P R O C E E D I N G S

1  
2 DR. WILSON: Let's go back. This will be official  
3 and on the record. There is another council meeting, the  
4 Council on Alcoholism and Alcohol Abuse and I promised to spend  
5 some time with them.

6 One thing I would like to discuss with the council  
7 before I leave, one of the time honored techniques for working  
8 with councils that this agency has not used, at least to any  
9 great extent, is the use of a small, either executive or program  
10 committee out of the council that looks at the agenda in advance  
11 and very often a brief or sometimes not so brief executive  
12 session of the council the evening before the regular meeting,  
13 which is just an informal meeting so that people can let down  
14 their hair and talk about issues that may or may not be on the  
15 agenda.

16 I am more than willing to make myself available  
17 and evenings are a little more controllable than days. As I  
18 told a number of you we have about 69 councils and committees.  
19 I don't meet with all of them but I do meet with several of  
20 them. As a for instance, this morning there are two meetings  
21 simultaneously. I will be splitting my time.

22 I would like your sort of general reaction to whether  
23 you think that sort of a way to talk about the things that  
24 come up on the agenda or the things that don't come up on the  
25 agenda. Would you believe that would be helpful from your

nb-2

1 point of view? What would be your reaction? It takes additional  
2 time and effort; on the other hand, it gives you more of an  
3 opportunity, I think, to participate in the issues that will be  
4 brought before the council.

5 DR. SCHREINER: I think it would be very, very  
6 helpful. I think it probably should be something scheduled  
7 fairly late so people who fly short distances won't be losing  
8 work time, I think something like an informal session at  
9 8:30 or something of that sort would make a very excellent  
10 arrangement.

11 DR. WILSON: Do you usually stay in the same hotel  
12 or motel, those of you who stay in town?

13 MRS. WYCKOFF: We could.

14 DR. WILSON: Any connoisseurs of hotels here? Once  
15 in awhile you run into the fact that some people like one hotel  
16 and another likes another. When you try to hold an evening  
17 meeting, if you hold it late --

18 MRS. WYCKOFF: Between the Linden Hill and the Holiday  
19 Inn now --

20 MRS. MARS: One is equally as bad as the other.

21 DR. CANNON: I was thinking about where would be  
22 most convenient for you.

23 DR. WILSON: Linden Hill, Howard Johnson, fine.

24 I have no problem any place in the area.

25 MRS. MARS: Are you suggesting this before the

1 meeting again?

nb-3

2 DR. WILSON: Yes. What I am saying is -- one of the  
3 ways NIH does this a great deal is have an evening meeting before,  
4 don't force the agenda, just have a meeting at which the -- there  
5 is an open invitation to put items on the table. If you use  
6 a program committee of some kind, two or three out of the group  
7 to sort of look at the agenda in advance, they can then use  
8 their judgment on items where we may not always be sensitive  
9 to the issues involved.

10 You know, maybe we need more contact in advance of  
11 the evening meeting.

12 MRS. MARS: A preconceived opinion, on the other  
13 hand, is not perhaps a satisfactory spontaneous reaction.

14 DR. WILSON: I don't think, though, judging from  
15 my experience that we are going to get away from preconceived  
16 opinions any way.

17 I guess I would like to have them as educated as  
18 possible. Well, I am not trying -- maybe what you would like  
19 to do is think about it and, Harold, you could handle this as  
20 one of the items later on in the day.

21 I wanted to introduce it because I do have some feelings  
22 that we are not providing as much opportunity for the council to  
23 maybe participate in the design of its own discussions as you  
24 might like and which certainly I have had in other councils.

25 MRS. WYCKOFF: We are going to have a lot of new

nb-4

1 members and all their attention is going to be very important.  
2 Maybe this process would be helpful for the next  
3 year.

4 DR. SCHREINER: I think it should be an informal  
5 meeting and not a briefing like you have in the morning session.

6 DR. WILSON: No. No. We are not talking about  
7 getting everything together and talking at them. This is  
8 more a chance of saying we have an agenda, what we leave off  
9 of it, what would you like to have for tomorrow morning, what  
10 are the other issues, some of the tid bits I have shared here  
11 this morning.

12 You could share in that kind of a session where  
13 you won't whare on the record.

14 MRS. WYCKOFF: It would be off the record?

15 DR. WILSON: Right.

16 Well, why don't you sort of go through that, Harold,  
17 after they have had a little chance to think about it and go  
18 through the applications.

19 I appreciate all the time you have spent. I am sorry  
20 to set your day back by an hour but I had a feeling that we  
21 stood a chance of getting set back more than that if we didn't  
22 get some sort of a general understanding.

23 MRS. WYCKOFF: It was very worthwhile.

24 End of #1

25 Thank you.

dh-1

1 DR. MARGULIES: There's one thing -- I think we can  
2 get back on the agenda now, and go through the reviews, which  
3 are coming up. There is one thing that I wanted to bring to  
4 your attention. We mentioned it in brief yesterday. It will  
5 mean considerably more to some people here than to others, but  
6 it's helpful to know that there are some new coordinators or  
7 some actions pending on new coordinators which are of interest,  
8 and I will just run through them and they will be part of the  
9 record.

10 You may recall that in Colorado, Wyoming, Pete Geone  
11 had retired on a mandatory basis. They have selected a new  
12 coordinator, Dr. Tom Nicholas, whom many of you know. He was  
13 chairman of the regional advisory group that went on site visits  
14 and is an excellent choice. The final choice was between him  
15 and the deputy coordinator who, liked Tom so well, and liked  
16 Colorado, Whoming so well that he is staying on in any case.

17 Michigan: Picked Dr. Tupper as their coordin-  
18 ator.

19 Mountain States, Al Poppa resigned on a mandatory  
20 age basis and John Gurtis, who has been acting as coordinator  
21 has been selected as permanent coordinator.

22 I think those who know him would agree this is an  
23 excellent choice.

24 Rochester has a new coordinator, Dr. Peter Mott. His  
25 brother is the head of the B Agency. Depending on how siblings

dh 2

1 get along, that's going to be good or bad.

2 Tristate has a new coordinator, Leona Bomgartner has  
3 has resigned. The committee picked Bob murphy, who has the  
4 one with Tristate, and later was the assistant regional director  
5 for the regional office in Boston and is now coming over to be  
6 the director of the Tristate program. That has not taken place  
7 yet officially.

8 Inidana, Dr. Stonehill resigned and there is an  
9 acting coordinator, Dr. Berg from the medical school, associate  
10 dean, but I get the impression that -- I don't know if they're  
11 planning to have him permanently, but they have a search com-  
12 mittee out.

13 Intermountain, Dr. Satafvic has decided he wants to  
14 return to clinical medicine rather than remain on as the coor-  
15 dinator in intermountain. There is a search committee out.

16 North Dakota, Dr. Wright resigned as of July 1.  
17 They will be seeking a new coordinator for that program.

18 Dr. Groom has also resigned in Oklahoma and there is  
19 a search for a new coordinator. Incidentally, each of these  
20 programs, when looking for coordinators has no difficulty in  
21 getting a rather remarkable list of applicants and some have  
22 attractive ones. You know Ohio is in the process of seeking  
23 one in their new coalition between the former Toledo and Colum-  
24 bus organizations, and Delaware, which is in the process of  
developing on a planning basis, has a coordinator yet to be

dh 3

1 named.

2 We are going to try to support in an informal way,  
3 the efforts of people to find coordinators or to indicate their  
4 interest in becoming one. RMPS doesn't want to become an em-  
5 ployment placement bureau under any circumstances.

6 On the other hand, it's very helpful to know when  
7 there is some one available or when there is a vacancy and to  
8 be of some assistance.

9 It's a matter of orientation to new members, the  
10 selection of a coordinator is the business of the regional  
11 medical program and has the stamp of authority, as you agreed  
12 yesterday, of regional advisory group recommendations, and grantee  
13 selection. Our responsibility and in RMPS, is to endorse the  
14 individual. We do not enter into the selection.

15 We do, sometimes, give whatever information we have  
16 or provide any help that we can, but we in no way interfere with  
17 the process. Our acceptance is pro forma unless there is some-  
18 thing extraordinarily wrong about the individual.

19 One, the question arising regularly about new coor-  
20 dinators, particularly now, is whether he has to be an MD or not.  
21 We have in no way felt that the availability of an MD was a  
22 requirement, particularly when a program is strong, well devel-  
23 oped, has its basis established.

24 They're really looking for someone to do the job well  
25 and from the recent selections, you will see some of those

dh 4

1 being chosen and some of those who performed remarkably well  
2 have not been MD's. The Tristate has been Bob Logenshow  
3 pretty much. He is not an MD, and you will recall that pro-  
4 gram has changed from real trouble in early council reviews  
5 to a really very strong one.

6 Gurtis is a PhD., not an MD, and in West Virginia,  
7 Charlie Holland is not an MD. All these programs have done well.

8 Our question is really, is he the right person for  
9 the job, and what kind of a degree he has is incidental.

10 Now, I think we can probably turn at this point to the  
11 reviews, unless there is another agenda item.

12 Okay? You want to talk about HMO's?

13 (Laughter)

14 DR. PAHL: I think the council has probed enough of  
15 HMO's.

16 I would like to ask before we get into the reviews  
17 whether there are any particular travel schedules which would  
18 indicate taking these up in any given order of priority.

19 Dr. Cannon has indicated he will have to leave just  
20 before lunch. Do the travel schedules have others --

21 MR. WATKINS: Two o'clock.

22 MR. MILLIKEN: Three thirty.

23 MRS. MARS: Four thirty.

24 DR. PAHL: We're in fine shape on that.

25 DR. MC PHEDRAN: Two thirty.

dh 5

1 DR. PAHL: I think we are in good shape. Perhaps,  
2 then, I think we might start off with the Nassau Suffolk applica-  
3 tion which is the second tab in your book, and I would like to  
4 -- before taking this up, with Dr. Komaroff as the principal  
5 reviewer, I would like to have Mr. Gardell present a brief  
6 statement to you.

7 This particular region, as the older council members  
8 know, has a peculiar CHP~~X~~ and <sup>agreement</sup> arrangement, and I think in  
9 setting the stage for the discussion, it would be help ful if  
10 we have a few words.

11 MR. GARDELL: We made a presentation similar to this  
12 to the committee, and the committee suggested we share it with  
13 the council.

14 We have been working for quite a while now with the  
15 Nassau-Suffolk group, in the Northern regional office, trying  
16 to develop means for coming up with a single<sup>le</sup> application and a  
17 single award which involved the CHP program and the RMP.

18 It's not too simply done from the stand point of  
19 the mechanics, but organizationally, they are working in this  
20 fashion. All of the administrative and the staff activities  
21 are combined and the only breakaway that we have is really  
22 our project activity up there so that if we were to establish  
23 a percentage of activities there, and fund them in that fashion,  
24 I think we could probably have a single application and a single  
25 award.

dh 6

1 Now this is really a convenience. It's not a --  
2 it's not a must, but the program is -- the organization is set  
3 up in such a fashion that it lends itself to this.

4 For instances, Dr. Hastings is about 50-50 on the  
5 two staffs. I'm sure these will be brought out in some extent  
6 although he didn't know prior to this we were contemplating  
7 this. We have to move fast, too, to get it done.

8 We have an application in from them, from CHB. We  
9 have sat with the regional office. We pretty much know what  
10 the joining efforts will be and we can develop one application  
11 which will be probably what we call a joint application because  
12 there will have to be two separate organizations from the looks  
13 of it.

14 There is such a policy emanating from the Department  
15 to accomplish this. Now, this is all kind of a forerunner to  
16 what is actually happening throughout the Government today.  
17 As you know, probably have read, there is a great effort toward  
18 coming with one large application and allowing the various  
19 Federal agencies, either singly, or jointly, to fund such ac-  
20 tivities.

21 We have two offices now in the -- at the Department  
22 level, one called grant -- Integrated Grant Administration,  
23 and that's mainly for state and local agencies and then the  
24 other is the Switching Stations program which has to do with  
25 the project type activities throughout the Department where

dh 7

1 they can pull all the various grants together into one applica-  
2 tion, wherever this is feasible.

3 Now we're trying to better that by having a similar  
4 type of a program here within HSMHA, and I have been working with  
5 a staff -- what do you call him, a task force, I guess in the  
6 administration office, trying to pull together the health  
7 related programs within HSMHA to the extent possible.

8 Now we haven't done it before, but this seems to be  
9 a natural. Dr. Hastings would like to have it that way, and I  
10 think we can do it. It wouldn't cost us any more than we  
11 presently would be funding them as you will review the applica-  
12 tion today, and we can have a co-terminous program period for  
13 the two activities, and they're so interrelated, that when a  
14 person goes out to work for CHP, he is automatically involved  
15 in some RMP activities.

16 As a matter of fact, one day talking about it on the  
17 phone to Dr. Hastings, he said, "I really don't know whether to  
18 charge this call to RMP, or CHP, because it really involves  
19 both of the programs." Which is kind of typical.

20 The committee's response to our efforts here is that  
21 if we can work it out, and it doesn't affect a program, as  
22 far as they're concerned, it would be all right to proceed,  
23 provided it has council blessings as well. We are bringing it  
24 to your attention this morning. We will continue our efforts  
25 if you see any problem with this, and I think in your presen-

dh 8

1 tation, maybe it will become obvious that this is a natural.

2           It is strictly administrative. There is no question  
3 about it. We would in all likelihood be the lead agency which  
4 means that Dr. Margulies would be signing the award, but it  
5 probably would have to be a joint award.

6           What I mean to say is we will administer the funds,  
7 but probably have a joint award. We will have to follow the  
8 procedures that come from the Department on that -- what they  
9 call the joing applicant procedure.

10           So, if there are any questions on it, this is just  
11 basically it. It really isn't too involved from a program  
12 point of view. It's just strictly administrative.

1 DR. KOMAROFF: Let me discuss the region and the RMP,  
2 CHP mix as it looked, and ask you some questions that I don't  
3 have an understanding of.

4 This region received a professional from Council  
5 last year, but at the same time council recommended a repeat  
6 site visit after one year. It has been operational for one year.

7 The highlights of this site visit, which was last  
8 March, were that the region had done a very good job with  
9 identifying specific objectives and giving a clear priority  
10 ranging to individual objectives and linking up proposed project  
11 activities to each one. They were really functional guidelines  
12 rather than paper priorities.

13 They also had a very well organized data base that  
14 they had collected in a non-duplicating effort with ~~CHP~~, the  
15 Long Island Health Hospital Planning Council and other  
16 planning groups who were effectively functioning as one health  
17 planning force for Long Island.

18 With regard to the CHP issue, there was fairly good  
19 evidence that this was one of the concerns of the site visit the  
20 previous year, that despite the close identification of RMP with  
21 CHP, that it was good prior acceptance of RMP, of the joint  
22 staff and the kind of efforts that RMP was providing.

23 The private physicians and health facilities of  
24 Long Island regarded RMP clearly as the source of information and  
25 consultation in health care delivery issues, planning HMOs,

mm2 1 developing review standards, and the like.

2           They had a very good tie as well with consumer groups  
3 through 19 CHP local area planning groups that had a very firm  
4 consumer base and with good access to the joint RMP-CHP  
5 administration.

6           And the site visitors found that Hastings, the  
7 coordinator, and his staff, were all capable people. The only  
8 problem of any consequence that was identified by the site  
9 visit team was the lack of minority group representation in a  
10 formal way on the advisory group and particularly on the  
11 executive committee in goals and aims committees and that criti-  
12 cism I think we should relay to the region.

13           The action in terms of dollars is as follows:  
14 currently the region is funded at about the \$800,000 level.  
15 They requested RMP support alone 1.3 million and the site visitors  
16 on an itemized basis approved the expenditure of 1.1 million,  
17 roughly. That would include support for developmental  
18 component, continuation of seven ongoing projects, the funding of  
19 approved, but unfunded activity, and the startup of three new  
20 project proposals.

21           It would also include disapproval of their home  
22 dialysis project which we did not review at all. I will hold  
23 off any action on that particular project. There are two  
24 issues, broad issues raised by the region.

25           The first is the separation of RAG and grantee. This

mm3 1 region initially would have preferred to make the RAG and  
2 the grantee synonomous bodies, a non-profit corporation  
3 would be the grantee and that corporation would have as its  
4 board of trustees or directors, a group of people who fulfilled  
5 the requirements for also being an advisory group.

6           Because of various negotiations with RMPS they have  
7 accommodated to a posture where they formally separate the two  
8 and they may no longer in fact be interested in having a joint  
9 group.

10           But I thought council should consider the issue  
11 which was not addressed directly in the much improved  
12 description of what a RAG and a grantee are, of whether a RAG  
13 could constitute itself as the grantee if the board of  
14 directors of that grantee fulfilled all of the requirements of  
15 being a RAG.

16           It is an interesting question for the future, I  
17 think, as the -- as more RMPs move in the direction of  
18 having the grantee become a non-profit organization rather than  
19 the medical school or some fiscal agency which is associated  
20 closely with one health agency in a region.

21           The RMP-CHP merge in this region is very  
22 tight as Jerry described. The two staffs are really one. They  
23 are funded out of different pockets, but they live together.  
24 Hastings, the coordinator, is paid 50 percent by RMP and 50  
25 percent by CHP. They have separate advisory councils, but all

mm4

1 of the sub-councils of both the RMP advisory council, and CHP  
2 are jointly constituted so that at the action level of the  
3 advisory structure is also united.

4           This proposal to actually make one award which would  
5 support both RMP and CHP activities has the following features:  
6 The CHP currently has as I understand it, Jerry, a five-year  
7 guarantee and although CHP doesn't have a five-year appropriation  
8 CHP apparently would be willing to accept a two-year reduction  
9 and to start on September 1 with a continuing triennial  
10 commitment, is that right?

11           MR. GARDELL: That is correct.

12           DR. KOMAROFF: Now I am not clear whether the advisory  
13 groups of both the RMP and CHP have approved of this kind of  
14 funding mechanism. I know Hastings has, and I gather the  
15 regional office has.

16           MR. GARDELL: The regional office has the RMP itself.  
17 The organization itself has accepted --

18           DR. KOMAROFF: The advisory group has voted on it.

19           DR. PAHL: Please speak up. The recorder has to  
20 hear you.

21           MR. GARDELL: I don't know if they have voted on  
22 it. I did not go up there myself, but the staff has been up  
23 there. I don't remember their t alking about the advisory  
24 groups having voted on it.

25           I think from what we hear that this is exactly the

mm5

1 route they want to go.

2 It isn't going to affect the programs at all except  
3 as Tony mentioned, cutting back the CHPs to three years, and  
4 as I recall, I think that five years is a maximum, and it can  
5 be less than. So it does not have to be a five-year.

6 DR. KOMAROFF: What happens to pressure on RMP  
7 dollars if CHP funding drops and any matching funds aren't  
8 available or something of that sort?

9 MR. GARDELL: We would establish a percentage and the  
10 only thing that concerns me there -- that is why I say all of  
11 this is not ironed out yet -- if the percentage would have to  
12 drop, we would have to make certain that our part of the bargain  
13 is carried out.

14 In other words, the RMP portion of the grant can  
15 continue, whereas the CHP might drop, but we don't want to be  
16 replacing CHP funds in the event that they can't make it or come  
17 up with 50 percent matching. That is why we must establish  
18 some sort of percentage for our share so that if theirs goes  
19 down, ours would go down proportionately, but it could not  
20 affect our program adversely.

21 DR. KOMAROFF: It strikes me as if this is more than  
22 just a fiscal convenience. What is the nature of the pressure  
23 from anywhere in this building to establish this kind of a  
24 fiscal --

25 MR. GARDELL: It isn't just this building. It is

mm6

1 The administration. It comes from the Office of Management and  
2 Budget, and they are very intent upon passing more and more  
3 simplification and also larger amounts of funds to large  
4 organizations and activities out in the -- throughout the country  
5 and they are starting mainly with the state and local agencies,  
6 but it is moving into the project grant activities as well.

7           This will be our first attempt. There are many  
8 programs in HSMHA that are doing this right now, and inter --  
9 intra-agency, get the right one -- for instance, the Chicago  
10 grant which I remember has NIMH, SRS, and OE all involved in a  
11 \$2 million grant a year; and it definitely is -- this is not as  
12 vast, of course. The pressures are on.

13           In other words, when that grant was started, they were  
14 all directed -- they were going to have this grant, that is the  
15 way it was going to go, and that portion of it is yours. It  
16 is there and we thought that it -- here was a natural.

17           If we can work it out, we have -- we have started in  
18 what the administration is attempting to do in a very small  
19 way.

end 3

20

21

22

23

24

25

swl 1 DR. KOMAROFF: Swell, how does this sound to you in  
2 your experience?

3 MR. MILLIKEN: It sound feasible. It goes hierh, of  
4 course, than any other experience in the country today and I  
5 haven't had a chance to study this in detail, but in terms of  
6 the opportunities in both programs to share common advantages,  
7 this seems to be one.

8 DR. KOMAROFF: Before I move on the issues, is there  
9 any discussion?

10 Okay --

11 DR. BRENNAN: How do the two advisory groups retain  
12 their particular kind of mission? Do the -- in CHP you have  
13 something at the state level which is -- has a number of find-  
14 ings of the governor on it and very heavily weighted -- but on  
15 RMP you don't have any involvement of the state government and  
16 the political -- local political world to speak of, you just  
17 don't have an obvious level and you have got -- what the  
18 profession and the hospitals and nurses all the rest, think  
19 of as a sort of a very independent kind of coordinated agency.

20 Now, if a rock came, as far as funds were concerned,  
21 and you had a very close interlock of the two activities, and  
22 the one had an awful lot more political clout than the other,  
23 I think that no matter what rules you make about how you are  
24 going to split the money that that -- you would have a hard  
25 time in that kind of a composition defending the RMP budgets

sw2

1 because what would happen is that the group would tend to dis-  
2 place whatever funding it had into the programs that has a  
3 larger constituency, the more potent constituency.

4 I am a little worried about this.

5 DR. KOMAROFF: That coverage hasn't come.

6 Currently the two advisory groups communicate with  
7 each other. I think they have 26 members who wear different  
8 hats, but sit on both groups and they support activities of a  
9 combined staff whose identification is always vague, necessarily,  
10 and cannot come into any conflict yet, but it is exactly the  
11 question you raised in what would happen if the pressure on  
12 RHP dollars and direction if CHP funding got tight.

13 I don't know how you would predict the answer to  
14 that question.

15 I am inclined to say since this hasn't been tried  
16 anyplace else and since there is pressure to do it this might  
17 be an opportunity to find out.

18 MR. STOLOV: In the bylaws they state in the event of  
19 a dispute between the RAG and grantee -- I don't know if that  
20 answers your question.

21 MR. GARDELL: We are talking about the organization  
22 remaining as they are and funding them jointly with one  
23 application and one award.

24 Probably the single benefit to be gained from this  
25 really is that the -- it is so difficult now to breakout the

sw3

1 costs between the two programs from the administrative point of  
2 view that I have a hunch that they have some audit exceptions,  
3 because we just don't have it that clearly defined.

4 We went up and helped them set up their accounts  
5 and everything so that they would be charging in some sense  
6 properly to each one of the two branches. But there is about a  
7 40 percent vague area there in the program staff that really  
8 can't be tied down.

9 DR. BRENNAN: That is because there is at least a  
10 40 percent overlap between the programs anyhow?

11 MR. GARDELL: Yes.

12 It would benefit all of us from that point of view.  
13 I think if they remain separate organizations which they pro-  
14 bably will do, because I don't think CHP is going to lose its  
15 identity and we aren't either at this point, and they aren't  
16 coming up with any single agency for funding the two programs,  
17 should we come to any disagreement or any impasse it seems to  
18 me we could revert rather easily.

19 I think this is easier than trying to force them into  
20 two separate and distinct organizations which they are not at  
21 this point in time.

22 MR. MARGULIES: We have had the same sense of  
23 uneasiness about this that you have expressed, but if there is  
24 to be any place in which this kind of arrangement is to be  
25 tested, that is a good one.

sw4

1 I think the best we can say is that it will be  
2 watched much more closely than any other arrangement. We have  
3 spent a lot of time already with them on the way they are doing  
4 things trying to make certain that the two programs are pre-  
5 served separately, function together, worry about the grant  
6 distribution, and it is about the best kind of test case we  
7 have.

8 The arrangement which Jerry has described is sort of  
9 an accommodation rather than anything that we are agreeable  
10 about.

11 But, it looks like a worthy try.

12 DR. BRENNAN: I am not precisely speaking in  
13 opposition to this, but the concerns I have are related on the  
14 one hand to visibility of program results and where credit falls  
15 falls for them.

16 I know that actually the two programs are funded  
17 separately by Congressional action and that when people go  
18 before the Congress to ask for new funds that they have to be  
19 able to list down the accomplishments of the particular group  
20 that they are asking support for and this can get sticky and you  
21 need visibility, you need an RMP constituency as such in order  
22 to maintain RMP funding.

23 The other thing is that there is -- while the pro-  
24 gram areas are certainly very much overlapping, there are tow  
25 very much overlapping sets and some would even thing that they

sw5

1 are very nearly identical sets, I think that from the stand-  
2 pont of genesis, the CHP program is looked upon and seen within  
3 the regions and states as an extension and elaboration of the  
4 state health department system, the state health officers and  
5 governors office and what you might call the official machinery  
6 of the state in an attempt to rationalize the medical system.

7           On the other hand, the regional medical programs are  
8 looked at -- looked at as something free from that and in a  
9 strong way kinds of indigenous things belonging to the people  
10 who are medical consumers, the medical providers, and that what-  
11 ever enmities or resentments and so forth might have built up  
12 over the state health department in its relationships are not  
13 a burden for our enmity.

14           RMP is imposed on an areas and CHP is something  
15 imposed from outside. I would sincerly hope this would not be  
16 a precedent for going alone with some administrative gravity  
17 here that we feel developing, but that it would be an experiment  
18 and that it would not lead us administratively or in the  
19 regions and fields to work postively toward this kind of thing  
20 in a general way until we see how this one works out.

21           If there is indeed a flow in that direction, my  
22 hope would be that our policy would be to move with it in a  
23 testing way, but certainly not to start getting right behind the  
24 acceleration of it until we were sure as to how these experi-  
25 ments came out.

sw6

1 MR. GARDELL: I think there is not too much fear  
2 from that. Although I have not done a study I don't know at  
3 the moment of any other agencies whose boundaries are the same  
4 as it happens to be in these.

5 This just happens to be one. It just happens to  
6 work that way.

7 I can also just share with you what discussion was  
8 going on in the work group of the administrators office and  
9 also with departmental reputation on that group that wherever  
10 the legislative authorities are restrictive in this area, I  
11 think there is going to be a move for liberalizing it so we  
12 can move forward to do more of this kind of thing at the whim  
13 of the secretary or the administrator or whoever.

14 It might be -- I think it is a fact of life coming  
15 down the pike.

16 DR. PAHL: Thank you.

17 DR. SCHREINER: Does this overlap constitute any  
18 sort of record?

19 DR. KOMAROFF: They are random. When you get into  
20 the issue, though, of attendance figures, it looks like the  
21 people who regularly attend the larger advisory groups are  
22 pretty much the same people, but there are more "consumer  
23 representatives" on the consuerm representative board.

24 DR. PAHL: Further discussion?

e 4

25

25

#5  
arl

1 DR. BRENNAN: Yes. There is another issue raised  
2 by you and that is the question of whether there is an  
3 administrative or legally required on council position  
4 that has been taken that separates the RAG from -- or  
5 that makes it impossible for the RAG to function as its own  
6 physical agent as the part of a corporation. I don't  
7 see exactly what there is about a RAG that makes it  
8 ineligible to carry the public trust in these things, but  
9 I understand that last fall at one of our conferences in  
10 Memphis or some such place, St. Louis, I don't know, that  
11 in general -- a general directive was given out that the  
12 RAGs shouldn't be the fiscal agent and that they should  
13 in some way or other refer or have associated with them an  
14 independent fiscal agent, preferably one of their own,  
15 one of the things we have been trying to do for a long time  
16 is free these programs from excessive domination by the  
17 universities and in the past that's been made difficult  
18 because the universities were the fiscal agent.

19 Now what is the position, I would like to know  
20 what the position is where -- what its origin is that says  
21 that the RAG cannot function as its own part of the records  
22 of another corporation.

23 DR. PAHL: Let me try my hand at it. It is my  
24 understanding there is no policy on general council opinion  
25 which would prohibit a board of directors of a not-for-profit

ar2

1 corporation from serving as the RAG provided that that  
2 board has the appropriate composition which is called  
3 for in the regional advisory group and represents the region.

4 There is a general council opinion, I don't  
5 remember the date right now, which states that employees  
6 of a grantee organization may not serve as the regional  
7 advisory group to the extent that they would dominate such  
8 regional advisory group.

9 I believe the general council opinion in that  
10 sense reads something that there shall be no more than  
11 minimal representation of employees of a grantee organization  
12 on the RAG.

13 MR. GARDELL: That's right. Not to exceed 50  
14 percent is what we have been saying.

15 DR. PAHL: Does that help?

16 DR. BRENNAN: In other words, the deans of  
17 several medical schools, or chiefs of department of medicine,  
18 head of the hospital is getting some funding, all of those  
19 people would have to be taken into consideration in this  
20 50 percent? Then I suppose that in order to make sure that  
21 there's no doubt about this ratio and the rest, that what  
22 you are really saying is that you -- the safest thing to  
23 do is to take it out of the RAG, given the fact that the  
24 RAG oftentimes is composed in large part of people who  
25 are affiliated with grantee organizations.

ar3

1           Then you would like to have a board of directors  
2 about which no such allegation could be made under any  
3 circumstances, right?

4           DR. PAHL: That's correct.

5           DR. BRENNAN: Now the problem is, here, what is  
6 going to be the relationship of this board of directors to  
7 the RAG itself and will it not become a super RAG? You  
8 know, where the money is, that's where --

9           DR. MARGULIES: I can't remember whether you were  
10 here yesterday when the council acted on the description  
11 of the relationships between the grantee and the regional  
12 advisory group, but I think that it covered that issue very  
13 explicitly.

14           The responsibility of the grantee is to manage  
15 the funds and be responsible for those administrative  
16 functions necessary in the regional medical program, the  
17 employment of the coordinator, affirmation of the appoint-  
18 ment of the chairman by the regional advisory group,  
19 setting up of benefits, retirement, and so forth.

20           But program policy, final decision on program  
21 directions and on the approval of a request for grants  
22 forwarded to RMPs, that authority is with the regional  
23 advisory group and cannot be interfered with by the grantee.

24           The only time that the grantee would get involved  
25 in it would be when the regional advisory group is attempting

ar4

1 to do something which falls outside the law enabling the  
2 regional medical program to function, in which case they  
3 would get in touch with us.

4 But if it is a matter of program preference, the  
5 grantee is not involved in accepting as there may be members  
6 on the regional advisory group who have voting privileges.

7 So far as Nassau-Suffolk is concerned, I think  
8 you could build an argument that they could in fact be  
9 responsible for the grantee functions in the regional  
10 advisory group on a technical basis, but I can't find any  
11 good reason from the administrative management point of  
12 view why that would be preferable.

13 It would be clearly better to have a separate  
14 administrative body which is serving the appropriate func-  
15 tions of receiving funds and being responsible for them.  
16 There has to be some kind of interplay between the grantee  
17 and the regional advisory group.

18 When it is a university, and the grant-- and  
19 if it is a grantee -- finds a regional advisory group doing  
20 things which it cannot accept, which it thinks is against  
21 the public policy, then its only choice is to express that  
22 view independently and if the regional advisory group is  
23 insistent in moving it a way that the grantee doesn't like,  
24 then the grantee would have to withdraw <sup>at</sup> his grantee.

ar5

1 in one particular visit that I am familiar with, and  
2 site-visited a couple of times, a terrible conflict because  
3 of -- one of the things which the board of directors has  
4 given as a prerogative here is approving the chairmanship --  
5 not the chairmanship, but the director chairman. They  
6 hire him.

7 Now when you get a situation which a -- the board  
8 of directors doesn't want to go along with the regional  
9 advisory group opinion, who ought to be coordinator, you  
10 are in trouble. And I don't know whether it -- do you  
11 anticipate that the regional advisory groups will be  
12 creating the directors of the grantee institution by  
13 election to it so that the grantee agency, nonprofit  
14 agency, created to receive the funds and to carry  
15 surveillance over them, is derived by a vote or is constituted  
16 by the RAG?

17 DR. MARGULIES: When there's a private nonprofit  
18 corporation, there are a variety of ways in which the board  
19 is set up to handle the fiscal responsibilities, but that  
20 is certainly one possibility.

21 Having established it, however, the regional  
22 advisory group has no control over the fiscal management  
23 and the grantee has no control over programmatic matters  
24 which come from the regional advisory group.

25 DR. BRENNAN: The problem where the conflict

ar6

1 comes is precisely in the manner the board did it.  
2 Probably the most important thing you can do in making a  
3 decision about what policy you are going to have is to  
4 choose the man who is going to generate, in fact, the main  
5 body of suggestions for the regional advisory group to work on.

6 DR. SCHREINER: Under the new guidelines, he's  
7 nominated by the RAG and selected by the grantee.

8 DR. MARGULIES: That is in the regulation which  
9 was passed yesterday. And if they can't agree, then  
10 obviously they are going to have to persist until they do  
11 agree. For it to be unacceptable to one or the other would  
12 generally be unacceptable.

13 On one side this man is available for a whale  
14 of a lot of public money, and the grantee is the culpable  
15 one if things go wrong.

16 On the other hand, he is responsible for  
17 effective programmatic development in the region's interest.  
18 He has to be acceptable to both.

19 Up to the present time there have been only modest  
20 kinds of difficulties. This is a fairly characteristic  
21 kind of university research committee problem in which there  
22 has to be found a happy medium. I think the process of  
23 even searching for them has been illuminating in many  
24 circumstances. It has not created a problem for the most part.

25 DR. SCHREINER: Mike brings up a good point,

ar7

1     though, on the shadow of the board.     Do we have directives  
2     or standards about how many directors there should be on a  
3     grantee board?

4                     DR. MARGULIES:    On grantee boards?

5                     DR. SCHREINER:    Yes.

CR6500

E6-ter-1

1 DR. MARGULIES: No.

2 DR. SCHREINER: That might be a way of handling it.

3 I can see absolutely no justification for having more than a  
4 small Board of Trustees to handle the fiscal problems.

5 If you only have a small Board of Trustees, then  
6 they do not resemble a community organization. The problem  
7 comes if you have a big shadow of a huge Board of Directors  
8 over the RAG.

9 DR. MARGULIES: George, you can get into interesting  
10 complications. If you are talking about, say a state university  
11 or a large private university, which is the grantee, then  
12 the definition of what makes up the grantee body becomes very  
13 uncertain. You could say it is the Board of Trustees or you  
14 could say it is the Board of Overseers, or you could say it is  
15 a small group of people actually dealing within an administra-  
16 tive sense.

17 If you start trying to define that, then you would  
18 define the size of a grantee organization which is serving  
19 many grantee functions. Private foundation for example, may  
20 have large boards which are the grantee body but they may be  
21 handling ten times as much in funds.

22 Dr. Schreiner: If they are identified with an out-  
23 side body, I do not think that is the problem. It is where you  
24 have a creative thing that does nothing but this. Then you have  
25 the problem.

1 DR. MARGULIES: Yes. I think it should be of  
2 reasonable size and so far we have not had anything proposed  
3 which is not of reasonable size.

4 DR. BRENNAN: Well, could I ask a specific question  
5 that might help clear my own mind about this? Would it be  
6 feasible or acceptable for a regional advisory group to  
7 nominate and elect to a set of staggered terms, six or seven  
8 men, to constitute the Board of Directors of their nonprofit  
9 grantee corporation and to be the electing body for that board  
10 if we want to call it of the nonprofit corporation?

11 Would this be acceptable?

12 DR. MARGULIES: I think to initiate it, something  
13 of that kind would have to be done. But, then I think it should  
14 operate on a separate basis thereafter just as the RAG should.

15 DR. BRENNAN: Then you could leave it from then on  
16 the nonprofit grantee organization board should elect its own  
17 membership?

18 DR. MARGULIES: Just as the regional advisory group  
19 is originally appointed by the grantee and thereafter should  
20 be self-perpetuating.

21 DR. BRENNAN: It seems to me to be an undue complex-  
22 ity, and a disturbance of the unanimity that there ought to  
23 be -- I do think there is no reason why a regional advisory group  
24 could not be touched with the business of electing the Board  
25 of Directors for the corporation continuously.

1 DR. KOMAROFF: It seems to me as we went through the  
2 guidelines yesterday, and the problems that lay behind developing  
3 them, there is a legacy, a feeling about the grantee that  
4 derives from NIH, and other places. It does not quite apply  
5 to a community representative board in RMP.

6 It ought to be differences in conflicts among that  
7 board. To add a separate organization with which that board  
8 might come into conflict only complicates it. When you could  
9 set up a nonprofit grantee that was representative of the  
10 region, it seems to simplify a lot of things.

11 MR. GARDELL: It seems to me one of the things you  
12 have to try to guard against is an organization advising itself  
13 on what it is going to do.

14 That, I do not think is the intent of the law. I  
15 think the law wants us to have a body representative of the  
16 region for the needs within that region, advising the organ-  
17 ization itself.

18 From a program point of view, I think if we go any  
19 other route, we are going to run into a series of problems  
20 organizationally within our own department, because we got what  
21 we got here. I think it was really a very nice compromise, in  
22 working it out with them.

23 They would have liked to have seen more responsibility  
24 placed on the grantee whereas we are trying to give the RAG  
25 more freedom to programmatically represent the needs of the

1 region. I think we have done it very well, but if we go any  
2 further, we are going to have one or the other, and I do not  
3 know which way we will go.

4 For instance, representation on the RAG, we say a  
5 minimal representation from the grantee. Sometimes, that  
6 representations could be in the form of one person if he were  
7 very individual, or for instance, as we have had on occasion,  
8 or two, where the President of the Board is also the Chairman  
9 of the RAG, but he is advising himself in effect, and if he were  
10 a very strong person, there is not too much objectivity.

11 It could have some detrimental effect upon the  
12 program.

13 DR. MARGULIES: I do not want to prolong this too  
14 much. We are running along time. I just wanted to make one  
15 point. That is that the problem of having a regional advisory  
16 group function fully, and effectively, dealing with program-  
17 matic issues, is a great one, and although one might find  
18 a rationalization for having them also take on all the prob-  
19 lems of administration, of dealing with people like Gardell,  
20 over the receipt of funds, keeping track of the rules and  
21 regulations under which HEW allows its funds to be carried out,  
22 taking a look at retirement benefits, at personnel criteria,  
23 etc. , etc.; is to divert their energy in directions that would  
24 interfere seriously with their function.

For the most part, the kind of energy required for

1 a regional advisory group is of a different kind. It is con-  
 2 ceivable they could perform both functions but I think it would  
 3 likely lead to less emphatic results.

4 DR. BRENNAN: The way they have handled this in the  
 5 past is to create an Executive Committee, and a Finance Com-  
 6 mittee, and it is no more hard than that.

7 DR. KOMAROFF: I would like to move approval of the  
 8 Review Committee's recommendation on Nassau-Suffolk for roughly  
 9 1.5 million, and approve the plan of joint funding of RMP  
 10 and CHP provided that both advisory groups vote in favor of  
 that, and defer a recommendation on the regional project.

*motion second*

12 DR. PAHL: Is there a second to the motion?

13 MRS. MORGAN: I second.

14 DR. MC PHEDRAN: I second.

15 DR. MARGULIES: Seconded by Dr. McPhedran.

16 Further discussion or comments on the kidney propo-  
 17 sal that should be made?

18 DR. HINMAN: There were two kidney proposals sub-  
 19 mitted by Nassau-Suffolk. The first was to begin a regional  
 20 owner-donor program that they planned to coordinate with  
 21 Metropolitan New York, and New Jersey, and they advised us they  
 22 will be coming in with a 910 application.

23 It is for \$27,060 for the first year to develop the  
 24 registry, the surgeon, and supporting staff to make it go.

25 The local review and the staff review recommended approval of

1 this project and is included in the \$1,099,000 that Dr. Komaroff  
2 moved on.

3 The second program is a home dialysis training pro-  
4 gram. It was stated that they wanted to develop 50 modular,  
5 single-concept lessons for training patients for home dialysis.  
6 Our staff has been in discussion with the program staff of  
7 Nassau-Suffolk for over a year on this.

8 They have been given continued advise about the  
9 efficacy of programs developed in such places as the Northwest  
10 Kidney Center, and they have not taken that advise. This  
11 application was to write a contract with an individual who was  
12 going to rediscover the wheel from scratch.

13 It was our recommendation this be disapproved with  
14 advise to the region they go back and read their correspon-  
15 dence over the past year, and we will continue to work with them  
16 to improve the home dialysis training in the area.

17 DR. MERRILL: I would just like to add a word to  
18 that. I certainly agree with what Ed has said. However, if yo  
19 you look at the recommendations it points out that the need  
20 for expanding existing dialysis facilities applied in general  
21 objective number one requires additional study. General  
22 objective number one states they want to increase the access-  
23 ability to primary ambulatory health care services, especially  
24 for specific population groups, such as the poor, the near poor,  
25 the elderly, disabled, migrant, prisoners, etc.

ter-7

1                   That is exactly the kinds of group that is not  
2 suitable for home dialysis.

3                   At the risk of being a little chauvinistic, if you  
4 want to experiment with that type of group, <sup>*Seattle*</sup> Seattle is not  
5 the place to get it. I respectfully submit there are centers  
6 to train people for home dialysis with a population more  
7 applicable to the description in Number one. Perhaps, that is  
8 what you mean by the additional list previously recommended  
9 by the staff.

End #6

10                   I certainly would concur with the recommendation.

CR-6500  
#7  
nb-1

1 DR. SCHREINER: I think that's a good generalization  
2 to remember that there are well developed materials. John  
3 has a book, we have a looselief book we have developed over a  
4 three or four year period. And Seattle Kidney Center has a  
5 learning tape system. With a very small amount of money these  
6 can be personalized to individual places and you can put in  
7 those additions that you need by opening the rings or by  
8 cutting the tapes up and inserting a litting segment for your  
9 technician or your nurse and making it personalized.

10 I think this would be a much better way to go than  
11 having everybody keep funding things from scratch.

12 DR. PAHL: Thank you.

13 Is there further discussion on the Nassau-Suffolk  
14 application?

15 If not, all in favor of the motion, please say aye.

16 (Chorus of ayes.)

17 DR. PAHL: Opposed?

18 (No response.)

19 DR. PAHL: Motion carried.

20 With your indulgence we would like to have Dr. Cannon  
21 present the South Dakota application which perhaps won't require  
22 quite as lengthy discussion and we could then break for coffee  
23 and following coffee we would like to take up the Missouri  
24 application.

25 DR. CANNON: South Dakota, this lady tried to get

nb-2

1 in with an unhappy marriage, and was finally divorced. I think  
2 this is the first divorce proceeding that council has encountered  
3 and now that the divorce is final, she is flying her own kite  
4 and apparently doing a very good job of it.

5 She is on blank status at the present time with an  
6 application to become operational.

7 South Dakota is largely a rural area with a gradual  
8 diminution of physicians who have served the rural area by  
9 moving into the few urban centers that it has.

10 It has about 660,000 people and the minority group  
11 in South Dakota are Indians, 35,000, I believe, Indians.

12 The application at the present time is for -- we  
13 figured out a funding for the first year. The application for  
14 this time is for an amount of 400,000 plus dollars -- 424,682  
15 which has been passed on by all our review groups and agreed  
16 that this is appropriate funding and I would so recommend that  
17 the council give a favorable vote on that amount.

18 I would like to call your attention to the fact that  
19 this state is in need of two programs and that is the DMS and  
20 the AHEC and that they have applications presently in for  
21 funding; and if you -- I won't go into details but the lack of  
22 transportation for acute emergency and many other problems  
23 which prompt me to recommend that this council expedite the  
24 funding of those two programs and encourage South Dakota to  
25 become operational.

nb-3

1 If they can't be funded on those two programs before  
2 they get operational, then we will have to stand on protocol.

3 My recommendation is for -- to fulfill the request  
4 of 424,662 and to expedite the funding of the EMS, HEC program.

5 DR. PAHL: Thank you very much.

6 Mr. O'Flaherty, do you have some comments?

7 MR. O'FLAHERTY: Yes, sir.

8 Only to say that the reviewing bodies that have  
9 considered the body to date feels that the body has progressed  
10 from a state of infancy, has required a good director, an  
11 outstanding regional advisory group chairman. The RAG is very  
12 much involved in the program. As Dr. Cannon said they do have  
13 need for these supplemental type activities. The region  
14 has moved considerably in terms of delineating its needs and  
15 involving appropriate groups in the determination of what should  
16 be the mission of RMP in South Dakota.

17 DR. CANNON: As an additional comment it should be  
18 made that the RAG is the advisory council for the CHP. They  
19 are one and the same. Its composition is 51 percent consumers  
20 at the present time because of a limited number of people  
21 available to serve in the capacity.

22 It was thought both by the site visitors and the  
23 reviewers that this was acceptable and a grantee is the Univer-  
24 sity of South Dakota, supposedly, medical units. It is a two  
25 year medical school.

nb-4

1 This two year medical school wants to become a four  
2 year medical school but it is going to have difficulty making  
3 that grade. I think it will but it won't be in the near  
4 future. Their real deficit is in physicians prior input. Because  
5 the physicians, there are very few who are board certified,  
6 the school does not have sufficient clinical faculty available  
7 in the area to select the faculty to serve clinical years and  
8 I think this is where the difficulty is going to come down the  
9 line.

10 DR. PAHL: Thank you very much, Dr. Cannon.

11 Mrs. Silsby just handed us a note from Dr. Roth  
12 who was also reviewer on this application. Perhaps Dr. Margulies  
13 might like to read it for the record.

14 DR. MARGULIES: I think I am the appropriate one to  
15 read it because I am from South Dakota. He is not really from  
16 South Dakota, he just claims it.

17 (Laughter.)

18 DR. MARGULIES: In effect, I was just out there to  
19 give their commencement address. This is a memo from Dr. Roth.

20 I enjoy the opportunity to serve as backup reviewer  
21 for the South Dakota application and I would like the record  
22 to show that I have chosen to adopt the position that there  
23 is no conflict of interest in the fact that I have a Dakota  
24 Indian tribal name Tankanosta Koshita (sp.) which means young  
25 boy to discover rock pile.

nb-5

1 It relates to my first gallbladder excision, quite  
2 successful I might add. The name was bestowed upon my by the  
3 patient and her family, notables from the Rosebud Indian  
4 Reservation.

5 Perhaps this will merely serve as testimony to my  
6 cognizance of minority representation in an area such as this.  
7 Within this application there are several items of note and  
8 of significance for RMP in my estimation.

9 It first relates to the documentation of the decrease  
10 in the number of physicians, MD and DO alike from the smaller  
11 cities of South Dakota. There is here a striking study of a  
12 relatively poor culture, the factors that have brought this  
13 about, and the opportunity to develop efforts on how to best  
14 plan for reversing this physician flow.

15 A second element of importance is to catch clearly  
16 the message that HMO development does not strike the region as  
17 being the proper mission for RMP but the support of emergency  
18 medical services does in the development of an area of health  
19 education center does. This is a relatively simple straight  
20 forward application and I would not belabor the issue further.

21 I would support approval of the application for full  
22 funding in the amount requested, NB. South Dakota, although  
23 poor in resources is also one of the healthiest places in the  
24 world to live which carries a message with respect to the  
25 elements necessary for the maintenance of good health. It

1 not all or even possible in the physicians population ratio.

nb-6

2 Signed RRR, he did not sign it with his Indian  
3 name.

4 (Laughter.)

5 DR. PAHL: There is a motion on the table.

6 Second?

7 MR. MILLIKEN: Second.

8 DR. PAHL: All in favor of the motion say aye.

9 (Chorus of, ayes.)

10 DR. PAHL: Opposed?

11 (No response.)

12 DR. PAHL: Motion carried.

13 Before breaking for coffee, perhaps it would be of  
14 interest to the council to know that Dr. Margulies, in addition  
15 to having visited there, received an honorary degree from the  
16 university which also came in a lovely red binder as does your  
17 book of applications, but I think he had more pleasure out of  
18 the other binder.

19 (Applause.)

20 DR. PAHL: Let's try to return from coffee in fifteen  
21 minutes so we can proceed with our discussion of the Missouri  
22 application.

End #7

23 (Recess.)  
24  
25

#8  
arl

1 DR. PAHL: May we come to order, please.

2 Dr. McPhedran, may we please get started on  
3 the Missouri application with Dr. Komaroff as back-up  
4 reviewer and Donna Houseal at the table here as staff.

5 DR. MC PHEDRAN: We are going to have several  
6 participants in this because I have conferred with Miss  
7 Houseal and also Dr. Komaroff ahead of time, and he kindly  
8 offered to do a part of the review. We will come to that in  
9 just a minute. This is a -- an anniversary -- this is a  
10 second year of a triannual award from Missouri, the triannual  
11 award has now just about completed its first year, and it  
12 comes before the council for several reasons; for one,  
13 that increased funds are requested; for another, that  
14 the review committee made recommendations actually to reduce  
15 the committed level and because there's another technical  
16 site visit for the computer project in Missouri which gave a  
17 very unfavorable report, so there are all kinds of reasons  
18 why this has to be discussed at this council meeting.

19 The request is difficult to describe because  
20 there are different requests, that is with different funding  
21 levels. It is a request for either one of two sums: the  
22 committed level of about 1.825 million or a preferred level  
23 called Plan B, which is \$4.46 million in direct costs.

24 The council-approved level is 2.012, and the  
25 actual 12 months direct cost for this year, that is this

ar2

1 year ending now, the first of the triannual years, was  
2 1.947 million.

3 Now the -- I will say at the beginning that  
4 all agree, no Plan B, that is \$4.46 million. At least all --  
5 that is the staff anniversary review committee and ourselves  
6 and the last year we did not agree to a developmental component  
7 although we conferred triannual status on the region, and  
8 we are all in agreement that development component should  
9 not be given this year either.

10 The questions about the change in funding level  
11 are mainly -- they mainly turn on whether one wishes to  
12 continue the automated patient history acquisition system  
13 and the automated <sup>physicians</sup> ~~positions~~ assistant program in Salem,  
14 Missouri, and these are matters that we discussed at some  
15 length in the -- the last time council took action on this,  
16 a little over a year ago; and as I say, there has been another  
17 site visit on these projects which the report -- the report  
18 which I have reviewed and Dr. Komaroff also reviewed. I  
19 asked him if he would do this because he visited the site  
20 in Salem when we made a site visit there, March of 1971,  
21 and so I would like to deal with Dr. Komaroff and ask him  
22 to talk about this now, and talk about the site visit report.

23 DR. KOMAROFF: For the benefit of the new  
24 council members, the Missouri region was one of the very  
25 early regions funded for both planning and operations; and

ar3

1 from the beginning they placed this high emphasis on  
2 computers and advanced technology in medicine.

3 They began by supporting eight individual  
4 computer-related projects, and they have now pared those  
5 down to two individual projects and one joint automated  
6 position assistant project, which really combines in one  
7 rural practice setting five of the previous activities.

8 Over the last five years we have supported the  
9 computer-related activities to about the tune of \$7-1/2  
10 million. Last year council recommended one additional year  
11 of funding for these activities at a reduced level of support  
12 and then at mid-year the region came through council request-  
13 ing supplemental funding for this automated position assistant  
14 project in the rural practitioner's office.

15 They had, by mid-year, spent all of the funds  
16 that had been awarded to them and were requesting supple-  
17 mental support from us and the council felt that there was  
18 inadequate justification for that supplement and refused  
19 to allow it as a grant.

20 Subsequently, however, that supplement -- those  
21 supplementary funds were made available through contract.  
22 A site visit was made to the region this April, headed by  
23 Octo Barnett from MGH, and on the site visit with Robert  
24 Reickert from Computer Specialists from Kaiser, John Rockhart,  
25 associate professor of the Sloan School at MIT, who is also

ar4

1 a computer management expert and Robert Robertson from UCLA,  
2 plus Charles Morrison, a practicing rural doctor from Maine,  
3 who is experienced in the Navy and his current involvement  
4 with several computers in rural practice projects not  
5 funded by RMP uniquely qualified him to look at the complica-  
6 tions of this to a real practicing doctor.

7 The site visitors, as had been all of the previous  
8 technical site visits that we had sponsored, were very  
9 critical in their remarks. They found, and I think this  
10 is something that we will emphasize here, that the goals  
11 themselves were admirable and that RMP ought to be in the  
12 business of this kind of innovative and imaginative  
13 approach to the rural health care problem, but they found  
14 that the actual accomplishments of these activities were  
15 disappointing.

16 The EKG project they report as very costly with  
17 a diminishing number of users rather than an increasing  
18 number, and with a computer EKG interpretation which was  
19 erroneous 50 percent of the time, practically incapable of  
20 handling erythmia.

21 The biomedical project, which is designed to  
22 be an instant information retrieval for the isolated rural  
23 practitioner, a limited market survey had not yielded to  
24 the site visitors' benefit any demonstration for need of  
25 users, prospective users in the region, and they report that

1 "the project director had little grasp of the indexing and  
2 maintenance problem."

3 The main activity in the area is the automated  
4 physicians' assistant project which puts together a  
5 computer generated general medical history and the EKG,  
6 computer diagnostic tool, radiology coding system, and  
7 two other activities that are less important.

8 The site visitors found that the principal  
9 investigator had "little experience and little medical  
10 leadership," and they found that the project components  
11 were applicable primarily to new patients in Dr. Baskin's  
12 practice which constitute only 5 percent of the patients he  
13 sees each week.

14 They found further that even with the new patients  
15 entering his practice, the system was very little utilized.  
16 For instance, only one patient history, general medical  
17 history, was administered every four days on an average.  
18 This is a physician who sees 120 patients a week. They  
19 found that there were "no evidence of any corrections of  
20 errors which were being entered into the system" with regard  
21 to physical findings or laboratory findings, and there was  
22 "little effort to organize the information in a medically  
23 logical manner and that the technological decisions were  
24 extraordinarily expensive."

25 They came to the conclusion that there is every

ar6

1 reason to expect costs to remain high and volume low  
2 with serious doubt about the utility of information provided  
3 for improving management of medical care delivering in  
4 rural areas and they recommend that none of these three  
5 projects which are currently funded at \$400,000 which  
6 request by the lower plan describing 200,000, and by the  
7 larger plan \$1 million for the next year, they recommend  
8 that none of them be funded at all and the review committee  
9 strongly concurred in that recommendation.

10 DR. MC PHEDRAN: All concurred in that recommenda-  
11 tion. Staff review panel --

12 DR. PAHL: Dr. McPhedran, could you speak a little  
13 bit more into the microphone?

14 DR. MC PHEDRAN: Sure. All concurred in this  
15 recommendation that those projects should no longer be  
16 supported. The difference of opinion was whether the money,  
17 so to speak, saved by not investing in them could be  
18 rebudgeted by the region for use were to support other  
19 projects and other activities and here the review committee  
20 took the -- a harsher line and felt that the committed levels  
21 should be changed downward to \$1.6 million, and I subscribe  
22 to this view because the rest of the program, it seems to  
23 me, is really not -- it just isn't enough of a regional  
24 medical program really to warrant the confidence that that  
25 would imply.

ar7

1           It is a collection of projects, 17 continuing  
2 within approved period support, two requesting support  
3 beyond the approved period of support, five approved and not  
4 previously funded, and it is extremely difficult now,  
5 looking at the material now, as it was in March, 1971,  
6 to get a picture of a program for the whole region.

7           It differs very sharply from other regions  
8 that I have visited in this respect. I have the same feeling  
9 now that we all had in March, 1971. It may be that the  
10 program is administered capably, but there is just very little  
11 evidence that there is real program direction, assessment  
12 of needs of the region from the top, and a direction of the  
13 program to address those needs. So that -- and this is not  
14 because of lack of staffing, by the way. This is an  
15 enormous program staff, and the program has had very large  
16 support in the past.

17           The review committee made a further recommendation  
18 which I do not subscribe to. They recommended that triannual  
19 status be revoked so that I am proposing the review  
20 committee's new level of \$1.625 million with the direction  
21 that no money be used for further support of these computer  
22 projects that we have described, that triannual status not be  
23 revoked, but that another site visit next spring would be in  
24 order to see what changes in program direction may be in the  
25 making.

1 For one thing, we might hope to see that some time  
2 related objectives have been adopted. This was specifically  
3 recommended by the site visit in March, 1971, and this message  
4 was carried to the region again in the advice letter and only  
5 recently has a goals and objectives committee been appointed by  
6 the advisory council.

7 I am sorry, this is a -- perhaps a little digression,  
8 but I think that some other difficulties with the region need  
9 to be cited.

10 The advisory council is a very small group numbering  
11 12, and really has not been representative of the elements that  
12 we feel should be on the advisory council. For example, there  
13 is no comprehensive health planning representative, no  
14 Veterans Administration representative, and in the past there  
15 has been no minority representative, although I understand from  
16 Ms. Houseal that now there is at least one black member on  
17 this advisory council; and the -- furthermore, the other supporting  
18 committees, standing committees in the regional medical program,  
19 the liaison committee which is supposed to represent public  
20 interests, has had poor minority representative and technical --  
21 the technical project review body which also supports this  
22 regional advisory council is no better in these respects.

23 So that because of what appears to be poor program  
24 direction really -- an unrepresentative regional advisory  
25 group, and we feel for these several reasons that we do not have

✓✓✓

mm2

1 the confidence to recommend that they rebudget the money that  
 2 we want them to save: That is not to expend on these computer  
 3 assisted projects and this accounts for the recommendation  
 4 which I will reiterate: \$1.625 million for the next year, for  
 5 the site visit recommended next spring to see what changes in  
 6 program direction may take place.

7 That is a motion.

8 DR. KOMAROFF: Second.

9 DR. PAHL: There has been a motion made and  
 10 seconded. Is there further discussion?

11 DR. KOMAROFF: I think it is only fair to make it  
 12 explicit before a vote is taken that what we are all  
 13 wondering about, is that there is unusual, extraordinary  
 14 interest in the future of the computer related activities within  
 15 the administration and any action we take on those activities  
 16 will, you know, we have to consider in that light.

17 DR. PAHL: Miss Houseal, do you have any comments  
 18 to add?

19 MS. HOUSEAL: There are two comments I would like  
 20 to make. One is with regard to the computer activities that  
 21 the same application was submitted to the national center for  
 22 R&D. They participated in a site visit, it was reviewed, and  
 23 turned down by their study section because of the same technical  
 24 reasons, although they are in favor of supporting far out kinds  
 of activities. They felt it was technically not of enough

*Motion  
 ms. Houseal  
 second  
 Komaroff*

mm3

1 merit to support.

2           The second thing I would like to ask the council, the  
3 review committee suggested a site visit right after the meeting  
4 of this council in order to let their region know in no uncer-  
5 tain terms what your concerns are.

6           I am concerned if the site visit is not held until  
7 next spring it will be another six months or a year until  
8 Missouri starts moving to change these.

9           I would hope the recommendation of a site visit  
10 would be moved up to possibly this summer.

11           DR. MC PHEDRAN: All right.

12           Then, if I may, I would amend my motion. That  
13 sounds -- makes good sense to me. I amend the motion to have the  
14 site visit scheduled earlier, I guess this summer would be the  
15 appropriate time.

16           DR. MARGULIES: I would like to underscore what  
17 Donna has just said.

18           The review committee made a particularly strong  
19 point of the fact that they felt the people in Missouri did not  
20 fully appreciate the level of concern of council, did not realize  
21 that they were acting because it was not a regional medical  
22 program meeting the kinds of standards that the council has set.

23           They have tended to believe, and Tony was trying to  
24 make a point of this and did, that this is evidence of the  
25 council's disinterest in advanced technology.

*Amended motion*

mm4

1 It is, in fact, as I understand it from the council,  
2 although you haven't had the vote from the presentation, I should  
3 say evidence of concern over doing that kind of thing which  
4 they have been attempting to do well rather than poorly, and  
5 conversely, concern over the fact that the Missouri Regional  
6 Medical Program has not regionalized, has not been responsive  
7 to the commission's statement, and has not designed a mechanism  
8 to serve the needs of the part of Missouri to which they are  
9 responsible.

10 Is that a correct interpretation?

11 DR. MC PHEDRAN: Yes.

12 DR. PAHL: This application has been discussed in some  
13 of the projects at earlier council meetings and perhaps some of  
14 the other members of the council might wish to add some comments  
15 at this time.

16 MRS. MARS: Well, if there is a weak coordinator and  
17 he is going to continue, how is it going to improve?

18 What hope is there of improvement?

19 Is there any chance of them getting another coordina-  
20 tor? Things are certainly just going to go on as they are, so  
21 to speak.

22 DR. MC PHEDRAN: You ask a very difficult question.

23 (Laughter.)

24 DR. PAHL: I would like to point out for the council  
25 that the review committee did struggle with the issue of triennial

mm5

1 status and made the recommendation which Dr. McPhedran  
2 referred to that triennial status be withdrawn and that this is  
3 a point which is not being accepted in the current motion on  
4 the floor.

5           Perhaps there should be some further discussion,  
6 even Dr. McPhedran by you, because I do believe the review  
7 committee spent some time with this new issue of withdrawal of  
8 a triennial status that has been made and in connection with  
9 that, I would point out that if the triennial status of the  
10 region is maintained, then under the council policy which was  
11 established at the last meeting, the level of funding -- I am  
12 sorry, the council-approved level for the next year would also  
13 be at the 1.6 million recommended level unless you specify  
14 otherwise.

15           DR. MARGULIES: I would like to add just one point  
16 to that before you respond, because one of the issues that the  
17 review committee was concerned with, and we have not been  
18 that explicit about it in council either, was the inviolability  
19 of triennial review.

20           They had the feeling, which is incorrect, that when  
21 a program has triennial approval, it is guaranteed to remain at  
22 a triennial approval level for the subsequent three years.

23           We made the point that this is subject to review  
24 regularly, and with that, they took the action that they took.

25           So, if your position is to sustain triennial review,

mm6

1 it would be important to differentiate it from any feeling that  
2 there is no way of altering that status, that it is a positive  
3 sort of recommendation on your part.

4 DR. MC PHEDRAN: Well, I would not see any reason --  
5 I would not see any way that we could predict now that the  
6 third year level would go above this suggested \$1.6 million  
7 unless something happened in the interval.

8 I spoke -- but I think I would be certainly open  
9 to consider some new evidence that things have changed.

10 DR. KOMAROFF: It seemed to me -- I agreed with  
11 Alex' recommendation there and it seemed to me we run a great  
12 risk in acting on this region, of appearing unduly punitive.

13 If you really talk about setting up a full-scale  
14 site visit in the future, you are effectively challenging their  
15 triennial guarantee. You are just not saying it in so many  
16 words. You accomplish the same kind of control and expression  
17 of concern to the region without appearing to have acted in a  
18 fit of pique.

#10-ter-1

1 MRS. WYCKOFF: Did they give the funding history  
2 of Missouri to the council this time, going back to the begin-  
3 ning and coming on down, with a picture of what has happend  
4 over the years? I think that is a very significant thing and  
5 one in which I would react according to that. Approximately,  
6 just --

7 DR. MARGULIES: Do you have that funding history of  
8 the Missouri RMP?

9 MS. HOUSEAL: I think I almost know it by heart.

10 DR. BRENNAN: It is in that big, black book you  
11 have.

12 MRS. WYCKOFF: I know it is.

13 MS. HOUSEAL: The funding level from the beginning  
14 of Missouri's operational program for its first year was 2.6,  
15 for the second year was 4.6.

16 These are direct costs. For the third year -- this  
17 is for a fifteen month period, 5.6. The analyzed level was  
18 5.1.

19 The fourth year was 5.8; and then following the  
20 site visit for this present year, the recommended level was  
21 1.8.

22 MRS. WYCKOFF: So, this is --

23 MS. HOUSEAL: It was cut in half last year and  
24 apparently, just has not had the effect.

MRS. WYCKOFF: Well, do you feel we would be giving

1 closer supervision by withdrawing the triennial status? That  
2 they would be better able to respond, say, to a community con-  
3 stituted and better imposed RAG?

4 DR. MARGULIES: Those are separate issues. For my  
5 own part, I think that the recommendations that have just been  
6 made are perfectly appropriate. It is largely a question of  
7 how clearly they receive the concerns of the council and the  
8 recommendations of reduced funding, and a special site visit  
9 are quite impressive as will be the record of the report which  
10 has been made here.

11 DR. MC PHEDRAN: The site visitors -- a special site  
12 visit -- we think from what we know about it before, there are  
13 some things which are laudable, and new, that are going on  
14 there, and there are one or two projects in the state, especially  
15 those in Kansas City, which are certainly in the right direction  
16 for regional medical program.

17 It is not that we cannot find any saving graces at  
18 all, it is just that I think this would help to emphasize the  
19 value that we find in those, and if we think them more impor-  
20 tant than the previous activities which we would like to see  
21 declining.

22 MS. HOUSEAL: Dr. McPhedran, I perhaps, have not been  
23 clear about the purpose of the site visit that the review  
24 committee recommended. The site visit proposed is not a full-  
25 scale, go out and get a lot of new information, because in fact,

1 they think there was a lot of new information to be gained.  
2 The purpose of it was to take <sup>a few</sup> new council members out, and to let  
3 Missouri know their displeasure with the region and ~~put them~~  
4 on notice of where they expected them to be.

5 DR. MC PHEDRAN: Okay.

6 DR. PAHL: As a point of information, prior to  
7 voting on the motion, I would like to point out that at yester-  
8 day's discussion of the governing principles and requirements  
9 for discretionary RMP funding and rebudgeting authority there  
10 is a difference stated now between regions on a triennial basis  
11 and those not on the triennial basis which may be of interest  
12 here and that is that those regions which are not approved for  
13 a triennial period, it is clearly stated that any new operational  
14 activity not generally covered by its program as approved by  
15 the council, must come in for approval.

16 In view of the history of the program, I think this  
17 point may have been in the Review Committee's mind at the time  
18 that their discussion took place. I am providing this for  
19 information for you, not to dissuade you from your position and  
20 recommendation that you have.

21 DR. KOMAROFF: Can we simply recommend that next year,  
22 at this time, council review the region again, so it can review  
23 it anyway without formally revoking triennial status?

24 DR. PAHL: You may do whatever you wish.

25 DR. MARGULIES: We will bring it in.

1 DR. PAHL: If there is no further discussion from  
2 council or staff, all those in favor of the motion, please  
3 say "aye."

4 (Chorus of Ayes.)

5 DR. PAHL: Opposed?

6 (No answer.)

7 DR. PAHL: Motion carried.

8 DR. MARGULIES: After this morning's discussion,  
9 Dr. Wilson brought up for your consideration, the idea of  
10 establishing a kind of special subcommittee and executive or  
11 program committee of the council.

12 I would like to talk with you about -- for a moment  
13 and perhaps as good a theme for doing it as any, is the special  
14 issue which I wanted to raise with the council.

15 This is a good time to do it. It has to do with  
16 one of the programs. It does affect where you live Dr. Watkins,  
17 but I think it is just as well that you are here for this because  
18 it is a rather broad issue, and perhaps, we may ask Burton  
19 Kline to embellish on the comments.

20 Briefly stated, it has to do with the status of  
21 Metropolitan New York RMP, which is in deep trouble. It has  
22 recently had a management assessment visit, which among other  
23 things pointed out the fact that it had a very complicated  
24 Board of Trustees, made up of the Deans of the medical schools  
25 of Metropolitan New York, which was fairly swamping the function

1 of the regional advisory group, that they were unable to  
2 maintain staff effectively.

3           Burton, where do we stand on staff arrangement there,  
4 right now? What was their top level and where are they going?

5           MR. KLINE: About a year ago, they had sixteen pro-  
6 fessional staff people. They currently have seven on board,  
7 and as of last Friday, three were seriously considering leaving  
8 the program. A fourth was contemplating it. Approximately  
9 50 percent of the seven remaining, are thinking of leaving.

10           DR. MARGULIES: In addition to that, the funds which  
11 are available to them are currently not being used effectively.  
12 There are promises being made, from what we are told, of the use  
13 of funds without going through either the regional advisory  
14 group, or the Board of Trustees. Very, highly uncertain  
15 status for the whole activity.

16           Recently, the management assessment visit which was  
17 reported back to them carefully, the Board of Trustees met to  
18 decide what they should do about the insistence that it conformed  
19 to RMP regulations and to the will of the council and I have  
20 not gotten a report back on that.

21           One of the questions was whether the Board of Trus-  
22 tees, made up of the Deans, wanted to bother with the RMP, if  
23 they could not manage it as they saw fit, or whether they  
24 wanted to challenge the whole concept.

25           Do we have an official report yet, on that meeting?

1 MR. KLINE: No. We do not have it yet, Dr.  
2 Margulies, but the letter certainly ought to arrive today.  
3 The courtesy copy arrives in New York City, yesterday. It should  
4 be in today.

5 DR. MARGULIES: I bring this up to the fact that  
6 this is a program in real difficulty. We are not going to  
7 solve it this morning but when special issues arise, like this,  
8 we will pursue it further, and give you additional information.

9 We have indicated in the past, any program on  
10 triennial status, or otherwise which we feel is doing extra-  
11 ordinarily well, or very poorly, or in some way is of unusual  
12 interest will be brought to your attention.

13 Without embellishing this, or trying to add to  
14 information which is more hearsay than fact, I would like to  
15 point out that there is a need in all likelihood, to have a  
16 group of people who are willing to set aside some time, prior  
17 to an upcoming meeting to consider special issues, to give us  
18 advice, and to be in a better position to communicate with the  
19 council when they meet than might otherwise be the case.

20 It is this kind of thing, and bigger, broader issues  
21 of the kind that occupied your attention earlier this morning  
22 that Dr. Wilson was addressing.

23 I would appreciate some response from you if you  
24 feel ready to give it about the propriety of establishing such  
25 a subunit of the council to operate between and prior to

ter-7

1 meetings.

2 MRS. WYCKOFF: This is similar to an Executive  
3 Committee?

4 DR. MARGULIES: It would be pretty much a definition  
5 of how you would want to do it. An Executive Committee,  
6 ordinarily is one which takes action in the absence of the  
7 body it represents, and any definite action could not be taken  
8 by the Executive Committee, unless you assigned it that function.

9 I do not believe it is for purposes of action that  
10 he was thinking so much, as it is purposes of better under-  
11 standing and better consolidation, and because you, as members  
12 of council, can more fully appreciate what the council needs  
13 to know, than can we, who meet with you occasionally.

14 You have a different community of interests than  
15 have we in meeting with you on these occasions.

16 DR. SCHREINER: I do not think it should be called  
17 an executive Committee. It should be either a special study  
18 committee, or an operations committee.

19 DR. MARGULIES: Do I have the impression that this  
20 is something you would look favorably on?

21 If so, the other question which I think is probably  
22 more difficult, is when should such a group meet. The idea  
23 of meeting just the night before has the advantage of conven-  
24 ience, but I do not know if the timing is quite right. One  
25 of the questions was the establishment of agenda items, or

1 review of agenda items and that clearly has to take place  
2 much earlier.

3 Do you have a feeling about when such a group should  
4 meet?

swl

1 MRS. MARS: How long ahead do you set up the agenda?

2 DR. MARGULIES: We develop the agend practically  
3 from the end of one council meeting to the next, but it gets  
4 solidly set somewhere four to six weeks, I would say, ahead of  
5 the time of the next meeting, and then we try to keep it as  
6 fluid as we can until it is time to send it out.

7 MRS. WYCKOFF: Is this a committee that would be  
8 used for emergencies like this New York situation? Is that  
9 what you mean?

10 MRS. MARS: No.

11 DR. MARGULIES: Not necessarily, but it would be a  
12 group which could, as much as possible, represent a likely  
13 consensus of coucil in -- when we are unable to get the council  
14 together to produce that consensus.

15 In other words, a voice for the coucil, a reading  
16 for us of what council judgment might be or what action they  
17 might want to take.

18 DR.MERRILL: I think if the agenda were made up  
19 several weeks ahead of time and the problems were succinctly  
20 pointed out by staff, it would give the members of the committee  
21 time to look it over, to ask the pertinent questions, get back  
22 the information, and then meet, let's say, the afternoon before  
23 and still have time, let's say, for a little feedback with  
24 staff.

I am not at all sure this thing couldn't be done by

sw2

1 that method and then finalized the day before the meeting,  
2 regular meeting.

3 DR. MARGULIES: Does that seem reasonable? It would  
4 certainly save time and everyone gets involved with quite a  
5 time commitment to this council.

6 DR. BRENNAN: I think in general if the agenda --  
7 with some explanatory -- or recapitulation -- be a brief one  
8 -- that they can get back to you with a question or a complaint  
9 and you can -- that will help you to see what is coming, help  
10 you to prepare yourselves for these things.

11 I think that would help.

12 And then I think that otherwise, having the meeting  
13 that afternoon would be practical.

14 DR. MARGULIES: Good, yes. I think an early  
15 tentative agenda could be very useful and we could do that  
16 easily.

17 MRS. MARS: Let us send in comments. It eliminates  
18 the necessity of a committee.

19 DR. MARGULIES: Or at least it would give a better  
20 base for a small group to act on.

21 DR. MERRILL: I do think it is a good idea to have  
22 everybody get it. But I do think there are some questions and  
23 answers that will be generated and required which can only be  
24 done by meeting personally with staff.

I think this probably could be done by a small group,

CR6500

#11-ter-1

folg SW2

1 not the entire council, by a small group meeting with staff  
2 in the afternoon who have been delegated, let us say, to give  
3 these problems special consideration.

4 DR. MARGULIES: Okay. If that is acceptable we  
5 will function that way.

6 Thank you very much.

7 DR. PAHL: We have four applications, two special  
8 actions, and some information-only items, and it is a quarter  
9 of twelve. I think it would be something of a disservice,  
10 unless we run through without lunch, to try to review these  
11 regions by 12:30, quarter of one, as people start to depart  
12 for planes.

13 I would like to get council's feeling.

14 Should we perhaps, take up one or two applications  
15 and then break for lunch, and return to the business, or do you  
16 want to run through --

17 DR. BRENNAN: Go right through.

18 MRS. MORGAN: Go right through.

19 DR. PAHL: Okay.

20 Let us take up the application from Nebraska.

21 Mr. Milliken is the primary reviewer, Mrs. Wyckoff,  
22 the backup reviewer, Mr. Zizlavsky, our staff.

23 MR. MILLIKEN: I will do this quickly and painlessly  
24 as possible. You have, in your books, the blue sheet of the  
25 recommendations, specific recommendations which you have read.

1 I would recommend that you turn to the yellow brief-  
2 ing document, page eleven, the very last page which outlines  
3 the outstanding accomplishments by RMP since April 1, and 2, '71;  
4 principal problems; and other issues, to save time of going all  
5 through this, you can read these more quickly than I can read  
6 them to you.

7 While you are looking at that, I will give ~~more~~  
8 detail as a result of the visit. The purpose of this visit  
9 was to assess the progress achieved by the Nebraska RMP, and  
10 responding to past criticisms. The concerns and recommendations  
11 for action are to improve the effectiveness of the Nebraska  
12 RMP, and based upon the April, '71 site visit, and subsequent  
13 reviews by committee and council; the eight specific issues  
14 in the advice letter are as follows:

15 One, need for stronger and more effective central  
16 program direction, the site visit team found that much progress  
17 had been made regarding this issue, that the -- Dr. Mosey, the  
18 coordinator has provided strong leadership, particularly in  
19 the short time he has been in the position, and the particular  
20 constraints that he is operating under.

21 Part of this problem, I believe is related to the  
22 action the council took yesterday on the new position statement  
23 of relationship between the RAG, the grantee, and the coordina-  
24 tor. So, I think this will be helped greatly by that action,  
25 but he has been operating under considerable pressure as a

1 result of lack of clarification of that relationship, as most  
2 everybody knows the grantee is the state medical --

3 Issue Number Two; the role of the RAG should be  
4 strengthened and the RAG should have a strong role in selection  
5 of the program coordinator. This too, is related to the action  
6 taken yesterday. The RAG is playing an active role in setting  
7 program policies through the work of its five committees:  
8 Executive Committee, Nominating, Budget, Finance Review,  
9 Resource and Development, and Operations Review.

10 One of the concerns of the site visit team was that  
11 there did not seem to be any requirement that the Executive  
12 Committee should report back to the RAG to get some sort  
13 of an agreement or support from the RAG for the action they  
14 took between meetings of the RAG; and the site visit team speci-  
15 fically recommended that this be built into the future procedure;  
16 that the Executive Committee was responsible to the RAG and  
17 should act for their actions related to RAG policy.

18 There was a lot of discussion about this, but  
19 there seemed to be willingness to do this. There was not great  
20 objection.

21 The third issue, the following documents should be  
22 developed and officially adopted by RAG, mechanism of appoint-  
23 ment committees, objectives of each committee, procedures for  
24 reallocation of funds, procedures for remonitoring projects,  
25 procedures for project review, and procedures for project

1 termination.

2           The team felt that an excellent job has been done and  
3 beginning to develop these necessary documents. They were worked  
4 out, they were specific, they were discussed, and in the saving  
5 of time, it was the feeling that periodic progress and financial  
6 reports required by the project directors in line with what  
7 they have set up will follow the specific procedures.

8           The fourth issue, the role of the grantee organiz-  
9 ation should be defined in a way which will delineate the manner  
10 in which its responsibilities and authorities are separate from  
11 those of the regional advisory group. That was discussed in  
12 great detail and it was the feeling of the site visit team  
13 that this will be worked out and made more specific and that in  
14 the future, the particular relationship of the grantee will  
15 be to advise on their recommendations on legal -- meeting the  
16 legal requirements based on the recommendations of the RAG  
17 for program development, and not the reverse.

18           We had no proof that the reverse was happening, but  
19 there was no proof that it could not which made us concerned.

20           The fifth issue; capability of already available  
21 utilities on resource staff should be more effectively utilized.  
22 Dr. Borne, management consultant, described a new organizational  
23 chart and gave rationalization of, and the duties of each  
24 position.

25           There was some discussion of whether staff could be

1 put out in various areas of the state, and Dr. Massey felt  
2 that at the present time, in their recouping from more central-  
3 ized management, this would be a very serious problem and that  
4 it should be -- remain central which the site visit team agreed  
5 with.

6 Sixth; available issues should be utilized more  
7 effectively in defining needs and caring for project operation.  
8 The most systematic identification of regional needs was the  
9 1968 survey conducted throughout the state. Additional infor-  
10 mation has been supplied by program staff consultants through  
11 initiation of acting profiles.

12 Since that time and since the -- in the last six  
13 months, the great improvement under the new coordinator of  
14 relationships with the A Agency in CHP, it was apparent that  
15 a closer, ongoing relationship, utilizing the studies that  
16 have been funded, the State Health Department is now far more  
17 active in the RMP activities.

18 They and the state medical, and RMP, have access to  
19 some studies that have been done on providing special data to  
20 document needs, health needs of people and it was the feeling  
21 of the site visit team that this could be a very exciting  
22 cooperative adventure, wherein local state and Federal data  
23 could be made available to document and identify some needs,  
24 particularly of Minority groups which in the past have not  
25 been identified effectively, and this could then be used by the

ter-6

1 RAG and by the committees in setting up their goals and  
2 objectives, and activities for their basic plan and this would  
3 bring together, a relationship that could be a model for the  
4 country in terms of this kind of cooperative focus, and to this  
5 end, their EMS development is very exciting, because the C~~H~~  
6 and the RMP have agreed to backstop and provide the systems  
7 necessary to the role of the State Health Department in  
8 their continuation of developing a statewide EMS structure and  
9 activity.

10 Now this could -- this could be very helpful because  
11 the data needed for EMS documentation and development could  
12 then be a part of the total data, to document needs of people  
13 as related to other kinds of health care systems.

End #11

14 This is an example.  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24

mil-1

1           Seven. There should be organized plans for facing  
2 worthwhile projects to funding mechanisms other than RMP.  
3 This was not a popular item for discussion. The team pushed  
4 it rather vigorously. We, at the end, indicated that we  
5 were not expecting the impossible, that we realized the lack  
6 of resources in that state was such that it was not possible  
7 to quickly and effectively build in immediate other sources  
8 of transfer of funding. However, we did push and we -- I  
9 felt -- got some very cooperative reactions that they could  
10 begin to build into their project design ways and means of  
11 gradually transferring funding from RMP to other sources,  
12 federal, state, and local, and this was agreed that this would  
13 be done.

14           Eight. There should be strong involvement of pro-  
15 gram staff in RAG in directing the course of the Mobile  
16 Cancer Program. Dr. Marzee and RAG have had strong involve-  
17 ment, we found, in directing the course of the Mobile Cancer  
18 Project. An ad hoc group composed of RAG and other consult-  
19 ants completed the site visit and reported the findings to  
20 the RMPS site visit team.

21           Now, in addition to these eight issues, there was  
22 discussion about the general goals and objectives and  
23 priorities, accomplishments, and implementation, continued  
24 support, minority interest; in regard to the minority interest  
25 the region expressed the willingness to accept recruiting

mil-2

1 assistance from RMPS, in addition to obtaining additionalRM.

2 Minority people. We would like to see this kept  
3 visible in terms of whatever communications go back in terms  
4 of it, of this council, so that this would be followed through  
5 on.

6 Coordinator was evaluated, and we feel they now  
7 have a very strong, capable person. Site visitors noted the  
8 program staff needs to provide more time to strengthen content  
9 and development, which reflect RMP goals and objectives and  
10 priorities. It was our further feeling in this regard that  
11 somebody on the staff should be given this specific  
12 responsibility in addition to what is now the rule.

13 The regional advisory group, a number of key health  
14 interest institutions are represented on the 36-member RAG.  
15 Ten are specified as having the required membership and the  
16 additional 26 at-large members represent geographical and other  
17 health care interest. Fourteen, 39 percent are physicians.  
18 The RAG is generally dominated with political interests  
19 represented by the Governor and the State Senator. Only two  
20 or three members can be identified as representing a --

21 A site visit is recommended that the membership  
22 be broadened to include more minority representation.

23 The bylaws should reflect this process. This was  
24 agreed to. But generally, I think it needs to be visible  
25 in future communications.

mil-3

1 We spent a lot of time on the grantee organizations  
 2 and we received cooperation in the fact that the statement  
 3 that they have in their program, the coordinator shall be  
 4 responsible to the governing body of the state grant  
 5 institution, state medical society, resulted in a site visitor's  
 6 suggestion that the responsibility of the coordinator to the  
 7 RAG should be more explicitly stated in coordinators section,  
 8 but again this needs to be --

9 I think staff can give them some special help in  
 10 terms of the regulation passed yesterday.

11 We talked about participation and local planning.  
 12 This is where we encouraged them and complimented them on their  
 13 working relationship with the CHP. We -- staff did an excel-  
 14 lent job for us in getting an evening meeting set up when there  
 15 wasn't time for it, but it was worked into the meeting where  
 16 the site visit team met with the director and chairman of the  
 17 state advisory council of the CHP, along with the coordinator  
 18 and the chairman of the RAG. This was of very effective and  
 19 worthwhile activity which brought out this future potential.

20 Under evaluation, the recommended actions of the  
 21 team for the evaluation aspects of projects have improved  
 22 significantly since the previous site visit, but the program  
 23 should provide additional manpower to further strengthen the  
 24 evaluation component of new as well as ongoing projects.

25 Again this goes back to the other point that someone on staff

mil-4

1 should be designated the specific responsibilities.

2 Well, the next particular of special recommended  
3 action was on utilization, manpower and facilities and the  
4 recommended action on this is that the region needs to more  
5 actively seek out and assist in planning for under-served  
6 areas of population. There is minimal attention to manpower  
7 utilization at this time and this needs to be corrected.

8 In summary, I would say that the conclusion of the  
9 visit team shared their impression of the region status and  
10 what further needs to be done to strengthen the program. We  
11 feel they have demonstrated substantial progress and adequately  
12 responded to all eight specific issues. We feel that there is  
13 still room for progress in some of these areas as I have  
14 indicated specifically. The relationship between the coordinator  
15 and the deputy fiscal administrator needs to be clarified  
16 so the coordinator's role in fiscal management is clear.  
17 That can be part of this other thing. The region should  
18 devote more effort to identification of needs which goes back  
19 to the data sharing project that I referred to. The state CHP  
20 survey results, the Westinghouse report, which is part of that,  
21 should substantially aid this. Evaluation of project needs  
22 strengthening and RMPS staff, they need help in that. The  
23 region needs to understand the interrelationships between  
24 facilities, services, and manpower in terms of collective  
25 impact.

mil-5

1 I would move that the council approve the  
2 following four specific recommendations: the funding level of  
3 \$725,000 for the 02 year, and a tentative recommendation of  
4 \$700,000 recommendation for the 03 year; that the region utilize  
5 the \$25,000 above the requested program staff budget for  
6 initiating small planning and feasibility studies which result  
7 in short-term pay-offs; there has been a reluctance to do that.  
8 There has not been a tendency to do this. Three, disapproval  
9 of the two kidney disease activities which I will not go into  
10 because these have been well-discussed before. Team recommends  
11 that the region needs to develop a statewide kidney plan,  
12 approach, in order to get this back on the track and that  
13 the region be given the option of submitting a triennial  
14 application next year.

15 MRS. WYCKOFF: I second the motion.

16 DR. PAHL: Thank you very much. The motion has  
17 been made and seconded to accept the review committee's  
18 recommendations. Is there further discussion from council  
19 or staff? If not, all in favor of the motion, please say aye.

20 (Chorus of ayes.)

21 DR. PAHL: Opposed?

22 (No response.)

23 DR. PAHL: Motion carried.

24 I would like to turn now to the application from

25 Oklahoma with Dr. Komaroff as the council reviewer and

mil-6

1 Mr. Says as our staff representative.

2 DR. KOMAROFF: Oklahoma began planning in 1967  
3 and became operational in 1969. Last year they came before  
4 the council requesting triennial approval which was denied,  
5 and the site visit subsequently went out in July last year  
6 recommending further that they not apply for triennial status  
7 until next year and come back with a one-year application, which  
8 they have done this year. The concerns of the site visit last  
9 July focused on several issues. The primary concern was with  
10 the capability of the coordinator and the turn-over and subse-  
11 quent mediocre quality of some of the staff. And a fact that  
12 a very powerful number two man, a very effective number two  
13 man, Mr. Hardin, had been lost to the program and no  
14 replacement for him really was apparent.

15 Also, there was concern over the very restricted  
16 focus on RMP as a continuing education tool, primarily, with  
17 no execution, in fact, of support of experimental in health  
18 care delivery.

19 Also, there appeared to be poor relationship to  
20 other related federal agencies and a mediocre RAG involvement.  
21 Now on the basis of those criticisms, the region called its  
22 own site visit composed of -- chaired by their local VA  
23 hospital administrator, and including members of other regional  
24 medical program staffs and advisory groups. That site visit  
25 concurred largely with the RMPS site visit in its criticisms.

mil-7

1           As consequence, I won't belabor it, the region has  
2 come back this year with a much improved application in every  
3 respect that I have just described. With the exception that  
4 although the coordinator has resigned and there is no replace-  
5 ment yet appointed, there is still no very strong official  
6 number two man, although an effective new planner who happens  
7 to be a veterinarian has come in and apparently is a very  
8 dynamic figure on the order of Mr. Hardin, who had previously  
9 been there. There continues to be a large turn-over of  
10 staff, and an uncertain strength to the involvement of the RAG.  
11 On the basis of the other improvements, the recommendations  
12 of the review committee was that their region's current level  
13 of \$739,000 be increased to \$839,000. This is less than the  
14 \$1.5 million which was requested, most of which went to a  
15 large number of new projects.

16           The review committee further recommended that the  
17 region recruit a strong coordinator, strengthen the advisory  
18 group, encourage subregionalization and that relationships  
19 with CHP.

20           I would move recommendation of their funding level  
21 and specific recommendations. We will be seeing them for a  
22 triennial award and site visit next year. I would further  
23 emphasize that they continue the initial experimentation  
24 with health care delivery issues, which is apparent for the  
25 first time in this year's grant.

DR. PAHL: Thank you, Tony.

Motion has been made and seconded to accept the report of the review committee. Further discussion from council?

End 12

Mr. Says, do you have any comment to make?

cr 6500 #13  
mml DD

1 MR. SAYS: I have nothing to add except that you  
2 might be interested to know that they have interviewed three  
3 candidates for the job so far, two of whom were Ph.D. types and  
4 one physician. I believe they will be interviewing another  
5 physician relatively soon.

6 In the event that they find a suitable candidate, if  
7 there is some hangup in what time they might come on board,  
8 Dr. Kelly West, who was the coordinator during the planning  
9 phase, has agreed to serve as the acting director.

10 DR. PAHL: Thank you very much.

11 If there is no further discussion on the application,  
12 all those in favor of the motion say aye.

13 (Chorus of ayes.)

14 DR. PAHL: Opposed?

15 (No response.)

16 DR. PAHL: Motion carried.

17 May we now turn to the Oregon application with

XXXXXX

18 Dr. McPhedran as principal reviewer, Dr. Watkins as backup  
19 reviewer, and Mr. Moore from our staff.

20 DR. MC PHEDRAN: The Oregon requests triennial status  
21 and the region was site visited in April -- no -- I am sorry--  
22 March. I have the date right here.

23 All the site visitors agreed and the review committee  
24 concurs that this is a very good regional medical program and I  
25 recommend the approval of the committee's -- I recommend the

mm2

1 review committee's recommendations -- the review committee in  
2 fact took the site visit report and concurred with it.

3           The new directions of the program are very new and  
4 they have really not been thoroughly explored by the staff and  
5 I will go into that a little further.

6           That is one difficulty perhaps with the -- with  
7 their new directions, that they really don't know exactly how to  
8 pursue them, but I think that they have made very intelligent  
9 suggestions about how to organize themselves.

10           Their salary scale is a problem in that they need to  
11 expand staff but they are tied to a rather low salary scale  
12 of the Oregon State Medical School. This is really quite a  
13 significant problem.

14           We were impressed with the staff that they had,  
15 including one man that they had pirated from the Kansas Regional  
16 Medical Program who was a very effective worker in -- all over  
17 the state, even the spartan surroundings of the offices seemed  
18 to -- gave us a good impression. I wonder if that is because of  
19 my Calvinist upbringing that I felt that way about it.

20           (Laughter.)

21           The most notable accomplishments are the establishment  
22 of this good staff and good cooperative arrangements and relation-  
23 ships with practicing physicians with the Oregon State Medical  
24 School, although the salary scale is a problem.

          Other than that, the grantee institution seems to

mm3

1 perform very well. They have had very good programs in  
2 sponsoring coronary care unit training and stroke rehabilitation.

3 Their performance under previously accepted goals and  
4 objectives, et cetera, has been very good. They have an  
5 excellent record of getting continued support for projects  
6 from other sources when their own support is ending. This  
7 is true of a number of continuing education activities which  
8 have now been discontinued.

9 We had a little concern about the -- what appeared  
10 to be under-representation of minority interests especially  
11 from the cities in the northern part of the Klamath Valley,  
12 all through the Klamath Valley, which is the populous part of  
13 the state, but we have every reason to believe that they are  
14 working on that.

15 Commenting about processes, the coordinator is an  
16 outstanding man. He is -- he was in rural practice in  
17 Washington State for a number of years. He seems to be really  
18 quite well informed about many things that a regional medical  
19 program needs to be doing in that part of the country. He  
20 needs a deputy and it sounds as though the person who would be  
21 hired for what they call a needs assessment unit, would be  
22 the logical person for this. He could do both activities.

23 The regional advisory group members, several  
24 attended this site visit and one or two stayed for a good time  
25 and it appeared that they are active in working with the program

mm4

1 staff so that we had a very good impression of the interests,  
2 sustained interests on the part of the regional advisory group.

3           The management of the funds, as I said, by the program  
4 staff and also by the grantee institution, seems to be above  
5 reproach.

6           The program proposal is certainly in line with the  
7 new mission's statement and we come now to the matter of funds  
8 that they propose that they would like to have obtained. Their  
9 current level is \$746,000, direct costs. Their requests for  
10 the three years -- I beg your pardon -- totalled at -- I am  
11 sorry, I don't have the figure really right here. I will come  
12 back to that in just a moment.

13           On the front of the yellow sheet it is broken down  
14 and I think that is the most useful way to look at it. Their  
15 request -- the request that we saw fitting were for the six-  
16 year, about \$921,000 which would cover the costs for Core-  
17 one project beyond the approved -- one within the approved period  
18 of support, five new projects, and then for the seventh and  
19 eighth years 1.038 and 1.008 million dollars respectively.

20           Now, the seventh and eighth year proposal includes  
21 both the developmental component of 75,000 in the second, and  
22 100,000 in the third, the different figure being based on the  
23 expected increase in total program expenditure if we will  
24 allow it.

25           The growth funds, so called, are at first sight --

mm5

1 look very much like an enormous developmental component, but the  
2 site visit team was persuaded and the review committee also was  
3 persuaded of the difference.

4 Both funds that we thought were reasonable and sup-  
5 portable were -- a patient transportation system, especially  
6 within Portland to help in the development of a peer review  
7 system which has already been well started, will be th rough  
8 the work of the Oregon State Medical Program; and to do an --  
9 what is called a patient origin study.

10 They had a very effective and useful study of where  
11 patients came from, various hospitals around the state, which  
12 was enormously helpful in planning to hospitals and state health  
13 authorities, and they want to expand that, extend it.

14 These were sort of projects that were in the  
15 planning stage that we wanted to propose. They also proposed  
16 some things the site visitors thought would be beyond their  
17 capacity with the -- even if they could enlarge their program  
18 staff which is now numbering only six, professional staff,  
19 which they hope to enlarge soon to ten.

20 We thought that their proposed expenditure of  
21 growth funds on a demonstration family practice clinic, on a  
22 demonstration of primary entrance clinic, on a television  
23 communication system, and a feasibility of study and development  
24 health centers would really be beyond their capacity and we  
25 hope we persuaded them. We hope that they will be persuaded

mm6 1 that is true.

2           So what we are then recommending then is that for the  
3 05 year, first of all, they should be on triennial status.  
4 For the 05 year that their total award would be \$921,000, that  
5 there would be no developmental component. They did not request  
6 any, thought they would not be ready for it, and that there  
7 would be none of these growth funds in the first year, but  
8 that in the second and third year, that they would be awarded  
9 a developmental component, 75,000 each year, and that growth  
10 funds of \$250,000 be provided for those two years, which  
11 would cover, by their own estimate, the costs of the patient  
12 transportation system development and the computer review system  
13 development and the patient orientation study.

14           So I move that we accept, therefore, the review  
15 committee recommendations.

16           DR. PAHL: Thank you very much, Dr. McPhedran.

17           Dr. Watkins?

18           DR. WATKINS: Alex and I discussed this and I felt  
19 this was a very good program, so I endorse it also. Second the  
20 motion.

21           DR. PAHL: Motion made and seconded to accept the  
22 review committee's recommendations.

23           Further discussion by council or staff?

24           If not, all in favor of the motion, please say aye.

25           (Chorus of ayes.)

mm7

1

DR. PAHL: Opposed?

2

(No response.)

3

DR. PAHL: Motion carried.

19

20

21

22

23

24

2 May we now turn to the application from Puerto Rico  
3 with Dr. Brennan as principal reviewer, Mrs. Mars, as backup  
4 reviewer.

5 DR. BRENNAN: Puerto Rico's program is going into  
6 its third year, and is up for triennial -- will become eligible  
7 for triennial review, I guess next year. The group came in  
8 with a request for \$1.4 million against the current year's  
9 actual award of \$843,000, which represents about 1.8 -- a 180  
percent increase in funding.

10 The general opinion of the review group has been that  
11 this is a first line program, that there is good direction,  
12 that it is on target with respect to the stated objectives of  
13 the regional medical program.

14 The review committee has not recommended that we  
15 award this 180 percent increase in funding at this time. Among  
16 the element asked for in that large increase in funding with a  
17 considerable extent of the core staff, which would have gone  
18 from \$240,000 to \$447,000 in support.

19 Several new projects were proposed. One of them  
20 for \$82,000, another for -- another for \$181,000, and another  
21 for \$78,000, which the review committee felt were not partic-  
22 ularly creative projects.

23 The ongoing programs with which there is considerable  
24 satisfaction in terms of outreach into the community and bringing  
25 care to people who don't have it, and persons with a specific

1 problem, particular to Puerto Rico, would be well supported by  
2 the amounts of money which have been recommended by the review  
3 committee. They're given on the blue sheet, and come to a  
4 total for the coming year of \$1.1 million with no particular  
5 provisos, some strength of the regional advisory group, some  
6 further extension of the basis of that group in terms of its  
7 geographic location.

8 I should then like to recommend acceptance of the  
9 review committee's recommendation for a \$1.1 million authoriza-  
10 tion for third year for the Puerto Rico regional medical program.

11 DR. PAHL: Thank you. Mrs. Mars?

12 MRS. MARS: I read the program with great interest.  
13 Apparently, this new coordinator is quite a dynamic person and  
14 rather a brilliant one. I thought some of his approaches were  
15 interesting. He's very conscientious and recognizes that the  
16 role of leadership of RAG is a problem, and so he has done  
17 something that I have never heard of before.

18 He has appointed a member of his staff as an executive  
19 officer for RAG and this staff person will devote part of his  
20 time to coordinating the meetings and contacting members in  
21 an effort to encourage their increased participation.

22 RAG does seem to take an active part in the nego-  
23 tiations of the new budgets when their funds were reviewed and  
24 other than that, I don't think there was anything that espec-  
25 ially drew my attention.

dh 3

1 The nuclear medicine program was dropped, and the  
2 other thing that does seem to be interesting is that their  
3 project directors are extremely enthusiastic. In fact, excep-  
4 tionally so, and are devoting more time than they're being paid  
5 for, and willing to carry on their programs that somehow or  
6 other get funding for them if we don't fund them.

7 It seems to be a terrific togetherness and Dr. Bren-  
8 nan and I were discussing before, apparently, there is some-  
9 thing about being in a little small island that brings this and  
10 increases this togetherness.

11 So, I would like to second the motion.

12 DR. PAHL: The motion has been made and seconded to  
13 accept the review committee's recommendation. Any further  
14 discussion on this application by council?

15 MR. MILLIKEN: One of the principal problems, number  
16 four, what is the future on this?

17 MRS. MARS: Well, I think this is one of the things  
18 that he is appointing this executive to the RAG to try and get  
19 better representation. They're going to also hold meetings in  
20 other parts of the island and I think this is one of the primary  
21 reasons for this unusual step that he is taking in appointing  
22 this staff executive to the RAG to see if he can bring in  
23 better representation.

24 I think that he's extremely conscious of these things,  
25 and so I'm sure that will be taken care of.

dh 4

1 MRS. WYCKOFF: It's on the staff, the nursing and  
2 social services profession?

3 DR. CHAMPLISS: Mr. Millikan, this is a region that  
4 has for its coordinator a dentist and there have been discussions  
5 with him to bring great involvement of the allied health pro-  
6 fession on his staff, and I think we will see a positive re-  
7 sponse.

8 MRS. MARS: I'm sorry. You were talking about staff.  
9 I misunderstood your question. I'm sorry.

10 DR. PAHL: Further discussion on the application?

11 If not, all in favor of the motion please say aye.

12 (Chorus of ayes.)

13 Opposed?

14 (No answer.)

15 Motion carried.

16 DR. PAHL: I would like to direct your attention next  
17 to the first green tab in the binder under which there are five  
18 applications for your information, only unless one or more of  
19 you would like to take these up for special consideration.

20 These are the applications from Kansas, mountain  
21 states, North Carolina, South Carolina, and Western Pennsylvania.  
22 These are all applications within the triennial period and they  
23 have been reviewed and the results of that review reported upon  
24 here by our staff and advisory review panel, and under the  
25 review procedures which have been following, since there are

1 no particular questions which the director has about these  
2 applications, unless you wish to bring up something for special  
3 consideration, this is for your information only, and no action  
4 is required by the council.

5 If there is no particular point about these, then  
6 the chair understands that these are read and understood by the  
7 council and we can proceed to the last section of the book, the  
8 second green tab, which is special actions and under that tab  
9 are two actions, one of which was taken up yesterday, the Col-  
10 orado Wyoming special action, in which the council approved  
11 level was raised in a special vote and so we only have the  
12 white paper which has to do with the Mississippi Kidney proposal,  
13 and I would like to have Dr. Hinman, if you would please, present  
14 this to the council and have you take action on this.

15 DR. HINMAN: This represents a supplemental application  
16 by the Mississippi RMP for funds to support their state-wide  
17 kidney treatment program. It's a three-part application, the  
18 first part being a comprehensive training program. The second  
19 part, a centralized dialysis home treatment program, and the  
20 third part, a kidney transplant program.

21 Parts one and two were approved previously by this  
22 council and unfunded last summer because of various cuts in  
23 budget sustained centrally and locally. They're unchanged, and  
24 the region has requested that we fund them at this time.

25 The third part, the organ procurement and transplanta-

dh 6

1 tion program is a well thought out program to provide the fac-  
2 ilities and the resources to develop an organ procurement system  
3 throughout the state that would allow the transplantation of at  
4 least 25 patients of renal diseases during the next year.

5 The program is a coordinated program. They have  
6 divided the state into 14 subregions and have worked with in-  
7 dividual physicians and administrators in each of these regions  
8 so they have a functioning referral system into Jackson and out  
9 of Jackson so there is output for patients as long as they have  
10 the home dialysis facilities, and the transplantation facilities.

11 The entire program has had technical review by  
12 committees set up locally who recommended its approval, and has  
13 been reviewed by the staff review process and approval is rec-  
14 ommended in the total amount, including all three parts of  
15 \$183,634 direct costs for the first year, \$161,915 for the sec-  
16 ond year, and \$120,403 for the third year.

17 DR. PAHL: Is there any discussion by the council  
18 with regard to these matters?

19 Dr. Merrill?

20 DR. MERRILL: I looked this over, and Dr. Hinman has  
21 pointed out the basic fundamental problems involved, how they  
22 approach them, and I would agree in general with his analysis.  
23 They have been cited, and in a letter from Dr. Bower, there are  
24 a number of statements in relation to his agreement with the  
25 site visitors recommendations, and his proposal concurs with

1 them. One of the statements is so remarkable, I think I ought  
2 to read it to you. He points out in the letter in the equipment  
3 category, we agree with the deletion of the majority of the  
4 equipment and feel that the project will not be hampered sig-  
5 nificantly by the deletion which although tear-stained, is one  
6 of the most remarkable letters I have ever read.

7           Nevertheless, it's a good program. It's based upon  
8 a number of functioning programs at the present time, but it  
9 does have, I think, two defects. One is although the funding  
10 plans are well outlined, I'm not, myself, sure how easy it will  
11 be to complement these and these are major problems.

12           Let me give you one example: Although it is -- plans  
13 are made for operating room time for the harvesting of kidneys,  
14 no plans are made or spoken of for the professional fees for  
15 these things. Unless they intend to do it themselves, which I  
16 think would probably be rather difficult for one full time, and  
17 one part time surgeon job, and the second thing which I think is  
18 even more important, they talk about an organ procurement which  
19 I would agree with is totally necessary, but they're funding  
20 him at the level of \$10,000 a year.

21           Now such a man, to be effective, has to be at least  
22 initially an SR man who goes out and talks to the people on  
23 an experienced level, and not some high school graduate who in  
24 three weeks of crash program -- it won't work.

25           For someone with that kind of background, if he came

dh 8 1 to me and tried to tell me how to run my immunosuppressant theory  
2 would soon find himself out on the sidewalk on his "immuren."

3 (Laughter.)

4 I think it's possible for an SR person to go out there  
5 and initiate this, and then have someone who is going to work at  
6 the \$10,000 level -- but this might be written into it because  
7 it's a fundamental part of our own experience that it just  
8 doesn't work unless you have someone who is willing at a high  
9 level to go out there and talk to them as an experienced master  
end #14 10 plan surgeon, medical plan involved in the programs.

1 Is it possible before approving this to make that  
2 suggestion?

3 DR. HINMAN: I visited the program a couple of months  
4 ago, and Mr. Smith and Dr. Bowman were the first point of con-  
5 tact. The contact person is the person who makes sure the phone  
6 is ringing and the papers are appropriated. They are under no  
7 illusion that this person would be able to acquire the organs. I  
8 believe Dr. Smith plans, at least during most of the first year,  
9 to take most of the kidneys himself.

10 DR. MERRILL: If this is to be a self-supporting and  
11 phased-out program as the budget indicates, how sanguine are you  
12 about the ability of the state of Mississippi and the various  
13 agencies to carry this program out at the level of 25, and even-  
14 tually 50, transplants a year?

15 DR. HINMAN: Ordinarily I would not be at all sanguine,  
16 but Dr. Bower has been able to convince the legislature of this  
17 state that this is important enough that he has a line item in  
18 the budget to support his dialysis program, the in-center part,  
19 and it is the only state health program that has a line item in  
20 the budget.

21 I think that -- we are pinning our hopes that Dr.  
22 Bower will continue to be this effective with the state. He had  
23 been extraordinarily effective in mobilizing local resources and  
24 with the recommendation that this debt requiremental funding.  
25 If he could hold to that, it is because he has been able to

1 mobilize other resources.

2 In their planning group, and active as a -- in over-  
3 seeing the kidney project, is the head -- a physician who is the  
4 head of the local state medical assistance program, and a large  
5 percentage of the patients to date in the program have been on  
6 medical assistance because they have a high incidence of renal  
7 failure in the black population in the state of Mississippi.  
8 They have been entering them into the program.

9 DR. MERRILL: I move this be accepted and approved.

10 DR. PAHL: Motion has been made to accept the recom-  
11 mendation as stated.

12 MRS. CURRY: I second.

13 DR. PAHL: Has been seconded.

14 All in favor say aye.

15 (Chorus of ayes.)

16 DR. PAHL: Opposed?

17 (No answer.)

18 DR. PAHL: Motion is carried.

19 That concludes the formal business relative to the  
20 review of applications. I think Dr. Margulies has another item  
21 or two.

22 DR. MARGULIES: This will be very brief, but one  
23 thing I wanted particularly to thank the new members who went  
24 through this interesting two days with little preparation. The  
25 orientation we are planning for you will be even more poignant

1 than the introduction you have had. I don't want you to go away  
2 feeling you are unusually confused. The older members cloak  
3 their confusion more wisely than the newer members. There is  
4 that range of difference.

5           We have had in the last two meetings of the review  
6 committee considerable amount of expressed anxiety about the  
7 role of that committee. It is still struggling, more than is  
8 the council, with the transfer from project review to program  
9 review which is difficult in any circumstances and which does  
10 require a continuing kind of refinement. There is a need to  
11 redefine the role of review committee, counsel, staff advisory  
12 review panel and so on. We have indicated we would prepare a  
13 description of how we envisaged these relationships, what the  
14 responsibilities are, and bring this back to them and to the  
15 council so that there is a better understanding.

16           There is a certain degree of overlap in what review  
17 committee does and what council does, which most of us consider  
18 a highly desirable kind of overlap, but there are levels of  
19 authority which are different in the two groups which need to be  
20 understood fully. So, in the near future we will be transmit-  
21 ting that kind of information to you for your comment.

22           We are also going to have to take some special action  
23 involving whatever kinds of approval for grant funds we have on  
24 emergency medical activities and on the education supplementary  
25 grants because these were carried out in accordance because they

1 of high priority, of particular importance to RMP and in general  
2 There were no site visits. It is a new kind of activity in some  
3 cases or a very rapid expansion of activities in others. We  
4 will, both with staff and members of review committee and coun-  
5 sel, wherever possible, be planning some visits to become more  
6 fully acquainted with what is being proposed. We will try to  
7 make these convenient, well localized, and so on, but we will  
8 need for these special actions either for future developments or  
9 to follow whether or not it is already gone on, a better under-  
10 standing than could have been obtained by this very rapid kind  
11 of review and the supplementary awards process where they report  
12 in to the council which you had in the last two days.

13 I think that the RMP's need it, we need it, and we  
14 will set up some process for taking care of this as rapidly as  
15 possible.

16 I would like to say one other thing; one should end  
17 up on a high note. After the council has been meeting so labo-  
18 riously -- but this is not a high note. It is an illy marked  
19 point of criticism which I have to bring up while the council  
20 is here for the most part. There has been a problem in site  
21 visits, a chronic problem, which somehow has to be corrected,  
22 particularly when we are dealing with the consideration of a  
23 full triennial review. These are reviews which give some level  
24 of guarantee to a program that it will have three years of fund-  
25 ing which may involve for them and for us very large sums of

1 money. Sometimes these are conducted with members of site visit  
2 teams, either arriving late or disappearing early but continually  
3 disappearing early, and if it is not possible for a member of a  
4 site visit team to go and remain for a period of time which  
5 represents an adequate observation and an adequate report back,  
6 that should be made as clear as possible so that someone else  
7 can be obtained.

8           We are going to give ample warning at all times, but  
9 I think that no one would disagree that the release tentatively  
10 of anything from one or two million to, in some cases, twenty;  
11 twenty-two millions of dollars for a program justifies very  
12 full attention, and, of course, from the point of view of those  
13 questioning the grant awards, it is a bitter experience to find  
14 themselves ending up with a site visit they have planned for for  
15 months with not everyone there and some of the principle actors  
16 already gone. Now, this is not a big problem, but if it happens  
17 once or twice, it is a big problem. I am sure you appreciate  
18 that, but we would rather know if it can't be done, and early,  
19 than to have someone intend to carry out the full activity and  
20 not do it.

21           The report back in, as you can see from the experience  
22 we have had here to the council, is of tremendous importance.  
23 The reviews which the review committee carries out are critical,  
24 involved, detailed, and I think the combination works out very  
25 effectively. We will carry out the kind of subcommittee

1 activity which we had indicated during the course of the morning,  
2 It is an election year. There will be new legislation; there  
3 will be new appropriations actions, and we will try to keep you  
4 as current as possible. The best I can tell you right now is  
5 that there is a 75 percent turn out in the California primary.  
6 That is of about 20 minutes ago, and that is the most recent  
7 information I can give you. I will try to keep you up-to-date  
8 as well as possible.

9 Thank you very much.

10 DR. PAHL: I have just two small points before I  
11 guess we are officially adjourned. I thought you were working  
12 upstairs, and he was listening to the primaries.

13 (Laughter.)

14 DR. MARGULIES: I was watching it.

15 DR. PAHL: First, if the new members of council do  
16 have a few minutes before they could depart for their planes,  
17 perhaps they could meet with Mr. Baum and try to see what tenta-  
18 tive schedules we could establish prior to the next council  
19 meeting for an orientation session. It would be easier when you  
20 are here.

21 The other thing is I would like to just note in addi-  
22 tion to wanting to also thank the council for going through  
23 something of a difficult two-day period, I would like to thank  
24 particularly our own staff. The mechanics of this meeting have  
25 been unusually difficult and -- in terms of getting materials

1 ready, in terms of smaller meeting room, and the arrangements  
2 for getting people in and out. I think this has been done in a  
3 relatively unobtrusive fashion and very smoothly. I want to  
4 thank the staff for that.

5           Specifically, also I would like to thank Mr. Handle  
6 for making the arrangements for last night's social occasion  
7 which most of you were able to attend and which I think was very  
8 pleasant.

9           Now I think we can officially adjourn.

10           Thank you again. Have a nice summer.

11           (Whereupon, at 12:50 p.m., the meeting was adjourned.)
