Title: Alternate Threshold for Low Annual Reportable Amounts, Toxic Chemical Release Reporting.

Abstract: EPCRA section 313 requires certain facilities manufacturing, processing or otherwise using certain toxic chemicals in excess of specified threshold quantities to report their environmental releases of such chemicals annually. Each such facility must file a separate report for each such chemical. In accordance with the authority in EPCRA, EPA has established an alternate threshold for those facilities with low amounts of a listed toxic chemical in wastes. A facility that otherwise meets the current reporting thresholds but estimates that the total amount of the chemical in production-related waste does not exceed 500 pounds per year, and that the chemical was manufactured, processed or otherwise used in an amount not exceeding 1 million pounds during the reporting year, can take advantage of reporting under the alternate threshold option for that chemical for that reporting year.

Each qualifying facility that chooses to apply the revised threshold must file the Form A (EPA Form 9350-2) in lieu of a complete TRI reporting Form R (EPA Form 9350-1). In submitting the Form A, the facility certifies that the sum of the amount of each EPCRA section 313 chemical or chemicals did not exceed 500 pounds in total production-related waste for the reporting year, and that each chemical was manufactured, processed or otherwise used in an amount not exceeding 1 million pounds during the reporting year. EPA estimates that using the alternate threshold may save reporting facilities up to 487,000 hours, with a dollar value of \$29 million, compared to the cost of reporting on Form R.

The primary function served by the submission of the Form A is to satisfy

the statutory requirement to maintain reporting on a substantial majority of releases for all listed toxic chemicals. Without the Form A, users of TRI data would not have access to any information on these chemicals. The Form A may also serve as a de facto range report, which may be useful to any party interested in amounts being handled at a particular facility or for broader statistical purposes. Additionally, the Form A provides compliance monitoring for enforcement programs and other interested parties with a means to track chemical management activities and verify overall compliance with the rule.

Responses to this collection of information are mandatory (see 40 CFR Part 372) and facilities subject to reporting must either submit a Form A or a Form R.

Burden Statement: The annual public reporting burden for this collection of information is estimated to average 67.8 hour per response for an estimated 13,157 respondents making one or more submissions of information. These estimates include the time needed to review instructions; develop, acquire, install and utilize technology and systems for the purposes of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. No person is required to respond to a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for these regulations are displayed in 40 CFR Part 9.

Respondents/Affected Entities: Entities potentially affected by this action are those chemical facilities that manufacture, process or otherwise use certain toxic chemicals listed on the Toxic Release Inventory (TRI) and which are required, under section 313 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA), to report annually to EPA their environmental releases of such chemicals.

Estimated No. of Respondents: 13,157.

Estimated Total Annual Burden on Respondents: 909,392 hours.

Frequency of Collection: Annual.

Changes in Burden Estimates: There is a decrease of about 82,000 hours in

the total estimated respondent burden as compared with that identified in the information collection request most recently approved by OMB, from 991,301 hours currently to an estimated 909,392 hours. This reflects downward adjustments made in calculating the number of eligible respondents and responses based on TRI reporting data from the 1996 reporting year (the most recent TRI data available). In addition EPA has modified the Form A to permit respondents to make multiple certifications on a single form, with an accompanying change in the number of estimated responses, producing another downward change in the burden on respondents.

According to the procedures prescribed in 5 CFR 1320.12, EPA has submitted this ICR to OMB for review and approval. Any comments related to the renewal of this ICR should be submitted within 30 days of this notice, as described above.

Dated: July 16, 1998.

Acting Director, Regulatory Information Division.
