Emergency Action Plan Checklist

Gener	General Issues				
	Does the plan consider all potential natural or man-made emergencies that	Common sources of emergencies identified in emergency action plans include - fires, explosions, floods, hurricanes,			
	could disrupt your workplace?	tornadoes, toxic material releases, radiological and biological accidents, civil disturbances and workplace violence.			
	Does the plan consider all potential internal sources of emergencies that could	Conduct a hazard assessment of the workplace to identify any physical or chemical hazards that may exist and could			
	disrupt your workplace?	cause an emergency.			
	Does the plan consider the impact of these internal and external emergencies	Brainstorm worst case scenarios asking yourself what you would do and what would be the likely impact on your			
	on the workplace's operations and is the response tailored to the workplace?	operation and device appropriate responses.			
	Does the plan contain a list of key personnel with contact information as well	Keep your list of key contacts current and make provisions for an emergency communications system such as a cellular			
	as contact information for local emergency responders, agencies and	phone, a portable radio unit, or other means so that contact with local law enforcement, the fire department, and others			
	contractors?	can be swift.			
	Does the plan contain the names, titles, departments, and telephone numbers of	List names and contact information for individuals responsible for implementation of the plan.			
	individuals to contact for additional information or an explanation of duties				
	and responsibilities under the plan?				
	Does the plan address how rescue operations will be performed?	Unless you are a large employer handling hazardous materials and processes or have employees regularly working in			
		hazardous situations, you will probably choose to rely on local public resources, such as the fire department, who are trained, equipped, and certified to conduct rescues. Make sure any external department or agency identified in your plan			
		is prepared to respond as outlined in your plan. Untrained individuals may endanger themselves and those they are trying			
		to rescue.			
	Does the plan address how medical assistance will be provided?	Most small employers do not have a formal internal medical program and make arrangements with medical clinics or			
	2 000 me plan address now medical assistance win so provided.	facilities close by to handle emergency cases and provide medical and first-aid services to their employees. If an			
		infirmary, clinic, or hospital is not close to your workplace, ensure that onsite person(s) have adequate training in first			
		aid. The American Red Cross, some insurance providers, local safety councils, fire departments, or other resources may			
		be able to provide this training. Treatment of a serious injury should begin within 3 to 4 minutes of the accident. Consult			
		with a physician to order appropriate first-aid supplies for emergencies. Establish a relationship with a local ambulance			
		service so transportation is readily available for emergencies.			
	Does the plan identify how or where personal information on employees can be	In the event of an emergency, it could be important to have ready access to important personal information about your			
	obtained in an emergency?	employees. This includes their home telephone numbers, the names and telephone numbers of their next of kin, and			
		medical information.			
Evacı	nation Policy and Procedure				
	Does the plan identify the conditions under which an evacuation would be	The plan should identify the different types of situations that will require an evacuation of the workplace. This might			
	necessary?	include a fire, earthquake, or chemical spill. The extent of evacuation may be different for different types of hazards.			
	Does the plan identify a clear chain of command and designate a person	It is common practice to select a responsible individual to lead and coordinate your emergency plan and evacuation. It is			
	authorized to order an evacuation or shutdown of operations?	critical that employees know who the coordinator is and understand that this person has the authority to make decisions			
		during emergencies. The coordinator should be responsible for assessing the situation to determine whether an			
		emergency exists requiring activation of the emergency procedures, overseeing emergency procedures, notifying and coordinating with outside emergency services, and directing shutdown of utilities or plant operations if necessary.			
	Does the plan address the types of actions expected of different employees for	The plan may specify different actions for employees depending on the emergency. For example, employers may want			
	the various types of potential emergencies?	to have employees assemble in one area of the workplace if it is threatened by a tornado or earthquake but evacuate to an			
	and tarrous types of potential emergencies.	exterior location during a fire.			
	Does the plan designate who, if anyone, will stay to shut down critical	You may want to include in your plan locations where utilities (such as electrical and gas utilities) can be shut down for			
	operations during an evacuation?	all or part of the facility. All individuals remaining behind to shut down critical systems or utilities must be capable of			
	•	recognizing when to abandon the operation or task and evacuate themselves.			
	Does the plan outline specific evacuation routes and exits and are these posted	Most employers create maps from floor diagrams with arrows that designate the exit route assignments. These maps			
	in the workplace where they are easily accessible to all employees?	should include locations of exits, assembly points and equipment (such as fire extinguishers, first aid kits, spill kits) that			
		may be needed in an emergency. Exit routes should be clearly marked and well lit, wide enough to accommodate the			
		number of evacuating personnel, unobstructed and clear of debris at all times, and unlikely to expose evacuating			
		personnel to additional hazards.			
	Does the plan address procedures for assisting people during evacuations,	Many employers designate individuals as evacuation wardens to help move employees from danger to safe areas during			
	particularly those with disabilities or who do not speak English?	an emergency. Generally, one warden for every 20 employees should be adequate, and the appropriate number of wardens should be available at all times during working hours. Wardens may be responsible for checking offices and			

		bathrooms before being the last person to exit an area as well as ensuring that fire doors are closed when exiting.
		Employees designated to assist in emergency evacuation procedures should be trained in the complete workplace layout
		and various alternative escape routes. Employees designated to assist in emergencies should be made aware of employees
		with special needs (who may require extra assistance during an evacuation), how to use the buddy system, and any
		hazardous areas to avoid during an emergency evacuation.
	Does the plan identify one or more assembly areas (as necessary for different	Accounting for all employees following an evacuation is critical. Confusion in the assembly areas can lead to delays in
	types of emergencies) where employees will gather and a method for	rescuing anyone trapped in the building, or unnecessary and dangerous search-and-rescue operations. To ensure the
	accounting for all employees?	fastest, most accurate accounting of your employees, consider taking a head count after the evacuation. The names and
		last known locations of anyone not accounted for should be passed on to the official in charge.
	Does the plan address how visitors will be assisted in evacuation and	Some employers have all visitors and contractors sign in when entering the workplace. The hosts and/or area wardens, if
	accounted for?	established, are often tasked with assisting these individuals evacuate safely.
Repo	rting Emergencies and Alerting Employees in an Emergency	
	Does the plan identify a preferred method for reporting fires and other	Dialing 911 is a common method for reporting emergencies if external responders are utilized. Internal numbers may be
	emergencies?	used. Internal numbers are sometimes connected to intercom systems so that coded announcements may be made. In
		some cases employees are requested to activate manual pull stations or other alarm systems.
	Does the plan describe the method to be used to alert employees, including	Make sure alarms are distinctive and recognized by all employees as a signal to evacuate the work area or perform other
	disabled workers, to evacuate or take other action?	actions identified in your plan. Sequences of horn blows or different types of alarms (bells, horns, etc.) can be used to
	, and the second	signal different responses or actions from employees. Consider making available an emergency communications system,
		such as a public address system, for broadcasting emergency information to employees. Ideally alarms will be able to be
		heard, seen, or otherwise perceived by everyone in the workplace including those that may be blind or deaf. Otherwise
		floor wardens or others must be tasked with ensuring all employees are notified. You might want to consider providing
		an auxiliary power supply in the event of an electrical failure.
		an administ point supply in the event of the electron fathers.
Empl	oyee Training and Drills	
	Does the plan identify how and when employees will be trained so that they	Training should be offered employees when you develop your initial plan and when new employees are hired.

Employee Training and Drills				
	Does the plan identify how and when employees will be trained so that they understand the types of emergencies that may occur, their responsibilities and actions as outlined in the plan?	Training should be offered employees when you develop your initial plan and when new employees are hired. Employees should be retrained when your plan changes due to a change in the layout or design of the facility, when new equipment, hazardous materials, or processes are introduced that affect evacuation routes, or when new types of hazards are introduced that require special actions. General training for your employees should address the following: Individual roles and responsibilities; Threats, hazards, and protective actions; Notification, warning, and communications procedures; Emergency response procedures; Evacuation, shelter, and accountability procedures; Location and use of common emergency equipment; and Emergency shutdown procedures. You may also need to provide additional training to your employees (i.e. first-aid procedures, portable fire extinguisher use, etc.) depending on the responsibilities allocated employees in your plan.		
	Does the plan address how and when retraining will be conducted?	If training is not reinforced it will be forgotten. Consider retaining employees annually.		
	Does the plan address if and how often drills will be conducted?	Once you have reviewed your emergency action plan with your employees and everyone has had the proper training, it is a good idea to hold practice drills as often as necessary to keep employees prepared. Include outside resources such as fire and police departments when possible. After each drill, gather management and employees to evaluate the effectiveness of the drill. Identify the strengths and weaknesses of your plan and work to improve it.
