advance by means of an overdraft, cash item, or otherwise;

(3) issuance of a standby letter of credit (or other similar arrangement regardless of name or description) or an ineligible acceptance;

(4) an acquisition by discount, purchase, exchange, or otherwise of any note, draft, bill of exchange, or other evidence of indebtedness upon which an insider may be liable as maker, drawer, endorser, guarantor, or surety;

(5) an increase of an existing indebtedness, but not if the additional funds are advanced by the bank for its own protection for (i) accrued interest or (ii) taxes, insurance, or other expenses incidental to the existing indebtedness;

(6) an advance of unearned salary or other unearned compensation for a period in excess of 30 days; and

(7) any other similar transaction as a result of which a person becomes obligated to pay money (or its equivalent) to a bank, whether the obligation arises directly or indirectly, or because of an endorsement on an obligation or otherwise, or by any means whatsoever.

An extension of credit *does not* include—

(1) an advance against accrued salary or other accrued compensation, or an advance for the payment of authorized travel or other expenses incurred or to be incurred on behalf of the bank;

(2) a receipt by a bank of a check deposited in or delivered to the bank in the usual course of business unless it results in the carrying of a cash item for or the granting of an overdraft (other than an inadvertent overdraft in a limited amount that is promptly repaid under terms that are not more favorable than those offered to the general public).

(3) an acquisition of a note, draft, bill of exchange, or other evidence of indebtedness through (i) a merger or consolidation of banks or a similar transaction by which a bank acquires assets and assumes liabilities of another bank or similar organization or (ii) foreclosure on collateral or similar proceeding for the protection of the bank, provided that such indebtedness is not held for a period of more than three years from the date of the acquisition, subject to

extension by the appropriate federal banking agency for good cause;

(4)(i) an endorsement or guarantee for the protection of a bank of any loan or other asset previously acquired by the bank in good faith or (ii) any indebtedness to a bank for the purpose of protecting the bank against loss or of giving financial assistance to it;

(5) indebtedness of $15,000 or less arising by reason of any general arrangement by which a bank (i) acquires charge or time credit accounts or (ii) makes payments to or on behalf of participants in a bank credit card plan, check credit plan, or similar open-end credit plan, provided—

(A) the indebtedness does not involve prior individual clearance or approval by the bank other than for the purposes of determining authority to participate in the arrangement and compliance with any dollar limit under the arrangement, and

(B) the indebtedness is incurred under terms that are not more favorable than those offered to the general public;

(6) indebtedness of $5,000 or less arising by reason of an interest-bearing overdraft credit plan (see Regulation O, section 215.4(e)); or

(7) a discount of promissory notes, bills of exchange, conditional sales contracts, or similar paper, without recourse.

Non-interest-bearing deposits to the credit of a bank are not considered loans, advances, or extensions of credit to the bank of deposit. Also, the giving of immediate credit to a bank upon collected items received in the ordinary course of business is not considered to be a loan, advance, or extension of credit to the depositing bank.

An extension of credit by a member bank (for the purposes of section 215.4 of Regulation O) is considered to have been made at the time the bank enters into a binding commitment to make the extension of credit. A participation without recourse is considered to be an extension of credit by the participating bank, not by the originating bank.

Tangible-economic-benefit rule. In general, an extension of credit is considered made to an insider to the extent that the proceeds are transferred to the insider or are used for the tangible economic benefit of the insider. An extension of credit is not considered made to an insider if—

(1) the credit is extended on terms that would satisfy the standard set forth in section 215.4(a) of Regulation O for extensions of credit to insiders and

(2) the proceeds of the extension of credit are used in a bona fide transaction to acquire property, goods, or services from the insider.

2050.0.3.2.2 Insider Use of a Bank-Owned Credit Card

Board staff issued a May 22, 2006, legal opinion in response to an FDIC request for clarification on the application of the Board's Regulation O (12 CFR 215) to credit cards that are issued to bank insiders for the bank's business purposes.[7] The FDIC asked whether, and under what circumstances, an insider's use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O.

The FDIC indicated that insiders of a bank often use a bank-owned credit card to purchase goods and services for the bank's business purposes. A bank-owned credit card is a credit card that is issued by a third-party financial institution to a bank to enable the bank (through its employees) to finance the purchase of goods and services for the bank's business. Board staff commented that it was understood that (1) a bank that provides a bank-owned credit card to its employees typically forbids or discourages use of the card by employees for their personal purposes and that an employee who uses the card for personal purposes is obligated to promptly reimburse the bank and (2) a bank is liable to the card-issuing institution for all extensions of credit made under the card (whether for the bank's business purposes or for an employee's personal purposes)[8].

Although section 215.3(a) of Regulation O broadly defines an extension of credit to include ''a making or renewal of a loan, a granting of a line of credit, or an extending of credit in any manner whatsoever,'' the rule also provides several important exceptions to the definition that are relevant to the FDIC's inquiry. Section 215.3(b)(1) of Regulation O excludes from the

7. The provisions of Regulation O apply to a bank holding company of which a member bank is a subsidiary, and any other subsidiary of that bank holding company. (See 2050.0.3.)

8. In the responding letter, Board legal staff notes that it was understood that some banks directly issue credit cards to their employees to enable the employees to finance the purchase of goods and services for the bank's business (bank-issued credit cards). Also, the letter states that the principles set forth with regard to bank-owned credit cards also would apply to bank-issued credit cards.

definition of extension of credit any advance by a bank to an insider for the payment of authorized or other expenses incurred or to be incurred on behalf of the bank. Also, section 215.3(b)(5) of Regulation O excludes from the definition of extension of credit indebtedness of up to $15,000 incurred by an insider with a bank under an ordinary credit card.

Considering the provisions of Regulation O and the purposes of the insider lending restrictions in the Federal Reserve Act, Board legal staff opined that a bank does not make an extension of credit to an insider for purposes of Regulation O at the time of issuance of a bank-owned credit card to the insider (regardless of whether the line of credit associated with the card is greater than $15,000). The opinion states also that a bank does not extend credit to an insider for the purposes of Regulation O when the insider uses the card to purchase goods or services for the bank's business purposes. However, when an insider uses the card to purchase goods or services for the insider's personal purposes, the bank may be making an extension of credit to the insider. The opinion states that an extension of credit would occur for the purposes of Regulation O if—and to the extent that—the amount of outstanding personal charges made to the card, when aggregated with all other indebtedness of the insider that qualifies for the credit card exception in section 215.3(b)(5) of Regulation O, exceeds $15,000.

The FDIC also asked whether incidental personal expenses charged by an insider to a bank-owned credit card are per se violations of the market-terms requirement in section 215.4(a) of Regulation O because non-insiders do not have access to this form of credit from the bank. In response, Board staff stated that section 215.4(a) requires extensions of credit by a bank to its insiders to (1) be on substantially the same terms (including interest rates and collateral) as, and subject to credit underwriting standards that are not less stringent than, those prevailing at the time for comparable transactions with non-insiders and (2) not involve more than the normal risk of repayment or other features unfavorable to the bank.

The opinion states that a bank may be able to satisfy the market-terms requirement, however, if the bank approves an insider for use of a bank-owned credit card only (1) if the insider meets the bank's normal credit underwriting standards and (2) the card does not have preferential terms (or the card does not have preferential terms in connection with uses of the card for personal purposes). Nonetheless, use of a bank-owned credit card by an insider for personal purposes may violate the market- terms requirement of Regulation O if the card carries a lower interest rate or permits a longer repayment period than comparable consumer credit offered by the bank.

The Board staff's legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances.

2050.0.3.3 General Prohibitions and Limitations of Regulation O

(a) *Terms and creditworthiness*. No member bank may extend credit to any insider of the bank or insider of its affiliates unless the extension of credit (1) is made on substantially the same terms (including interest rates and collateral) as, and following credit-underwriting procedures that are not less stringent than, those prevailing at the time for comparable transactions by the bank with other persons that are not covered by Regulation O and who are not employed by the bank and (2) does not involve more than the normal risk of repayment or present other unfavorable features.

Nothing stated above (as to "terms and creditworthiness") should prohibit any extension of credit made in accordance with a benefit or compensation program that—

1. is widely available to employees of the member bank, and in the case of extensions of credit to an insider of its affiliates, is widely available to employees of the affiliates at which that person is an insider and
2. does not give preference to any insider of the member bank over other employees of the member bank and, in the case of extensions of credit to an insider of its affiliates, does not give preference to any insider of its affiliates over other employees of the affiliates of which that person is an insider.

(b) *Prior approval*. A member bank may not extend credit (including granting a line of credit) to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit to that person and to all related interests of that person, exceeds the higher of $25,000 or 5 percent of the member bank's unimpaired capital and unimpaired surplus, but in no event can it exceed $500,000. This provision applies unless (1) the extension of credit or line of credit has been approved in advance by a majority of the

entire board of directors of that bank and (2) the interested party has abstained from participating directly or indirectly in the voting.

The board of directors' approval is not required for an extension of credit that is made pursuant to a line of credit that was approved by the board of directors within 14 months of the date of the extension of credit. Participation in the discussion, or any attempt to influence the voting, by the board of directors regarding an extension of credit constitutes indirect participation in the voting by the board of directors on an extension of credit.

(c) *Individual lending limit*. A member bank may not extend credit to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit by the member bank to that person and to all related interests of that person, exceeds the lending limit described above in section 2050.0.3.2 (paragraph h). This prohibition does not apply to an extension of credit by a member bank to a company of which the member bank is a subsidiary or to any other subsidiary of that company.

(d) *Aggregate lending limit.*

(1) *General limit*. A member bank may not extend credit to any insider of the bank or insider of its affiliates unless the extension of credit is in an amount that, when aggregated with all outstanding extensions of credit to all such insiders, would exceed the bank's unimpaired capital and unimpaired surplus as defined in section 215.2(i) of Regulation O (see section 2050.0.3.2, paragraph h).

(2) A member bank with deposits of less than $100,000,000 may, by an annual resolution of its board of directors, increase the general limit (specified above) to a level that does not exceed two times the bank's unimpaired capital and unimpaired surplus if the board of directors determines that such higher limit is consistent with prudent, safe, and sound banking practices in light of the bank's experience in lending to its insiders and is necessary to attract or retain directors or to prevent the restriction of the availability of credit in small communities.

The board of directors' resolution must set forth the facts and reasoning on which it bases its finding, including the amount of the bank's lending to its insiders as a percentage of the bank's unimpaired capital and unimpaired surplus as of the date of the resolution. In addition, the bank must meet or exceed, on a fully phased-in basis, all applicable capital requirements established by the appropriate federal banking agency. The bank would also have had to receive a satisfactory composite rating in its most recent bank examination report.

If a member bank has adopted a resolution authorizing a higher limit and subsequently fails to meet the above-listed requirements, the member bank cannot extend any additional credit (including a renewal of any existing extension of credit) to any insider of the bank or its affiliates unless the extension or renewal is consistent with the general limit.

(3) *Exceptions to the general limit.* Effective May 3, 1993, the general limit, described in manual section 2050.0.3.3 (paragraph d) and specified in section 215.4(d)(1) of the Board's Regulation O does not apply to—

(i) extensions of credit secured by a perfected security interest in bonds, notes, certificates of indebtedness, or Treasury bills of the United States or in other such obligations fully guaranteed as to principal and interest by the United States;

(ii) extensions of credit to or secured by unconditional takeout commitments or guarantees of any department, agency, bureau, board, commission, or establishment of the United States or any corporation wholly owned directly or indirectly by the United States;

(iii) extensions of credit secured by a perfected security interest in a segregated deposit account in the lending bank; or

(iv) extensions of credit arising from the discount of negotiable installment consumer paper that is acquired from an insider and carries a full or partial recourse endorsement or guarantee by the insider,[9] provided that—

(A) the financial condition of each maker of such consumer paper is reasonably documented in the bank's files or known to its officers;

(B) an officer of the bank designated for that purpose by the board of directors of the bank certifies in writing that the bank is relying primarily upon the responsibility of each maker for the payment of the obligation and not upon any endorsement or guarantee by the insider; and

(C) the maker of the instrument is not an insider.

(e) *Overdrafts.* A member bank may not pay an overdraft of an executive officer or director of the bank[10] on an account at the bank, unless

9. The exceptions to the aggregate lending limit pertaining to extensions of credit secured in the manner described above (i through iii) apply only to the amounts of such extensions of credit that are secured in such manner.

10. This prohibition does not apply to the payment by a

the payment of funds is made in accordance with (1) a written, preauthorized, interest-bearing extension of credit plan that specifies a method of repayment or (2) a written, preauthorized transfer of funds from another account of the account holder at the bank.

The prohibition above does not apply to payment of inadvertent overdrafts on an account in an aggregate amount of $1,000 or less, provided (1) the account is not overdrawn for more than five business days and (2) the member bank charges the executive officer or director the same fee charged any other customer of the bank in similar circumstances.[11]

2050.0.3.4 Additional Restrictions on Loans to Executive Officers of Member Banks

The following restrictions on extensions of credit by a member bank to any of its executive officers are in addition to any restrictions on extensions of credit by a member bank to insiders of itself or its affiliates. The restrictions listed below apply only to the executive officers of the member bank and not to the executive officers of its affiliates.

A member bank may not extend credit to any of its executive officers, and no executive officer of a member bank can borrow from or otherwise become indebted to the bank, except in the amounts, for the purposes, and upon the conditions specified in items 3 and 4 below.

A member bank is authorized to extend credit to any executive officer of the bank—

(1) in any amount to finance the education of the executive officer's children;

(2) in any amount to finance or refinance the purchase, construction, maintenance, or improvement of a residence of the executive officer, provided—

(i) the extension of credit is secured by a first lien on the residence and the residence is owned (or expected to be owned after the extension of credit) by the executive officer; and

(ii) in the case of refinancing, that only the amount used to repay the original extension of credit, together with the closing costs of the refinancing, and any additional amount thereof used for any of the purposes enumerated in item 2 above, are included within this category of credit;

(3) in any amount, if the extension of credit is secured in a manner described in the first three exceptions to the general limit of the aggregate lending limit (see section 2050.0.3.3, paragraph d, subparagraphs i to iii); and

(4) for any other purpose (not specified in items 1 through 3 above), if the aggregate amount of loans to that executive officer does not exceed, at any one time, the higher of 2.5 percent of the bank's unimpaired capital and unimpaired surplus or $25,000, but in no event more than $100,000.

Any extension of credit by a member bank to any of its executive officers must be—

(1) promptly reported to the member bank's board of directors,

(2) in compliance with the general prohibitions of section 215.4 of Regulation O (manual section 2050.0.3.3),

(3) preceded by the submission of a current detailed financial statement of the executive officer, and

(4) made subject to the condition in writing that the extension of credit will, at the option of the member bank, become due and payable at any time that the officer is indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit that may be made available by a member bank to any of its executive officers.

No member bank may extend credit in an aggregate amount greater than the amount permitted for general-purpose loans to an executive officer (section 215.5(c)(4) of Regulation O) to a partnership in which one or more of the bank's executive officers are partners and, either individually or together, hold a majority interest. The total amount of credit extended by a member bank to such partnership is considered to be extended to each executive officer of the member bank who is a member of the partnership.

Prohibition on knowingly receiving unauthorized extensions of credit. Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extensions of credit not authorized by section 22(h) of the Federal Reserve Act and by Regulation O.

member bank of an overdraft of a principal shareholder of the member bank, unless the principal shareholder is also an executive officer or director. This prohibition also does not apply to the payment by a member bank of an overdraft of a related interest of an executive officer, director, or principal shareholder of the member bank.

11. The requirement that the member bank charge the executive officer or director the same fee charged any other customer of the bank in similar circumstances does not prohibit the member bank from charging a fee provided for in a benefit or compensation program that satisfies the requirements detailed in section 2050.0.3.3, item (a).

2050.0.3.5 Grandfathering Provisions

(a) *Under FDICIA.* FDICIA provided that the amendments to Regulation O would not affect extensions of credit entered into on or before the effective date of the regulation. Therefore, extensions of credit, including lines of credit, made on or before May 18, 1992, are not required to comply with either the individual-borrower limit made applicable to directors and their related interests, or with the aggregate limit on all loans to insiders. All extensions of credit, loan renewals, and loan rollovers made after May 18, 1992, must comply with all of the provisions of Regulation O. In other words, banks cannot make new loans or renew outstanding extensions of credit in amounts that, when aggregated with all other outstanding loans to insiders, would exceed either of the new limits.

(b) *Extensions of credit outstanding on March 10, 1979.* Any extension of credit that was outstanding on March 10, 1979, and that would have, if made on or after March 10, 1979, violated the individual lending limit, had to be reduced in amount by March 10, 1980, to be in compliance with the aggregate lending limit of Regulation O. Any renewal or extension of such a credit extension on or after March 10, 1979, must have been made only on terms that would have brought it into compliance with the aggregate lending limit by March 10, 1980. However, any extension of credit made before March 10, 1979, that bears a specific maturity date of March 10, 1980, or later, had to be repaid in accordance with the repayment schedule in existence on or before March 10, 1979.

2050.0.3.6 Reports by Executive Officers

Each executive officer of a member bank who becomes indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit in section 215.5(c) of Regulation O (manual section 2050.0.3.4) must make a written report to the board of directors of the officer's bank within 10 days of the date the indebtedness reaches such a level. The report must state the lender's name, the date and amount of each extension of credit, any security for it, and the purposes for which the proceeds have been or are to be used.

Report on credit secured by BHC stock. In addition to the report required above, each executive officer or director of a member bank the shares of which are not publicly traded must report annually to the bank's board of directors the outstanding amount of any credit that was extended to the executive officer or director that is secured by shares of the member bank. (See also Regulation Y section 225.4(f) for the identical restriction on executive officers and directors of a bank holding company with loans secured by shares of the bank holding company.)

2050.0.3.7 Report on Credit to Executive Officers

Each member bank must include with (but not as part of) each report of condition (and copy thereof) filed pursuant to 12 U.S.C. 1817(a)(3) a report of all extensions of credit made by the member bank to its executive officers since the date of the bank's previous report of condition.

2050.0.3.8 Disclosure of Credit from Member Banks to Executive Officers and Principal Shareholders

(a) *Definitions.* For the purposes of this section, the following definitions apply:

(1) "Principal shareholder of a member bank" means a person (individual or a company), other than an insured bank, or branch or representative office of a foreign bank as defined in 12 U.S.C. 3101(7)[12] that, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has power to vote more than 10 percent of any class of voting securities of the member bank or company. The term includes an individual or company that controls a principal shareholder (for example, a person that controls a bank holding company). Shares of a bank (including a foreign bank), bank holding company, or other company owned or controlled by a member of an individual's immediate family are considered to be held or controlled by the individual for the purposes of determining principal shareholder status.[13]

12. A *foreign bank* means any company organized under the laws of a foreign country, a territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands that engages in the business of banking, or any subsidiary or affiliate, organized under such laws, of any such company. This includes foreign commercial banks, foreign merchant banks, and other foreign institutions that engage in banking activities usual in connection with the business of banking in the countries where such foreign institutions are organized or operating.

13. See footnote 3.

(2) ‘‘Related interest’’ means (i) any company controlled by a person; or (ii) any political or campaign committee the funds or services of which will benefit a person or that is controlled by a person. A related interest does not include a bank or a foreign bank (as defined in 12 U.S.C. 3101(7)).

(b) *Public disclosure.* Upon receipt of a written request from the public, a member bank shall make available the names of each of its executive officers (with the exception of any executive officer of a bank holding company of which the member bank is a subsidiary or of any other subsidiary of that bank holding company unless the executive officer is also an executive officer of the member bank) and each of its principal shareholders to whom, or to whose related interests, the member bank had outstanding at the end of the latest previous quarter of the year, an extension of credit that, when aggregated with all other outstanding extensions of credit at that time from the member bank to such person and to all related interests of such person, equaled or exceeded 5 percent of the member bank’s capital and unimpaired surplus or $500,000, whichever amount is less. No disclosure under this paragraph is required if the aggregate amount of all extensions of credit outstanding at that time from the member bank to the executive officer or principal shareholder of the member bank and to all related interests of such a person does not exceed $25,000.

A member bank is not required to disclose the specific amounts of individual extensions of credit.

(c) *Maintaining records.* Each member bank is required to maintain records of all requests for the information described above and the disposition of the requests. These records may be disposed of two years after the date of the request.

2050.0.3.9 Civil Penalties of Regulation O

Any member bank, or any officer, director, employee, agent, or other person participating in the conduct of the affairs of the bank, that violates any provision of Regulation O is subject to a civil penalty, as specified in section 29 of the Federal Reserve Act.

2050.0.3.10 Records of Member Banks (and BHCs)

To help inspection and examination personnel identify BHC officials, Regulation O requires each member bank to maintain records necessary to monitor compliance with this regulation. BHCs and nonbank subsidiaries should be given access to the records identifying ‘‘bank officials.’’ Each state member bank is required to (1) identify, through an annual survey, all insiders of the bank itself; and (2) maintain records of all extensions of credit to insiders of the bank itself, including the amount and terms of each such extension of credit.

2050.0.3.10.1 Recordkeeping for Insiders of the Member Bank’s Affiliates

A member bank is required to maintain records of extensions of credit to insiders of the member bank’s affiliates by—

(1) a ‘‘survey’’ method, which identifies, through an annual survey, each of the insiders of the member bank’s affiliates. Under the survey method, the member bank must maintain records of the amount and terms of each extension of credit by the member bank to such insiders or

(2) a ‘‘borrower inquiry’’ method, which requires, as part of each extension of credit, the borrower to indicate whether the borrower is an insider of an affiliate of the member bank. Under this method, the member bank must maintain records that identify the amount and terms of each extension of credit by the member bank to borrowers so identifying themselves.

Alternative recordkeeping method for insiders of affiliates. A member bank may use a recordkeeping method other than those identified above if the appropriate federal banking agency determines that the bank’s method is at least as effective.

2050.0.3.10.2 Special Rule for Noncommercial Lenders

A member bank that is prohibited by law or by an express resolution of the bank’s board of directors from making an extension of credit to any company, or other entity that is covered by Regulation O as a company, is not required to maintain any records of the related interests of the insiders of the bank or its affiliates. The bank is also not required to inquire of borrowers

whether they are related interests of the insiders of the bank or its affiliates.

2050.0.3.11 Section 23A Ramifications

Loans to a holding company parent and its affiliates are governed by section 23A of the Federal Reserve Act and are not subject to Regulation O.

2050.0.4 REMEDIAL ACTION

Self-serving and abusive transactions deprive a BHC of opportunities and benefits that may otherwise have been available and may strip a BHC of its ability to serve as a source of financial and managerial strength to its subsidiary banks. Even if not extended on preferential terms, self-serving loans and other extensions of credit to insiders may be an imprudent business practice and may reduce the lender's liquidity or otherwise overextend the BHC. In such situations, formal or informal remedial measures by the Federal Reserve may be necessary. Formal enforcement action is provided for in the 1974 amendments to the Financial Institutions Supervisory Act of 1966 (12 U.S.C. 1818), which grant the Board authority to issue cease-and-desist orders in appropriate situations. For complete details on formal corrective actions, see section 2110.0.

2050.0.5 INSPECTION OBJECTIVES

1. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries are based on preferential treatment.
2. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries result in any undue loss exposure to the BHC or its subsidiaries.
3. To determine if any BHC or nonbank extension of credit to a BHC official or related interest is in the spirit of Regulation O's requirements or whether it is an attempt to circumvent Regulation O's prohibition on various bank extensions of credit to similar parties.
4. To determine that BHC officials are aware of Regulation O's limitations and prohibitions and have established internal policies and procedures for the bank subsidiaries to ensure compliance by the banks.
5. To determine that the BHC has arranged to make available, upon request, a listing or some other form of information sufficient to identify all "BHC officials" and to make certain that such information is available to the bank subsidiaries in particular.

2050.0.6 INSPECTION PROCEDURES

1. Review the balance sheets and other records of the parent-only and nonbank subsidiaries to determine if there are any loans or other extensions of credit to BHC officials.
2. Review the income statements and supporting records of the parent-only and nonbank subsidiaries to determine if any interest income, other income, or expense is associated with a transaction with a BHC official or a related interest.
3. Ask management to identify all such transactions and to provide supporting documentation.
4. Review management's familiarity with Regulation O's limitations and the steps they have taken to establish policies for the internal administration of their subsidiary banks' extensions of credit to BHC officials.
5. Review any information prepared by management that presents a listing of all BHC officials and their related interests.
6. Review any corporate resolutions declaring an individual not to be an "executive officer" for purposes of Regulation O and, if necessary, confirm the individual's nonparticipation in the formulation of corporate policy.
7. As the provision of Regulation O apply to the BHC and its subsidiaries, determine if the BHC provides employees or other insiders with extensions of credit, including BHC-owned or BHC-issued credit cards. Find out if any of the credit cards are used to conduct the BHC's business.
   a. Verify that the BHC has a written policy that forbids or discourages an employee or other insider from using a BHC-owned or BHC-issued credit card for the insider's personal purposes and that the policy obligates the insider to promptly make reimbursement to the BHC.
   b. Determine the BHC's compliance with Regulation O regarding its extensions of credit (including BHC-owned or BHC-issued credit card loans) to insiders.

Verify that the BHC monitors the amount of personal charges outstanding on its BHC-owned or BHC-issued credit cards that are held by insiders so that the outstanding charges, when aggregated with all of an insider's other indebtedness owed to the BHC, do not exceed $15,000.

c. Verify the BHC's compliance with the market-terms requirement of Regulation O. Determine if—
   - the BHC requires employees and other insiders who have extensions of credit, or use BHC-owned or BHC-issued credit cards for personal purposes, to meet the BHC's normal credit underwriting standards and
   - the BHC has verified that the insiders' extensions of credit (or BHC-owned or BHC-issued credit cards) do not have more preferential terms (for example, a lower interest rate or a longer repayment period) than the consumer credit cards offered by the BHC.

Management Information Systems (General) Section 2060.0

Management Information Systems refers to the policies and operating procedures, including systems of internal control, that the board of directors of a bank holding company initiates to monitor and ensure control of its operations and activities, while maintaining and improving the financial strength and objectives of the overall organization. These policies should focus on the overall organizational structure with respect to identifying, monitoring, and managing risks. Subsequent sections of the manual focus on the essential elements of various management information systems. Included are inspection objectives and procedures to be used by Federal Reserve Bank examiners when conducting inspections of bank holding companies.

5052.0 Targeted MIS Inspection

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section was revised further to include another provision of the FDIC's November 28, 2005, amended rule (effective December 28, 2005) for part 363 of its regulations (12 C.F.R. 363). For insured institutions having total assets of more than $3 billion, the audit committee must have independent members with (1) banking or related financial management expertise, (2) access to legal counsel, and (3) not include any large customers of the institution. The audit committee may also be required to satisfy other audit committee membership criteria.

2060.05.01 AN EFFECTIVE SYSTEM OF INTERNAL CONTROLS

Effective internal control[1] is a foundation for the safe and sound operation of a financial institution (institution).[2] The board of directors and senior management of an institution are responsible for ensuring that the system of internal control operates effectively. Their responsibility cannot be delegated to others within the institution or to outside parties. An important element in assessing the effectiveness of the internal control system is an internal audit function. When properly structured and conducted, internal audit provides directors and senior management with vital information about weaknesses in the system of internal control so that management can take prompt, remedial action. The federal banking agencies'[3] (agencies) long-standing inspection policies call for examiners to review an institution's internal audit function and recommend improvements, if needed. In addition, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 U.S.C. 1831p-1), the agencies have adopted Interagency Guidelines Establishing Standards for Safety and Soundness that apply to insured depository institutions.[4] Under these guidelines and policies, each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In addressing various quality and resource issues, many institutions have been engaging independent public accounting firms and other outside professionals (outsourcing vendors) in recent years to perform work that traditionally has been done by internal auditors. These arrangements are often called "internal audit outsourcing," "internal audit assistance," "audit co-sourcing," and "extended audit services" (hereafter, collectively referred to as outsourcing). Typical outsourcing arrangements are more fully illustrated in part II below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the agencies have concerns that the structure, scope, and management of some internal audit outsourcing arrangements do not contribute to the institution's safety and soundness. Furthermore, the agencies want to ensure that these arrangements with outsourcing vendors do not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

1. In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following internal control objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution's board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report *Internal Control—Integrated Framework*. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for purposes of this policy statement, encompass both financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

2. The term "institution" includes depository institutions insured by the Federal Deposit Insurance Corporation (FDIC), U.S. financial holding companies and bank holding companies supervised by the Federal Reserve System, thrift holding companies supervised by the Office of Thrift Supervision (OTS), and the U.S. operations of foreign banking organizations.

3. The Board of Governors of the Federal Reserve System (FRS), Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and Office of Thrift Supervision (OTS).

4. For national banks, appendix A to part 30; for state member banks, appendix D-1 to part 208; for insured state nonmember banks and insured state-licensed branches of foreign banks, appendix A to part 364; for savings associations, appendix A to part 570.

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002.[5] The act addresses weaknesses in corporate governance and the accounting and auditing professions, and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee composed entirely of independent directors. Public banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges' listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality control, and ethics (including independence) standards for auditors of public companies, subject to SEC review. (See SR-02-20.) Accounting firms that conduct audits of public companies (i.e., registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies, as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards.

[Sections 2060.05.02–2060.05.04 are reserved.]

2060.05.05 APPLICATION OF THE SARBANES-OXLEY ACT TO NONPUBLIC BANKING ORGANIZATIONS

In May 2003, the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision announced that they did not expect to take actions to apply the corporate-governance and other requirements of the Sarbanes-Oxley Act generally to nonpublic banking organizations that are not otherwise subject to them.[5a] (See SR-03-08.) The agencies, however, encouraged nonpublic banking organizations to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance and remain appropriate in light of the organization's size, operations, and resources. Furthermore, the agencies stated that a banking organization's policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and the agencies may take appropriate supervisory action if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

2060.05.06 INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve and other federal banking agencies[6] adopted on March 17, 2003, an interagency policy statement addressing the internal audit function and its outsourcing (See SR 03-5). The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 and associated SEC rules. (See also sections 2124.0.2.4, 2060.1, 3230.0.10.2.5, 5010.7, and 5030.0 [page 7] pertaining to internal and external audits.)

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, insured depository institutions with assets of $500 million or more that are subject to the annual audit and reporting requirements of section 36 of the Federal Deposit Insurance Act, and also nonpublic institutions that are not subject to section 36.

5. Pub. L. No. 107-204.

5a. As discussed below, some aspects of the auditor-independence rules established by the Sarbanes-Oxley Act apply to all federally insured depository institutions with $500 million or more in total assets. See part 363 of the FDIC's regulations.

6. The FDIC, OCC, and OTS.

2060.05.1 INTERNAL AUDIT FUNCTION (PART I)

2060.05.1.1 Director and Senior Management Responsibilities for Internal Audit

The board of directors and senior management are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution's policies.[7]

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management's responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution's operations. Therefore, institutions generally should also have their internal controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal audit function addresses the risks and meets the demands posed by the institution's current and planned activities. To accomplish this objective, directors should consider whether their institution's internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors' (IIA) *Standards for the Professional Practice of Internal Auditing*. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution's internal audit function.

2060.05.1.1.1 Internal Audit Placement and Structure Within the Organization

Careful thought should be given to the placement of the audit function in the institution's management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee,[8] using objective criteria it has established, should oversee the internal audit function and evaluate its per-

7. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC's regulations (12 C.F.R. 363), FDIC-insured depository institutions with total assets of $500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain the following: (1) a statement of management's responsibilities for preparing the institution's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management's assessment of the institution's compliance with those laws and regulations; and (2) for an institution with total assets of $1 billion or more at the beginning of the institution's most recent fiscal year, the report should include an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 C.F.R. 363.2(b) and 70 *Fed. Reg. 71,232, November 28, 2005.)*

8. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC's regulations must maintain an independent audit committee (i.e., consisting of directors who are *not* members of management). For institutions with between $500 million and $1 billion in assets, only a majority, rather than all, of the members of the audit committee—who must be outside directors—must be independent of management. For insured institutions having total assets of more than $3 billion, the audit committee must (1) have members with banking or related financial management expertise, (2) have access to outside legal counsel, and (3) not include any large customers of the institution. The audit committee also may be required to satisfy other audit committee membership criteria (see 12 U.S.C. 831m(g)(1)(c) and section 363.5(b)(12 C.F.R. 363.5(b)). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term "audit committee" is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement.

formance.[9] The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters (e.g., resources, budget, appraisals, and compensation). Institutions are encouraged to consider the IIA's *Practice Advisory 2060-2: Relationship with the Audit Committee*, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager.

Many institutions place the manager of internal audit under a dual reporting arrangement: functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan review, market-risk assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better use available resources, and enhance the institution's ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit's functional reporting to and ability to directly communicate with the institution's audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA's *Practice Advisory 1110-2: Chief Audit Executive Reporting Lines* provides additional guidance regarding functional and administrative reporting lines.

2060.05.1.1.2 Internal Audit Management, Staffing, and Audit Quality

In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

1. A control risk assessment (or risk-assessment methodology) documents the internal auditor's understanding of the institution's significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.
2. An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.
3. An internal audit program describes the objectives of the audit work and lists the

9. For example, the performance criteria could include the timeliness of each completed audit, comparison of overall performance to plan, and other measures.

procedures that will be performed during each internal audit review.

4. An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function's only role should be to independently and objectively evaluate and report on the effectiveness of an institution's risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganizations. This role typically includes helping design controls and participating in the implementation of changes to the institution's control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function's consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution's system of internal control. In order to maintain its independence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA's standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

2060.05.1.1.3 Internal Audit Frequency and Scope

The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution's on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit's control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit's adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution's environment, structure, activities, risk exposures, or systems.[10]

2060.05.1.1.4 Communication of Internal Audit Findings to the Directors, Audit Committee, and Management

To properly carry out their responsibility for internal control, directors and senior management should foster forthright communications and critical inspection of issues to better understand the importance and severity of internal control weaknesses identified by the internal auditor and operating management's solutions

10. Major changes in an institution's environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or disposals thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

to these weaknesses. Internal auditors should report internal control deficiencies to the appropriate level of management as soon as they are identified. Significant matters should be promptly reported directly to the board of directors (or its audit committee) and senior management. In periodic meetings with management and the manager of internal audit, the audit committee should assess whether management is expeditiously resolving internal control weaknesses and other exceptions. Moreover, the audit committee should give the manager of internal audit the opportunity to discuss his or her findings without management being present.

Furthermore, each audit committee should establish and maintain procedures for employees of their institution to submit confidentially and anonymously concerns to the committee about questionable accounting, internal accounting control, or auditing matters.[11] In addition, the audit committee should set up procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.

2060.05.1.1.5 Contingency Planning

As with any other function, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas. Lack of contingency planning for continuing internal audit coverage may increase the institution's level of operational risk.

2060.05.1.2 U.S. Operations of Foreign Banking Organizations

The internal audit function of a foreign banking organization (FBO) should cover its U.S. operations in its risk assessments, audit plans, and audit programs. Its U.S.-domiciled audit function, head-office internal audit staff, or some combination thereof normally performs the internal audit of the U.S. operations. Internal audit findings (including internal control deficiencies) should be reported to the senior management of the U.S. operations of the FBO and the audit department of the head office. Significant adverse findings also should be reported to the head office's senior management and the board of directors or its audit committee.

2060.05.1.3 Internal Audit Systems and the Audit Function for Small Financial Institutions

An effective system of internal control and an independent internal audit function form the foundation for safe and sound operations, regardless of an institution's size. Each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities. The procedures assigned to this function should include adequate testing and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system after taking into account the internal audit function's costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the person(s) directing and/or performing the review of internal controls is not also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

2060.05.2 INTERNAL AUDIT OUTSOURCING ARRANGEMENTS (PART II)

2060.05.2.1 Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourc-

11. Where the board of directors fulfills the audit committee responsibilities, the procedures should provide for the submission of employee concerns to an outside director.

ing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution's manager of internal audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as "internal audit assistance" or "audit co-sourcing."

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

2060.05.2.2 Additional Inspection and Examination Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution's board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should carefully consider its current and anticipated business risks in setting each party's internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter.[12] Contracts between the institution and the vendor typically include provisions that—

1. define the expectations and responsibilities under the contract for both parties;
2. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
3. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
4. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
5. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
6. specify the locations of internal audit reports and the related workpapers;
7. specify the period of time (for example, seven years) that vendors must maintain the workpapers;[13]
8. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;

12. The engagement letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits (see AICPA Professional Standards, AU section 310). These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.

13. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

9. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
10. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

2060.05.2.2.1 Management of the Outsourced Internal Audit Function

Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor's performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

2060.05.2.2.2 Communication of Outsourced Internal Audit Findings to Directors and Senior Management

Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution's manager of internal audit. Decisions not to report the outsourcing vendor's findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board's attention, the concept of "materiality," as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution's compliance with laws and regulations, any exception may be important.

2060.05.2.2.3 Competence of Outsourced Internal Audit Vendor

Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff's qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution's internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

2060.05.2.2.4 Contingency Planning to Avoid Discontinuity of Internal Audit Coverage

When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

2060.05.3 INDEPENDENCE OF THE INDEPENDENT PUBLIC ACCOUNTANT (PART III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution's financial statements, the accounting firm will consider the extent to which it may rely on the

internal control system, including the internal audit function, in designing audit procedures.

2060.05.3.1 Applicability of the SEC's Auditor Independence Requirements

2060.05.3.1.1 Institutions That Are Public Companies

To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC under section 15(d) of that act.[14] The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company.[15] In addition, if a public company's external auditor will be providing auditing services and permissible nonaudit services, such as tax services, the company's audit committee must preapprove each of these services.

According to the SEC's final rules (effective May 6, 2003) implementing the act's nonaudit service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other prohibited nonaudit services to the public company audit client. The SEC's final rules generally become effective May 6, 2003, although a one-year transition period is provided if the accountant is performing prohibited nonaudit services and actual audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period, however, must not have impaired the auditor's independence under the preexisting independence requirements of the SEC, the Independence Standards Board, and the AICPA. Although the SEC's pre-Sarbanes-Oxley independence requirements (issued November 2000 (effective August 2002)) did not prohibit the outsourcing of internal audit services to a public company's independent public accountant, they did place conditions and limitations on internal audit outsourcing.

14. 15 U.S.C. 78*l* and 78o(d).

15. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 U.S.C. 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor's independence. Based on these three broad principles, the other nonaudit services . . . referred to in this section . . . that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client's accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management functions or human resources; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.

2060.05.3.1.2 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

Under section 36, as implemented by part 363 of the FDIC's regulations, each FDIC-insured depository institution with total assets of $500 million or more is required to have an annual audit performed by an independent public accountant.[16] The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that "[t]he independent public accountant should also be in compliance with the AICPA's *Code of Professional Conduct* and meet the independence requirements and interpretations of the SEC and its staff."[17]

Thus, the guidelines provide for each FDIC-insured depository institution with $500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC's auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC's January 2003 auditor independence rules, once the rules come into effect.[18]

16. 12 C.F.R. 363.3(a). (See FDIC Financial Institutions Letter, FIL-17-2003 (Corporate Governance, Audits, and Reporting Requirements), Attachment II, March 5, 2003.)

17. Appendix A to part 363, Guidelines and Interpretations, paragraph 14, Independence.

18. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding com-

2060.05.3.1.3 Institutions Not Subject to Section 36 of the FDI Act That Are Neither Public Companies Nor Subsidiaries of Public Companies

The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company[19] to have its financial statements audited by an independent public accountant.[20] The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies. As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution's internal audit activities. These circumstances include, but are not limited to, situations where—

1. splitting the audit activities poses significant costs or burden,
2. persons with the appropriate specialized knowledge and skills are difficult to locate and obtain,
3. the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution, and
4. the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement.[21] In this regard, the audit committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution's board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety-and-soundness reasons, the institution's primary federal regulator may require that the institution and its independent public accountant comply with the auditor independence requirements of the Act.[22]

2060.05.3.1.4 AICPA Guidance

As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA's *Code of Professional Conduct*. This code includes professional ethics standards, rules, and interpretations that are

pany, once the SEC's January 2003 regulations prohibiting an external auditor from performing internal audit outsourcing services for an audit client take effect May 6, 2003, or May 6, 2004, depending on the circumstances, the holding company's external auditor cannot perform internal audit outsourcing work for that holding company or the subsidiary institution.

19. FDIC-insured depository institutions with less than $500 million in total assets are not subject to section 36 of the FDI Act. Section 36 does not apply directly to holding companies, but it provides that, for an insured depository institution that is a subsidiary of a holding company, its audited financial statements requirement and certain of its other requirements may be satisfied by the holding company.

20. See, for example, the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Institutions.

21. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the performance of these services on the auditor's independence.

22. 15 U.S.C. 78j-1.

binding on all certified public accountants (CPAs) who are members of the AICPA in order for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client's management or as a client employee. The AICPA's guidance includes illustrations of activities that would be considered to compromise a CPA's independence. Among these are activities that involve the CPA authorizing, executing, or consummating transactions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA's *Code of Professional Conduct*.

2060.05.4 INSPECTION GUIDANCE (PART IV)

2060.05.4.1 Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their inspection work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution's internal audit function, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Specifically, examiners should consider whether—

1. the internal audit function's control risk assessment, audit plans, and audit programs are appropriate for the institution's activities;
2. the internal audit activities have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
3. the internal audit activities are consistent with the long-range goals and strategic direction of the institution and are responsive to its internal control needs;
4. the audit committee promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
5. the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
6. the institution has promptly responded to significant identified internal control weaknesses;
7. the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and results of audits are promptly communicated to senior management and members of the audit committee and board of directors;
8. workpapers adequately document the internal audit work performed and support the audit reports;
9. management and the board of directors use reasonable standards, such as the IIA's *Standards for the Professional Practice of Internal Auditing*, when assessing the performance of internal audit; and
10. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution's internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

1. the arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
2. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
3. the scope of the outsourced work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
4. the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
5. the arrangement with the outsourcing vendor satisfies the independence standards

described in this policy statement and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant; and
6. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

2060.05.4.2 Inspection Concerns About the Adequacy of the Internal Audit Function

If the examiner concludes that the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet the institution's internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the inspection should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. Should the examiner find material weaknesses in the internal audit function or the internal control system, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution's management and composite ratings should reflect the examiner's conclusions regarding the institution's internal audit function. The report of inspection should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

2060.05.4.3 Concerns About the Independence of the Outsourcing Vendor

An examiner's initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution's and its vendor's adherence to the independence standards described in parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner's concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution's senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution's external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable.

2060.05.5 INSPECTION OBJECTIVES

1. To determine with reasonable assurance whether the institution[23] has an adequate system of internal controls that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
2. To determine if the internal audit function and the internal audit outsourcing arrangements of the parent company and its subsidiaries are adequately and competently managed by the board of directors and senior management.

23. The term "institution" is used to maintain consistency with the interagency policy statement, but these inspection objectives and procedures apply to financial holding companies, bank holding companies, and their bank and nonbank subsidiaries.

3. To ascertain that the banking organization's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the management process: the control environment, risk assessment, control activities, information and communication, and monitoring activities.
4. To determine whether the internal audit function reports vital information about weaknesses in the system of internal control to the board of directors (or its audit committee) and senior management and that expeditious remedial action is taken to resolve the internal control weaknesses as well as any other exceptions.
5. To determine that the audit committee has established and maintains procedures for employees of the institution to confidentially and anonymously submit concerns to the committee about questionable accounting, internal control, or auditing matters, and that the audit committee has procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.
6. To determine the adequacy of the internal audit function (including its use of outsourced internal audit vendors) as to organizational structure, prudent management, staff having sufficient expertise, audit quality, and the ability of auditors to directly and freely communicate internal audit findings to the board of directors, its audit committee, and senior management.
7. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor, under standards established in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

2060.05.6 INSPECTION PROCEDURES

Examiners should obtain assurances from the audit committee and senior management that they will have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. Examiners should consider widening the scope of their inspection work when such assurances are not provided or if there are any significant delays in gaining access to the internal audit resources. Such a delay may subject the institution to follow-up supervisory action.

2060.05.6.1 Internal Audit Function Inspection Procedures

1. Assess the quality and scope of the internal audit work, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Consider whether—
   a. the board of directors (or audit committee) promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
   b. the internal audit function's risk assessment, plans, and programs are appropriate for the institution's activities;
   c. the internal audit function is adequately managed to ensure that audit plans are accomplished, programs are carried out, and results of audits are promptly communicated to the managers and directors;
   d. the institution has promptly responded to identified internal control weaknesses;
   e. management and the board of directors use reasonable standards when assessing the performance of internal audit;
   f. the internal audit plan and program have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
   g. the activities of internal audit are consistent with the long-range goals of the institution and are responsive to its internal control needs; and
   h. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.
2. Assess the competence of the institution's internal audit staff and management by considering the education and professional background of the principal internal auditors.
3. Broaden the scope of the inspection if the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet its internal audit needs, does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise inadequate.
4. Discuss supervisory concerns and outstanding internal-external audit report comments with the internal audit manager or other person responsible for reviewing the system of

internal control. If these discussions do not resolve the examiner's comments and concerns, bring these matters to the attention of senior management and the board of directors or audit committee.

5. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions that should be taken to ensure that the institution corrects the deficiencies (including formal and informal enforcement actions).
6. Incorporate conclusions about the institution's internal audit function into its management and composite supervisory ratings.
7. Include in the inspection report comments concerning the adequacy of the internal audit function, significant issues or concerns, and recommended corrective actions.

2065.05.6.2 Additional Aspects of the Examiner's Review of an Outsourcing Arrangement

1. Review the internal audit outsourcing arrangement and determine if the institution has a written contract or an engagement letter with the vendor.
2. Determine whether the written contract or engagement letter includes provisions that—
   a. define the expectations and responsibilities under the contract for both parties;
   b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
   c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
   d. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and establish stipulations for default and termination of the contract;
   e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
   f. specify the locations of internal audit reports and the related workpapers;
   g. specify the period of time (for example, seven years) that vendors must maintain the workpapers;[24]
   h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
   i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
   j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.
3. Determine whether—
   a. the outsourcing arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
   b. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
   c. the scope of work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
   d. the directors have ensured that the outsourced internal audit function is effectively managed by the institution;
   e. the arrangement with the outsourcing vendor satisfies the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant;

24. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the banking organization and examiners to access the electronic workpapers for a specified time period.

f. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and whether there are adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement; and
g. the institution has a contingency plan to ensure continuity in audit coverage, especially for high-risk areas.

4. Adjust the scope of the inspection if the outsourcing arrangement has diminished the quality of the institution's internal audit. If the quality of the internal audit is diminished, inform senior management and the board of directors and consider it in the institution's management and composite ratings.

2060.05.6.3 Assessment of Auditor Independence

1. If the initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, raises questions about the institution's and its vendor's adherence to the independence standards discussed in parts I, II, and III of the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing, and if the vendor provides both external and internal audit services to the institution—
   a. question the institution and the outsourcing vendor about how the audit committee determined that the vendor was independent; and
   b. if the vendor is an accounting firm, ask the audit committee how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence.
2. If the answers to the above raise supervisory concern, or are not adequately addressed, discuss the matter with appropriate Reserve Bank management and supervisory staff.
3. If the Reserve Bank management and supervisory staff concurs that the independence of the external auditor or other vendor appears to be compromised, discuss the examination findings and what appropriate supervisory actions the Federal Reserve should take, and discuss the actions to be taken with the bank's senior management, board of directors (or audit committee), and the external auditor or other vendor.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2006, this section has been revised to incorporate the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. The advisory informs financial institutions (including bank holding companies) that it is unsafe and unsound to enter into external audit contracts (that is, engagement letters) for the performance of auditing or attestation services when the contracts (1) indemnify the external auditor against all claims made by third parties, (2) hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages), or (3) limit the remedies available to the client financial institution (other than punitive damages). Such limits on external auditors' liability weaken the auditor's independence and performance, thus reducing the supervisory agency's ability to rely on the auditor's work. Bank holding companies subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions are encouraged to seek an amendment to an engagement letter executed prior to February 9, 2006, to be consistent with the advisory. (See SR-06-4.)

2060.1.1 INTERNAL AND EXTERNAL AUDIT PROGRAMS AND ACTIVITIES

Audit is an independent appraisal activity that serves as a managerial control within an organization. The primary responsibility for the maintenance of sound systems of internal controls and an adequate internal audit program rests with the directorate of the bank holding company. Included among the objectives of a comprehensive audit program are the detection of irregularities; the determination of compliance with applicable laws and regulations; and the appraisal of the soundness and adequacy of accounting, operating, and administrative controls designed to ensure prompt and accurate recording of transactions and proper safeguarding of assets. At a minimum, an audit program should ensure that adequate systems of checks and balances are in effect to deter fraud and detect control deficiencies.

The size and complexity of a bank holding company operation are major determinants in the scope and extent of the audit program that is developed. In the smaller, less sophisticated organizations, such as holding company shells for small banks, it may not be feasible to employ an auditor or implement an audit program. In some cases, such as those in which banking assets represent virtually all of the parent company's assets and a comprehensive, effective audit program is being implemented in the various subsidiaries, neither an internal nor an external audit program may be necessary at the parent company level.

The development and implementation of an internal audit program should be delegated to a qualified staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor. When evaluating the effectiveness of an internal audit program, the examiner may want to consider the size of audit staffs of banking organizations of a similar size and complexity. To ensure freedom of access to corporate records and complete independence and objectivity in administering the audit program, the auditor should report directly to the directorate or a committee thereof. Administratively, the internal auditor is usually responsible to an officer at a major policymaking level.

To supplement the internal audit activities, external accountants-auditors may be engaged to certify or audit the financial statements or specified activities of the bank holding company and its subsidiaries. Each top-tier bank holding company with total consolidated assets of $500 million or more must engage independent public accountants to perform audits and report on its annual financial statements in accordance with generally accepted accounting principles. The scope of the audit engagement must be sufficient to permit such accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. Bank holding companies do not have to submit audited financial statements as part of the requirements for the FR Y-6 annual report. The Federal Reserve may request audited consolidated financial statements from any bank holding company with total consolidated assets of less than $500 million if deemed warranted for supervisory purposes.

The internal and external auditors should

work together in establishing the scope and frequency of audits to be performed. In addition to performing some of the basic functions of the internal auditor, the external auditor should review the internal auditing program to assess its scope and adequacy. When a bank holding company is perhaps too small to employ an internal audit staff, but when the complexities and activities of the organization suggest the need for an audit, the holding company should consider hiring an external auditor. Independence and objectivity are mandatory in any audit program, and these are difficult to maintain if the audit function is a part-time responsibility. When external auditors are employed to perform the internal audit function, they should be permitted to establish the scope of their audits and schedule surprise audits. They also should be given responsibility for suggesting systems and organizational duty assignments for maximum control consistent with the size of the organization.

2060.1.2 EXTERNAL AUDITORS AND THE RELEASE OF REQUIRED INFORMATION

The enactment of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) on August 9, 1989, requires that FDIC-insured depository institutions that are being audited provide their independent auditors with information concerning their financial condition and any supervisory actions being taken against them. Specifically, section 36(h)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831m(h)(1)) (the FDI Act) requires an insured depository institution that has engaged the services of an independent auditor to perform an audit within the past two years to provide the auditor with—

1. a copy of the most recent report of condition made by the institution (pursuant to the FDI Act or any other provision of law) and a copy of the most recent report of examination received by the institution;
2. a copy of any supervisory memorandum of understanding with such institution and any written agreement between a federal or state banking agency and the depository institution that is in effect during the period covered by the audit; and
3. a report of any action initiated or taken by a federal banking agency during the period covered by the audit under subsection (a), (b), (c), (e), (g), (i), (s), or (t) of section 8 of the FDI Act or of any similar action taken by a state banking agency under state law, or any other civil money penalty assessed under any other provision of law with respect to the depository institution or any affiliated party.

External auditors who are serving as agents of a bank holding company may, with the approval of the organization, review examination or inspection reports and supervisory correspondence received and communicate with examiners. Examiners should remind external auditors of their responsibility to maintain the confidentiality of the reports and other supervisory communications reviewed as part of their engagement. See also the Board's rules on the release of confidential supervisory information (12 C.F.R. 261, subpart C).

2060.1.3 EXTERNAL AUDITOR INQUIRIES

In some situations, examiners may not be able to fully respond to external auditors' inquiries on certain matters relating to examinations still in progress. The examiners' findings may be incomplete or may be under review by higher supervisory authorities within the Federal Reserve System. In addition, as a general practice, examiners will normally only discuss with external auditors issues and inspection findings that have been presented to the bank holding company's management. These situations relate primarily to the timing of the auditors' inquiries in relation to the stage of inspection work and, thus, should not automatically preclude an auditor from expressing an opinion on the organization's financial statements.

2060.1.4 UNSAFE AND UNSOUND USE OF LIMITATION-OF-LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)[1] issued an interagency advisory (the advisory) to address safety-and-

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as *engagement letters*) that limit the auditors' liability for audit services.[2] The advisory informs financial institutions'[3] boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors' liability.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Limits on external auditors' liability may weaken the external auditors' objectivity, impartiality, and performance and, thus, reduce the agencies' ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory and its appendix A; see section 2060.1.4.7) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the U.S. Securities and Exchange Commission (SEC), the Public Company Accounting Oversight Board (PCAOB), and the American Institute of Certified Public Accountants (AICPA).

2060.1.4.1 Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management's assessment of internal control over financial reporting (collectively, *audit* or *audits*).

The advisory does not apply to—

1. nonaudit services that may be performed by financial institutions' external auditors,
2. audits of financial institutions' 401(k) plans, pension plans, and other similar audits,
3. services performed by accountants who are not engaged to perform financial institutions' audits (e.g., outsourced internal audits or loan reviews), and
4. other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor's liability with respect to audits in an unsafe and unsound manner.

2060.1.4.2 External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution's financial statements. The external auditor's objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution's internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC's September 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations[4] notes, "[a]n institution's internal and external audit programs are critical to its safety and soundness." The policy also states that an effective external auditing program "can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC."

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution's audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the

2. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

3. As used in this advisory, the term *financial institutions* includes bank holding companies, banks, savings associations, and savings and loan holding companies.

4. See 64 Fed. Reg. 52,319 (September 28, 1999).

external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As with all agreements that affect a financial institution's legal rights, the financial institution's legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples.[5] Financial institutions' boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors' and officers' liability policies) might not cover losses arising from claims.

2060.1.4.3 Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

1. indemnifies the external auditor against claims made by third parties;
2. holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
3. limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as *limitation-of-liability provisions.*

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agreements by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with $500 million or more in total assets are required to have annual independent audits.[6] Furthermore, financial institutions that are public companies[7] must have annual independent audits. Certain savings associations (for example, those with a CAMELS rating of 3, 4, or 5) and savings and loan holding companies are also required by OTS's regulations to have annual independent audits.[8] The agencies rely on the results of audits as part of their assessment of a financial institution's safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors' liability, the external auditors' objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors' objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors' adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing

5. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor's liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory's appendix A. See section 2060.1.4.7.

6. For banks and savings associations, see section 36 of the FDI Act (12 U.S.C. 1831m) and part 363 of the FDIC's regulations (12 C.F.R. 363).

7. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.

8. See OTS regulation at 12 C.F.R. 563.4.

the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

2060.1.4.4 Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC's rules, pursuant to part 363 (or section 562.4 of the OTS's regulations) require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution's external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC's regulations (or in section 562.4 of the OTS regulations), the external auditor should be in compliance with the AICPA's Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.[9] In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC's auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The SEC's FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor's independence. The FAQ is consistent with the SEC's Codification of Financial Reporting Policies, section 602.02.f.i, "Indemnification by Client." (See section 2060.1.4.8.)

On the basis of the SEC guidance and the agencies' existing regulations, certain limits on auditors' liability are already inappropriate in audit engagement letters entered into by—

1. public financial institutions that file reports with the SEC or with the agencies,
2. financial institutions subject to part 363,[10] and
3. certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors' liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

2060.1.4.5 Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

9. See part 363 of the FDIC's regulation (12 C.F.R. 363), *Appendix A—Guidelines and Interpretations, Guideline 14, "Role of the Independent Public Accountant-Independence."*

10. See also the OTS's regulation (12 C.F.R. 562.4).

1. apply equally to all parties,
2. provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
3. are not imposed in a coercive manner.

2060.1.4.6 The Advisory's Conclusion

Financial institutions' boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution's external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

2060.1.4.7 Examples of Unsafe and Unsound Limitation-of-Liability Provisions

The following information was contained in appendix A of the February 9, 2006, interagency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions' external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar effects is considered an unsafe and unsound practice.

1. "Release from Liability for Auditor Negligence" Provision

In this type of provision, the financial institution agrees not to hold the audit firm liable for *any* damages, *except* to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the financial institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm's] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. "No Damages" Provision

In this type of provision, the financial institution agrees that in no event will the external audit firm's liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm's] liability under the terms of this agreement include responsibility for any claimed incidental or consequential damages.

3. "Limitation of Period to File Claim" Provision

In this type of provision, the financial institution agrees that *no* claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution's rights in filing a claim.

Example: It is agreed by the financial institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the financial institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. *“Losses Occurring During Periods Audited” Provision*

In this type of provision, the financial institution agrees that the external audit firm’s liability will be limited to any losses occurring during periods covered by the external audit, and will not include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm’s liability to a period before there could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client’s financial statements in those years.

Example: In the event the financial institution is dissatisfied with [the audit firm’s] services, it is understood that [the audit firm’s] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm’s] audit, and shall not include any losses occurring in later periods for which is not engaged as auditors.

5. *“No Assignment or Transfer” Provision*

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution’s insurer under its directors’ and officers’ liability or other insurance coverage.

Example: The financial institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. *“Knowing Misrepresentations by Management” Provision*

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the financial institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

7. *“Indemnification for Management Negligence” Provision*

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm’s failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The financial institution shall indemnify, hold harmless, and defend and its authorized agents, partners, and employees from and against any and all claims, damages, demands, actions, costs, and charges arising out of, or by reason of, the financial institution’s negligent acts or failure to act hereunder.

8. *“Damages Not to Exceed Fees Paid” Provision*

In this type of provision, the financial institution agrees to limit the external auditor’s liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a

substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the financial institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.[11]

2060.1.4.8 Frequently Asked Questions on the Application of the SEC's Auditor-Independence Rules

The following information is contained in appendix B of the February 9, 2006, interagency advisory. The information is derived from the SEC's Office of Chief Accountant's Codification of Financial Reporting Policies.

Question[12]

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement "from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at 'common law,' other than for their willful misstatements or omissions."

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agreement of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, one of the major stimuli to objective and unbiased consideration of the problems encountered in a particular engagement is removed or greatly weakened. Such condition must frequently induce a departure from the standards of objectivity and impartiality which the concept of independence implies. In such difficult matters, for example, as the determination of the scope of audit necessary, existence of such an agreement may easily lead to the use of less extensive or thorough procedures than would otherwise be followed. In other cases it may result in a failure to appraise with professional acumen the information disclosed by the examination. *Consequently, the accountant cannot be recognized as independent for the purpose of certifying the financial statements of the corporation.*

Question

Has there been any change in the commission's long-standing view (Financial Reporting Policies—Section 600—602.02.f.i., "Indemnification by Client") that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, *the accountant is not independent.* Further, including in engagement letters a clause that a registrant would release, indemnify, or hold harmless from any liability and costs resulting from *knowing misrepresentations by management would also impair the firm's independence.*

2060.1.3 INSPECTION OBJECTIVES

1. To review the operations of the bank holding company to determine if an audit program exits.
2. To determine the independence and competence of those who administer and provide the internal and external audit function.

11. The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.
12. The subtitles in this section have been revised for this manual.

3. To determine the adequacy of the scope and frequency of the audit program.
4. To determine with reasonable assurance that the bank holding company has adequate internal audit and external audit functions that ensure efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
5. To ascertain if the bank holding company's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank holding company's management process—the control environment, risk assessment, control activities, information and communication, and monitoring activities.
6. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor under the standards established by the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.
7. To consider the policies, processes, and personnel surrounding the bank holding company's external auditing program and to determine the existence of any unsafe and unsound practices or conditions, including whether—
   a. any engagement letter or other agreement related to external audit activities (1) provides any assurances of indemnification to the bank's external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or (2) raises any other safety-and-soundness concerns; and
   b. the external auditors have not maintained appropriate independence in their relationships with the bank holding company, in accordance with relevant professional standards.
8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

2060.1.6 INSPECTION PROCEDURES

The primary thrust of the inspection should be directed toward the audit activities that relate to the parent company and all subsidiaries. An assessment of the audit function as it pertains to the bank (or banks) is primarily the responsibility of the regulatory agency that examines that particular bank. The examiner should review the latest bank examination reports to note comments and deficiencies cited concerning internal controls and the audit function. In addition to providing an input into the overall assessment of the audit function, review of the bank examination reports may provide a basis for determining areas of investigation during the inspection. Further, if matters cited in the latest bank examination report are deemed to be significant and indications are that corrective action has not been taken, the examiner should mention the facts to senior management of the bank holding company and note the details in the inspection report.

To judge the adequacy of the audit program, including its scope and frequency, the following procedures, with equal emphasis being placed on the parent, bank, and nonbank subsidiaries, are recommended as minimum guidelines for the inspection.

1. Review the parent company and nonbank operations and the audit comments in the bank examination reports to ascertain the adequacy of the existing audit program or the need for developing such a program, if the organization currently lacks one.
2. Review the scope of the audit function to ensure that procedures are in place to cover adequately those areas that may be susceptible to exposure. When reviewing the audit scope, determine whether the auditor was able to perform all the procedures necessary to complete the audit. If not—
   a. establish whether the scope limitations were imposed by the directorship or management and
   b. determine whether the auditor established and documented the reasons why the scope limitations were imposed.
      (1) Was the auditor able to quantify the effects of the scope limitation on the financial statements and the audit results, and, if not pervasive, was a qualified opinion or disclaimer of opinion issued?
      (2) Did the auditor evaluate all possible effects on his ability to express an opinion on the financial statements?
      (3) Were there any external circumstances that imposed limitations on the audit's scope?
      (4) Were alternative procedures used to accomplish the same audit objectives? If so, did the use of the alternative procedures justify issuance of an unqualified opinion?

3. Review the audit schedule to determine that the audits are satisfactorily spaced and that all functions are audited with adequate frequency.
4. Review audit workpapers and reports on a test-check basis for adequacy of content, satisfactory maintenance, and conformance to audit guidelines outlined by the board of directors.
5. Determine the qualifications and background of the auditor and others participating in the audit function.
6. To establish that the auditor has a direct communication line to the board of directors and freedom of access to all records for audit purposes, review audit reports and minutes of meetings held by directors or a committee thereof.
7. Determine the entity responsible for maintaining the audit function. If a bank provides audit services to affiliates, indicate the manner in which the bank is reimbursed for the cost of such services.
8. Determine whether audit reports are submitted on a timely basis to—
   a. the directors and senior management and
   b. management in the area being audited.
9. Review responses to exceptions and recommendations noted in audit reports.
10. Check on the relationship between the internal and any external auditors to determine whether their activities are coordinated in a manner that effects comprehensive coverage of the organization and at the same time avoids duplication of effort.
11. Review the letter addressed to management by the external auditor and determine that steps have been taken to correct any deficiencies noted. If no deficiencies were noted in the letter, inquire as to whether such comments were communicated to management by any other means.
12. Ascertain that the audit program is annually reviewed and approved by the directors.
13. If the BHC has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management's assessment of internal control, appraisals of the BHC's audit function, or any internal audit or audit function or operational review, the examiner should:
    a. Review the engagement letters (including past or pending engagement letters) and any agreements between the board of directors (and the audit committee) and the external auditor, noting any qualifications that are contained therein.
    b. Review any correspondence exchanged between the BHC and the external auditor, including any letters requesting opinions from external auditors. Determine if BHC management influenced any of the opinions.
    c. Ascertain if any of the engagement letters restricted the scope of the audit in any way, including whether the letters limited the degree of reliance to be placed on the work of the internal audit staff.
14. Determine if the audit engagement letters or other agreements include possible unsafe and unsound provisions or practices that—
    a. indemnify the external auditor against all claims made by third parties;
    b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the BHC may assert, thus providing relief from liability for the auditors' own negligent acts, including any losses, claims, damages, or other liabilities, (other than claims for punitive damages); or
    c. limit the remedies available to the BHC (other than punitive damages).
15. Find out whether the BHC's board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign, thus indicating the BHC's approval and financial commitment.
16. Verify that the BHC has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the BHC's legal rights.
17. If new external auditors have been engaged, ascertain the reasons for such change.
18. Determine if the parent company or nonbank subsidiaries have reported any defalcations. If so, determine if adequate controls have been initiated to lessen any further risk and exposure.
19. Determine if the BHC's external auditors received copies of the subsidiary FDIC-insured institution's examination and other designated supervisory reports and correspondence required by section 36(h)(1) of the FDI Act.
20. Determine the degree of independence of

the external audit firm by reviewing any financial ties between the BHC, audit firm, and any of its partners or employees. Also review any other relationships or potential conflicts of interest that may exist.[13]

The independence of the internal auditor should be evaluated by ascertaining whether the following conditions exist: (1) reports are distributed directly to the board or a committee thereof or, less desirably, to an officer not connected with the area being reviewed; (2) there are no relationships within the organization that are incompatible with the internal audit function; and (3) severe restrictions are not placed on the program or its scheduling by management. In order to maintain the degree of objectivity essential to the audit function, the examiner should establish that the internal auditor does not install procedures, originate and approve entries, or otherwise engage in any activity that would be subject to audit review and appraisal.

The examiner should consider meeting with the audit committee and the auditor and, subsequently, with senior bank holding company management to communicate conclusions concerning the adequacy of the scope and frequency of the audit program. During the discussions, the examiner should concentrate on detailing criticisms or deficiencies noted. The auditor and senior bank holding com-pany management should be made fully cognizant of the examiner's analyses and the comments concerning the audit function that will appear on the relevant pages in the inspection report.

13. The Securities and Exchange Commission (SEC) has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if there are financial, employment, or business relationships between auditors and audit clients, or if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC's independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing. (See section 2060.05.)

An assessment of management's strategic plans and its success in meeting previously established budgetary goals is one of the factors considered in evaluating a BHC's management, operations, financial condition, and prospects.[1] Through review of the budget figures, insight can be gained concerning an organization's future plans and other matters such as capital adequacy, liquidity, sources and applications of funds, level and quality of earnings, and performance of management.

The budget is a coordinated financial plan used to estimate and control all or a few of the activities of the various divisions or subsidiaries in a bank holding company. Based on an assessment of future economic developments and conditions, management formulates a plan of action and indicates anticipated changes in the balance-sheet accounts and profitability (predicated on implementation of the plan). The budget is a significant management tool in that it projects expected results and also serves as an important check on management decisions and performance by providing a basis for comparison and corrective action on a timely basis. The comparison of actual performance to budget allows management to give careful attention to various possible courses of action and to choose the course which should result in the greatest benefit. Budgeting is also useful in measuring the performance of individuals and the departments they manage. Further, the comparison of budget totals to actual changes in activities such as loans, investments, and deposits assists in decision making and can promote coordination and cooperation among affiliates. The variance indicated by the comparison process may be construed as a measure of management's performance and planning record and its relationship to the organization's goals and objectives. It should be noted that some significant variances may be caused by factors beyond management's control or factors that could not reasonably be anticipated.

1. The *stragetic planning process* focuses on intermediate and long-term strategic goals and is the vehicle used to determine the overall direction and focus of the organization. The *budgeting process* refers to the tactical decisions required to meet goals and objectives. The budget is a subset of the strategic plan. While smaller bank holding company organizations may not always have formal written budgets, all organizations should have a strategic planning process, which determines overall corporate direction, general resource allocation, and balance-sheet relationships with respect to capital needs, growth, asset mix, and risk.

While various individuals may be responsible for input to the budget process, the chief executive officer typically has the ultimate responsibility for preparation and implementation of the formal budget. The time period covered by a budget typically encompasses one year, although it often covers longer periods in the larger, more sophisticated bank holding companies. The longer the budget period, the greater are the prospects for increased variances from original budget figures. In some cases in which four- or five-year projections are made, bank holding companies may formulate several forecasts based on different sets of assumptions. In such instances, the examiner should work with the "most likely" situation that may evolve based on economic trends, history, and experience of the organization, but should also give serious consideration to the "worst-case" projections.

Many bank holding companies, particularly the smaller organizations, may not have formal written budgets or plans. In small shell companies, while it is not essential to have a formal budget, budgeting procedures should be encouraged where appropriate. Budgeting at the parent level could be appropriately limited to debt-servicing and dividend considerations.

2060.2.1 INSPECTION OBJECTIVES

1. To determine the extent of an organization's financial planning and budget program.
2. To indicate to management of organizations that are without formal planning procedures the advantages of adopting a budget.
3. To understand the institution's decision-making process as it relates to the budget.
4. To determine the causes of significant variances between the budget and actual performance.
5. To assess the reasonableness of projected figures, including controls over the data throughout the budgeting process.
6. To assess the impact of the budget on the present condition and future prospects of the bank holding company.
7. To determine whether the plan outlined in the budget is supported by the financial and managerial resources of the holding company.

2060.2.2 INSPECTION PROCEDURES

1. Familiarity with a bank holding company's financial condition and results of operations should begin before the start of the inspection with a review of the annual report to shareholders, financial reports submitted to the Federal Reserve System, and other financial documentation contained in the files. The more significant accounts, statistical data, and pertinent ratios should be compared on a period-to-period basis to highlight significant changes and discern trends.

2. The examiner also should become familiar with current and projected economic conditions, both nationally and locally, including general industry conditions.

3. Based on a review of the aforementioned data, the examiner should be in a position to substantiate the reasonableness of budgeted figures without a systematic examination of all of the transactions affecting the figures presented. Further, such an analysis provides a better understanding of the operation and highlights matters of interest and potential problem areas to be investigated during the inspection.

4. Throughout the review process, the examiner must maintain a sense of perspective to avoid spending excessive time on relatively immaterial amounts.

5. The examiner should meet with the officer responsible for the preparation of the budget to determine the scope of the organization's financial plans. The extent of senior management's and the board of directors' involvement in the strategic planning and budgeting process should also be ascertained in this preliminary meeting.

6. Workpapers which document or illustrate the rationale for the budget data should be reviewed and discussed with budget personnel, including the existence and extent of internal controls over the data.

7. The examiner should evaluate plans, projections, and forecasts in light of market-area characteristics and the present condition and history of the organization.

8. The examiner should determine whether the accounting principles of major importance have been applied consistently and, if not, the impact of the alternative accounting treatment on the budget totals.

9. The sources of input for the budget should be reviewed and the frequency and procedures for effecting revision should be ascertained.

10. When there are significant budget variances, the examiner should seek documented explanations. Review any such documentation to determine if management policy or factors beyond management control were responsible for the variances.

11. A final summary discussion should be held with management to discuss goals which the examiner believes may be unattainable and to communicate conclusions concerning the budget. Due consideration should be given to management's views, whether or not in concurrence with the examiner's conclusions. If management indicates future changes which could have a significant impact on the organization, the matter should be noted in the inspection report. Further, management's assessment of the effect of contemplated action on the operations and financial condition of the bank holding company should be noted.

12. For those bank holding companies that do not have formal written plans, the examiner should obtain from senior management information on their plans for matters such as growth and expansion, capital injections, debt retirement, and changes in sources of funding. Except for small, shell companies, the examiner should recommend adoption of a budget program and emphasize the need for strategic planning by indicating how management methods may be improved as a result of a logically conceived and properly operated budget. Budgets and planning are especially important in cases in which a bank holding company is losing its share of the market or in which inefficiencies are depressing profitability.

Adequate and accurate records and financial statements are an integral part of a sound bank holding company operation. Records should be maintained to allow preparation of financial statements in accordance with generally accepted accounting principles and to ensure proper accountability for all assets, liabilities, income, and expenses. Generally, an independently certified statement inspires greater confidence than a statement prepared internally. Moreover, an unqualified, independently certified statement may act as a check on management recordkeeping policies and procedures, and provide more assurance that transactions are being properly recorded and that books accurately reflect overall financial condition.

Management may exercise reasonable discretion in selecting and adopting the type of books and records it uses and in formulating accounting systems and bookkeeping procedures. From the examiner's viewpoint, the test of a bank holding company's records is one of adequacy, consistency, and accuracy. The financial statements of every bank holding company must accurately reflect financial condition and operating results. This principle is applicable whether a bank holding company is small and has a relatively simple bookkeeping system or whether it is a larger institution with a fully automated system. A recordkeeping system that is capable of generating a wide variety of pertinent internal data and other information facilitates problem solving and decision making and, thus, contributes to the efficiency of a bank holding company's operations. Further, such a system serves as a convenient tool to provide directors, stockholders, and other interested parties with information on conditions in a bank holding company.

2060.3.1 INSPECTION OBJECTIVES

1. To determine whether financial statements are prepared in accordance with generally accepted accounting principles and are sufficiently detailed to accurately portray the company's financial condition.
2. To determine that sufficient records are maintained to provide detail on material balance-sheet items, income-statement items, and various contingent liabilities and off-balance-sheet risks that permit the preparation of appropriate financial information.
3. To recommend corrective action when policies and procedures employed have resulted in inadequate or inaccurate records and financial statements.

2060.3.2 INSPECTION PROCEDURES

1. The examiner should review the sections relating to audit and records in the prior inspection report and the latest examination reports of the subsidiary banks to note any comments or deficiencies cited concerning records, including any MIS deficiencies. In addition to providing an input into the overall assessment of the quality of records, the review may provide a basis for determining areas of emphasis and follow-up during the inspection.
2. The examiner should discuss recommendations and criticisms contained in such reports with an appropriate officer to ascertain what changes, if any, have taken place.
3. The examiner should review the external auditing firm's management letter, giving particular attention to comments concerning recordkeeping. Determine if any corrective actions were recommended by the external auditors and the extent to which the cited items have been corrected.
4. In those situations when it appears that records are deficient or financial statements are inaccurate, a thorough investigation of applicable transactions may be required. The purpose of the investigation is to obtain information needed in outlining improved controls over MIS, accounting methods, and records so that the financial data presented are in accordance with generally accepted accounting principles. Thus, information is provided which will better serve bank holding company management. The investigation should not necessarily involve a review of every transaction, but should involve a check of a sufficient number of transactions to ensure the examiner that the records, as checked, reflect an accurate financial condition. The extent of the review will depend largely on the procedures and controls over MIS and the condition and adequacy of the books and underlying records. During the investigative process, the examiner should be careful to distinguish between documented facts and statements of intent or interpretations set forth by company representatives.

Management of Information Systems (Structure and Reporting) Section 2060.4

The directorate and management of bank holding companies have a responsibility to contribute to the health and growth of the organization they serve. To carry out this responsibility effectively, they must be kept fully informed of conditions throughout the organization and trends within the banking industry. Reporting is the process of developing and communicating information internally to directors and management and externally to shareholders and regulatory authorities. Management and the board of directors must recognize that as a company develops and grows, its environment, strategic goals, and information needs change. The guidelines and requirements for reports flowing to management and the board of directors should be established and allow for change, recognizing the fact that informational needs can vary, including those at different levels of the organization.

Informational needs will also be dictated by the particular type of management structure in place—centralized, decentralized, legal entity, or business line. The ultimate decision-making responsibility rests with the corporation's board of directors, and the responsibility for implementing their decisions rests with designated board committees, executive management, or other designated management committees or individuals. As such, examiners should make an assessment of the qualifications of the persons on the board of directors, executive management staff, and the board and executive management committees to ensure that they have the necessary knowledge, experience, and expertise to understand the information presented and to act on it constructively. The assessment should include a review of reporting lines to identify information flows and the various decision-making levels involved or needed.

All reports flowing to executive management, board committees, and the board of directors should be analyzed for clarity, consistency, timeliness, quality, and coverage of crucial areas of the organization. A review of board and committee minutes should reveal if participants had any questions or whether there were any uncertainties as to the meaning of the data presented.

Each bank holding company prepares various reports for submission to its management and directors; an effective internal reporting system facilitates their ability to analyze a situation and to make informed decisions. Although such reports may vary in content from company to company, emphasis is generally placed on the financial data generated. The important consideration is whether each company is providing sufficient data to keep the interested parties informed of the financial condition and performance of all the divisions or entities. The frequency of the reporting and the detail of information provided can be categorized as being on a need-to-know basis. The form of reports ranges from consultations and meetings to submission of printed material for study and review. The scope and size of the operations will have an effect on the frequency and detail of the information submitted. In the larger, more sophisticated companies, frequent meetings and consultations are held to discuss the performance of various entities, the impact of performance on the organization's goals and objectives, and policies and strategies to be followed. Written reports outlining important matters and summarizing various financial data are typically reviewed and discussed regularly.

The number and variety of reports depends on the size and sophistication of the bank holding company operation. For smaller bank holding companies, the extent of their reports may be limited to annual statements, as more frequent periodic reports may not be necessary under normal conditions. The larger holding companies normally prepare monthly comparative balance sheets and income statements covering similar periods for two consecutive years. Thus, any significant deviation from the prior year's data can be readily detected. Generally, reports detailing the extent of delinquent and nonaccrual loans are prepared monthly. Facts and figures pertaining to the adequacy of the loan-loss provision are presented periodically. Additional reports containing information on budgets, cash flow, liquidity, and capital adequacy are prepared to assist management in assessing the organization's overall financial condition and performance. Summaries of internal audit reports and reports of examinations of subsidiary banks are brought to management's attention. Data relative to other bank holding companies or banks in the same peer groups are assembled, when available, so that comparisons with similarly sized organizations are possible. All of the aforementioned information may be prepared for directors, although not necessarily in as much detail as that submitted to management. On occasion, key management personnel of the holding company attend directors' meetings to expand on the topics being discussed.

Reports to shareholders usually consist of quarterly and annual reports which detail the company's financial condition and results of operations. Additional information may include the chief executive officer's overall assessment of the company, future plans, and other financial and analytical data. The financial information is used for public disclosure and enables investors, depositors, and creditors to make informed judgments concerning the financial condition of the bank holding company. Bank holding companies whose securities have been registered pursuant to the Securities and Exchange Act of 1934 are required to prepare various reports containing specific financial information.

2060.4.1 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, including board and executive management committees.
2. To determine whether the bank holding company has written policies and procedures, and internal controls covering the types of reports required to be submitted to management and the directors.
3. To determine that the required reports are adequate to accurately reflect the financial condition and performance within the organization's divisions and units and whether the reporting systems and reports are adequate to monitor the risks therein.
4. To evaluate whether the reports and reporting systems are adequate to measure and reflect the company's financial position and performance in all areas, to measure the company's progress in meeting its financial and business goals, and to monitor inherent risks.
5. To determine that the contents of the reports are complete and submitted on a timely basis.
6. To recommend corrective action when reporting practices, policies, or procedures are deficient.
7. To evaluate management's procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by reporting systems, and to evaluate the system's ability to adapt to change caused by regulatory and accounting issues or other market conditions.

2060.4.2 INSPECTION PROCEDURES

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls.
2. Ascertain whether any corporate policies address risk managment or internal reporting requirements and determine:
   a. the types of reports required to be submitted and
   b. the adequacy of such reporting requirements in light of a company's particular circumstances.

   Comment: In a holding company with a decentralized system of control over subsidiaries, the existence of written policies and procedures is important since each subsidiary operates as a relatively autonomous unit.
3. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors (including packages for the board of directors and executive committees).
4. Randomly sample, based on a material risk focus, the individual as well as the various types of management reports and determine whether they are adequately prepared in accordance with established policies and procedures and submitted to the appropriate individuals on a timely basis. Determine whether the management reports are sufficient to measure the company's progress in achieving its financial and business goals and forecasts.
5. Identify and document management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Also evaluate the ability of the information system to handle regulatory and accounting issues and to adapt to change.
6. At the conclusion of the review process, the examiner should discuss with management, as appropriate, topics such as—
   a. the lack of established policies and procedures and internal controls,
   b. inadequate reporting requirements, and
   c. noncompliance with reporting requirements and/or the untimely submission of reports.

2060.4.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Registration, reports, and examinations or inspections		225.5		
Reporting requirements emanating from the Securities Exchange Act of 1934	15 USC 78a et seq.

2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

2060.5.1 INTRODUCTION

In establishing an insurance program, a bank holding company should be aware of where it is exposed to loss, the extent to which insurance is available to cover potential losses and the cost of such insurance. These various factors should be weighed to determine how much risk the bank holding company will assume directly. In assessing the extent of risk an organization is willing to assume, it is important to analyze the impact of an uninsured loss not only on the entity where the loss occurs, but also on the affiliates and the parent. Once appropriate coverage has been acquired, procedures should be established for the periodic review of the program to assure the continuing adequacy of the coverage. Particularly for larger BHCs, these procedures should include at least an annual review of the program by the board of directors of the parent organization.

Insurance is a highly specialized field and no attempt is made here to discuss all the various types and forms of insurance coverage that are available to financial institutions. Examiners are not expected to be insurance experts; however, examiners should recognize that a financial organization's primary defenses against loss include adequate internal controls and procedures and that insurance is intended to complement, not replace, an effective system of internal controls. Thus, an overall appraisal of the control environment becomes a significant consideration in assessing the adequacy of the insurance program. To the extent controls are lacking, the need for additional coverage increases.

2060.5.2 BANKER'S BLANKET BOND

The most important and comprehensive insurance coverage available is the bankers' blanket bond which is usually extended to encompass all the entities in a bank holding company structure. Generally, the scope of the blanket bond contract is intended to cover risks of loss due to criminal acts, such as embezzlement, burglary, robbery, theft, larceny, forgery, etc., but in addition it provides indemnity for loss of property through damage, destruction, misplacement and mysterious, unexplainable disappearance. The most important item of protection under the bond, however, is the blanket fidelity coverage for officers and employees.

2060.5.3 TYPES OF BLANKET BONDS

While there are several similar forms of blanket bonds in use, those commonly found are the Financial Institutions Bond Standard Form No. 24, the Bankers Blanket Bond Standard Form No. 2, and Lloyd's Banks' and Trust Companies' Policy HAN Form (C). Under these blanket forms, every employee is usually covered for the total amount of the bond. Typically, new employees and new offices are automatically covered and no notice is required for an increase in the number of employees or in the number of offices established, unless such increases result from a merger or consolidation with another institution. The word "blanket," however, refers to the over-all amount that applies to the several specified risks covered under the bond and is not intended to mean "all risks" coverage. A most important feature of the bankers' blanket bond is the "discovery rider." The rider, which converts the blanket bond from a "loss sustained basis" to a "discovery basis," provides indemnity against any loss sustained by the insured entity at any time but discovered after the effective date of the bond and prior to the termination or cancellation of the bond, even though lower amounts of insurance and more restrictive coverage may have been carried when the loss was actually sustained.

2060.5.4 DETERMINING THE COVERAGE NEEDED

One of the most difficult insurance problems management faces is the determination of the amount of blanket bond coverage that should be maintained. An estimate of the maximum amount of money and securities that may be lost through burglary or robbery can be calculated with reasonable accuracy, but the potential loss resulting from dishonest acts of officers and employees is not easily measured. The Insurance and Protective Committee of the American Bankers Association has conducted several studies of the problems of determining adequate coverage and has concluded that total deposits represent the most appropriate item in bank financial statements upon which to base an estimate of a reasonable or suitable amount of blanket bond coverage.

In a bank holding company structure, the amount of blanket bond coverage is generally determined by the deposits of the largest bank and the amount of suggested coverage in the ABA's schedule. Such an amount is considered to be a minimum and other factors such as a rapidly expanding operation, excessive cash on hand, or inferior audit and control practices may suggest the need for larger coverage. Since coverages are generally extended to include the nonbank subsidiaries and such subsidiaries usually operate on a smaller scale than their affiliated banks, the question concerning the adequacy of the amount of the blanket bond coverage for a nonbank subsidiary is more easily addressed and is typically a function of the parent's and the bank's coverage.

2060.5.5 NOTIFICATION OF LOSS

When submitting a claim, most blanket bonds have provisions which require a report to be submitted within a specified period after a reportable item comes to the attention of management. Occasionally, items are not reported to the bonding company because of uncertainty as to whether the incident constitutes a reportable item. Failure to report in a timely manner could invalidate the claim and jeopardize existing coverages. Thus, it should be emphasized to management that any questionable items should be reported.

2060.5.6 DIRECTORS' AND OFFICERS' LIABILITY INSURANCE

Directors' and Officers' Liability Insurance ("DOL Insurance") insures the Directors and Officers against *personal* liability resulting from claims of alleged negligence, wrongful acts, errors and omissions, etc. This insurance is not included in the blanket bond or other standard fidelity coverage.

2060.5.7 INSPECTION OBJECTIVES

1. To determine the scope and extent of insurance coverages for the various entities in the organization.
2. To determine the adequacy of insurance coverage after giving due consideration to the overall control environment and factors such as the organization's claim experience and costs associated with various coverages.
3. To ascertain that a comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes.
4. To determine the entity(ies) responsible for paying the premiums and the manner in which such payments are allocated among the affiliates that receive the coverage benefits.
5. To determine if procedures are in place to assure that claims are filed promptly.

2060.5.8 INSPECTION PROCEDURES

1. The prior year's inspection report should be reviewed for comments relative to controls and insurance. The examiner should note the types and extent of coverages, comments concerning the control environment and any deficiencies related to the administration of the insurance program and the coverages in force.
2. A similar review encompassing the latest examination reports of all major affiliated banks should be conducted. The review process is intended to provide a basis for determining areas of emphasis and follow-up during the inspection. The examiner need not re-examine the insurance program or the controls in force in the individual banks.
3. The examiner should meet with the officer responsible for maintaining the insurance policies and related documentation and ascertain the location of such policies and documentation. Review any independent review of coverages and any deficiencies that may have been cited by the internal or external auditors.
4. Review the manner and frequency of presentations to the board of directors of the insurance coverage.
