PROPOSAL RATING SHEET

<u>No.</u>	<u>Title</u>	<u>Investigator</u>	<u>Institution</u>
B-3147	Interchromosomal effect on crossing over & segregation in <u>Drosophila</u>	Stanley Zimmering	Trinity Col.

Dr. Zimmering is another of the bright young men who are putting new life into Drosophila Genetics after an interval of relative dormancy while the fads of biochemical and microbial genetics dominated the stage. His thesis was a skillful job of cytogenetic analysis, and the proposal shows equal ingenuity in an attack on a new problem of fundamental importance. He is teaching at a smaller school with limited resources, and both he and the institution should be encouraged in research development.
